Of the Minutemen who have started at least 10 games or more this season, five of them have fielding percentages of at least .950 or better. Senior outfielder Kyle Multner and sophomore outfielders Rich Graef and Anthony Serino highlight the group with error-free ball so far this season.

When those stats are coupled with the fact that every ballplayer goes out onto the field with "energetic and focused mindsets," Stone feels that each game has the makings of ending up as another tally in the win column.

"I want us to play well, because if we play well, we have a very good chance of winning day-in and day-out," said Stone. "It is really as simple as that."

David Martin can be reached at dmmartin@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

One Minutemen goes for a hit in a game last season. Co-captains Eric Fredette and Kyle Multner haven't found much luck in the batters back this season, and are finding trouble in offensive production.

Multner, Fredette show slow start to offensive production

JEFF BERNSTEIN/COLLEGIAN

Senior Matt Gedman returns home during a game last season. Gedman and the rest of the Minutemen will head to Connecticut to take on the Huskies on Wednesday.

By Scott Cournoyer
Collegian Staff

Co-captains Eric Fredette and Kyle Multner are two key cogs in the Massachusetts baseball team's lineup that are expected to help carry the offense, given their track records. However, the duo has not started off that way the Minutemen quite expected when it comes inside the batter's box.

The issues with Fredette and Multner are less about their mechanics and more about the faults of the game of baseball itself. Their ability to perform well isn't necessarily the way they are competing and setting themselves up for pitches, but rather something entirely related to America's past time.

It's not their timing, nor their difficulty to adjusting to pitchers either. Rather, it's what UMass coach Mike Stone calls, "just part of the game of baseball."

"Sometimes in this game, you can be doing everything right, and never see the results you're looking for," said Stone. "There are a lot of variables, and some-

UM smoking days may be numbered

Faculty senate will vote today on UM smoking ban proposal

By Matthew M. Robare
Collegian Staff

A University of Massachusetts Faculty Senate proposal that would ban the use of tobacco products on campus will be voted on this afternoon, but several students say that their ardent feelings on cigarettes won't be quenched so easily.

Last night, a motion recommending that Chancellor Robert Holub not enforce the faculty policy until the Student Government Association and Graduate Student Senate endorse it, "passed overwhelmingly," according to commuter Sen. Dan Stratford.

The Faculty Senate proposal, called "A Tobacco-Free UMass Amherst: Policy and Implementation Plan" which was proposed by microbiology Professor Wilmore Webley, would ban tobacco use entirely, effective July 1, 2013.

"For the purpose of this policy, 'tobacco' refers to any and all tobacco products, whether inhaled or ingested, as well as electronic cigarettes," the policy declared. The policy would cover the entire campus, including vehicles, parking lots and any land owned by the University.

Mitch Fleischman, a junior political science major, created a Facebook event called "Prevent banning smoking on campus at UMass" soon after learning about the proposed ban. As of 6:30 p.m. yesterday, almost 300 people had added their support.

"I oppose it because it's not an issue of smoking than it is people sitting around who don't know me, who aren't familiar with me in any way making a decision for me, people deliberating in some sort of bureaucratic process that essentially infringes upon my rights," said Fleischman.

Webley disagreed with Fleischman's sentiment.

"No rights are being violated," he said. "There are no federal or state laws saying you have a right to smoke."

"If someone lights a cigarette in Somalia eventually I'll feel those effects," Fleischman said. "The carbon dioxide and chemicals will eventually circulate the globe because of wind patterns. Second-hand smoke is something I've also heard about and I won't dispute the results or evidence of the effects of second-hand smoke on people inside; or where the parents smoke and the kids eventually get lung cancer because of it – I don't dispute that, either. But that's inside a building, where smoking is already banned in Massachusetts. But outside is a different thing."

According to a 2006 United States Surgeon General's report called "The Health Consequences of Involuntary Exposure to Tobacco Smoke," which Webley cited, about 49,000 deaths occurred in 2005 because of second-hand smoke.

"This policy needs to be adopted," Webley said. "Ninety percent of lung cancer cases are caused by smoking and one tenth of the adult population globally has a smoking related disease."

"If someone wants to go chew tobacco and get mouth cancer, it's not my problem" Fleischman said. "That's their own prerogative.

"They could have been more open about it," Fleischman continued. "I went to the UMass Faculty Senate's website and they don't even list the bill that they're voting on in its entirety . There's nothing listed on the Faculty Senate's website, no documents. There's something very similar to it that has to do with something similar proposed for 2003–2004, I think."

"The Health Council is not in the shadows," Webley said. "Some people are activists. They jump on it and don't do their due diligence."

"There are students on the Health Council," said Emie May, a music professor and secretary of the Faculty Senate. "There are representatives from all the campus unions."

"We actually knew about the proposal in its infant stages for a couple of weeks," Stratford said yesterday evening. "But it was only after the Faculty Senate Health Council passed it overwhelmingly that [the SGA] decided to do something about it. It's only really coming to a head tonight."

"We have publicized it - in the agendas of the meetings of the Health Council and press releases," May said of the proposal. "[The meetings] are

SGA votes to tell chancellor to delay policy deliberation

By Ashley Berger
Collegian Staff

Student Government Association members have approved a motion to send a recommendation to the Chancellor asking him not to approve any smoke-free or tobacco-free policy until it is approved by both the SGA and the Graduate Student Senate (GSS).

"The faculty senate is trying to ban smoking tobacco and chewing smokeless tobacco on campus," said Sen. Jarred Rose, a co-sponsor of the motion, at yesterday's SGA meeting. Rose explained that the motion delays a potential smoke-free campus policy until a time when students feel that it is necessary to implement.

Rose said that the SGA was not necessarily opposed to the policy, only that it was being pushed through too fast.

"We're not trying to ask the chancellor to reject policy, but rather to wait to make a decision on it until he gets more information from the SGA and GSS," he said.

"The Faculty Senate hasn't had any type of open communication or forum with us, which is disappointing," Rose continued. "If the SGA tried to do anything like this we'd have lots of opposition; everyone would be trying to stop us. This just seems like it's coming from very closed doors."

The motion's co-sponsor Sen. Josh Davidson, a smoker, explained his concern was not about the act of smoking, but about the Faculty Senate infringing on his rights.

"Anyone can smoke anywhere else outside," he said. "This wouldn't be such an issue if they were just telling me that I had to smoke 50 feet away from a building instead of 20. But this is more than that.

"When the faculty is telling me and other students what to do without any student consultation, then I have a problem," Davidson continued. "This is about respecting individual choices whether you agree with them or not."

Rose, though not a smoker, agreed.

"I don't personally agree with smoking but I think you should have the right to smoke if you want to," he said.

Other concerns about the policy were also addressed at the meeting.

"If you are driving [and smoking] through campus in your car on North Pleasant Street, you would be violating the policy," said Sen. Ellen Moorhouse.

Rose noted that the policy would also apply to members outside the UMass community, including parents and visitors.

Rose explained that he had heard rumors that the faculty senate was looking into implementing a smoke-free policy, but he figured it wouldn't go anywhere because there would probably be a lot of opposition.

"What is funny in this situation is that Faculty Senate didn't understand why there was so much opposition," he said.

UMass RSO will host bone marrow drive today, Friday

HANNAH VAN DE LAAR/COLLEGIAN

The UMass branch of DKMS Americas, an organization that strives to recruit bone marrow donors, will be holding a drive today and Friday – where, among other efforts, organizers will attempt to find a donor for infant Oliver Williams.

By Jessica Sacco
Collegian Staff

Get swabbed and save a life.

That's the motto the University of Massachusetts branch of DKMS Americas – a bone marrow recruitment agency – will try to hammer-in today and tomorrow during its second annual bone marrow registration drive.

DKMS Americas is one of the largest bone marrow donor organizations in the world, with an estimate of 2.6 million registered donors, according to the national organization's website. Last November, Ashley Cox, who is now the current president of the UMass branch – a registered student organization – contacted the organization in an attempt to bring a drive to the University and has been working with it since.

"DKMS registry is international and one of the few registries that is completely non-profit, where donors don't have to pay for anything," said Cox. "As college students, that's important."

This year, the UMass DKMS is endeavoring to find a successful bone marrow donor for Oliver Williams, a less-than-two-month old infant who was diagnosed with Wiskott-Aldrich syndrome – a rare disease that results in a low platelet count. Bone marrow is the tissue inside bones that essentially acts as the blood-making machinery of the body, according to Shira Simcha Nouriel, a UMass student who serves as the vice president of the University's DKMS branch.

In instances where a bone marrow transplant is needed, Nouriel said, healthy stem cells or bone marrow are taken from a donor. They are then used to create new blood for a patient whose blood-making machinery is making blood that is toxic to the body.

"Bone marrow is a huge thing," said Nouriel. "It can save so many people's lives and all you need is a match."

Volunteers will be stationed outside the Berkshire, Hampshire, Franklin and Worcester dining commons today and tomorrow to try to add as many people to the bone marrow registry as possible. This will involve filling out a registration form and swabbing the inside of one's cheek to collect cells for Human Leukocyte Antigen (HLA) tissue typing.

HLA, which are proteins found on most cells in the body, are used to determine a match. The donor and patient must have at least eight out of 10 HLA characteristics in common in order to be successful. Last year, the

High water tables will cause N.E. flooding, says UM prof.

By Katie Landeck
Collegian Staff

Just before April showers began, University of Massachusetts professor David Boutt released a study predicting that a rise in water tables due to a trend of increased precipitation could result in more flooding in the New England region.

According to Boutt, in the past 70 years New England has seen a steady increase in precipitation leading to a rise in the water table, which is where water is stored in the soil. Its rising indicated that the top of the water table is moving closer to the surface. When this happens, flooding occurs as the ground cannot absorb any more water.

"Areas that are flood-prone – such as low lying area near streams and the areas that fringe them – are going to be affected," said Boutt. "Flooding is all about probability. Let's say someone's basement floods once every 50 years … Well now with the higher water tables, it might flood every 25 years."

Boutt also noticed that unlike in previous years, New England is starting to receive more precipitation in the winter. This has also contributed to a rise in water tables as the water is absorbed directly into the ground rather than evaporating or being used by plants.

"If we get more of our annual water in the winter then we can't store as much of that water in reservoirs such as the Quabbin," said Boutt. "This will mean higher stream flows."

However, Boutt does not believe that more water is inherently a bad thing.

"I think the increase in water is good for water managers and water suppliers," said Boutt. "New England is a pretty wet part of the country but there are areas with water shortages so it is possible that more water could be useful for human consumption."

Boutt also suggests that the additional water could be contained by engineering solution such as modifying culverts, which are basins designed to store water.

Boutt came to these conclusions after studying instrumental data dating back to the 1940s from Climate Response Network, National Oceanic and Atmospheric Administration's National Climatic Data Center and the U.S. Historical Climatology Network. Kaitlyn Weider, a former UMass graduate who now works at HRP associates, processed the data so that it could be used in a meaningful way.

"I was putting in 70 hours or more of computer time a week," Weider said who looked at data for almost 100 wells, 43 temperature sites and 75 precipitation sites scattered throughout New England.

The project only used public data. However, unlike in the Midwest where drought has been a problem, very little has been done scientifically with the data, according to Weider.

"There was a whole lot of data that no one was really doing anything with," said Weider. "It's an area that is really lacking in research so there is the potential to unlock some interesting theories."

Katie Landeck can be reached at klandeck@student.umass.edu.

SMOKING from page 1

open. They're not conducted in secret. If no one pays attention then [the issues] won't be publicized. I think we provide adequate publicity."

"That's the thing," Stratford said. "As with many legislatures and committees, motions may arise within a certain committee, but that doesn't mean it's even going to pass the committee, never mind get a full vote. However, we also have to take into account that the SGA, which may be, in many ways, pervasive, is not omnipotent. It can't dispense information to and fro extensively and also, like I said, this came to a head today. I don't think many students are aware of this just by virtue of how arcane this was in its origins. Issues such as this are quick to flare up and they may die just as quickly."

On the Faculty Senate website, the listings for the pages of its various councils are on the far-right side and the Health Council's minutes haven't been updated since 2009, although the membership has changed since then and it has met twice this semester.

"With any survey the real proof of it is with the pudding, so to speak, with regards to who you survey," Stratford said. "At the same time if you look at the ads on buses they say, I think, some exuberant amount – close to 80 percent of students support police breaking up rowdy parties and that two thirds of students do not drink on campus. I would venture a guess to say that those are, in a way, inflated."

Yevin Roh, the new SGA president and a former member of the Health Council, said that the tobacco ban policy was influenced by the result of a social norms survey done by the Campus and Community Coalition to Reduce High Risk Drinking, which also did the surveys Stratford referenced. According to Roh, 56 percent of responders answered "Yes" to the question "Would you support UMass becoming tobacco free?"

He added that the survey was sent to about 2,000 students selected in a random sample and a statistically significant number of people responded.

"Not that I'm questioning the integrity of President Roh," Stratford said. "I'm just questioning the enthusiasm that many students may have for this."

Webley said that about 83 percent of college students do not smoke and that 90 percent of smokers started before they were 18. He said he was always surprised that people under 18 could get access to tobacco products.

"We wanted to be more educational," said Webley, adding that the policy proposes no fines for violators, unlike other schools.

"I'm sure the administration, if [it] adopted [the policy], could find creative ways to enforce it," Stratford also said.

The policy proposal calls for the creation of a "Tobacco-free Campus Committee" with members appointed by the chancellor with the advice of the Health Council.

"This committee will include representatives of students, staff, faculty and administrators," the policy reads. The committee will be given the responsibility of holding public meetings and provide support for people who want to stop smoking.

"I'm concerned about people who want to quit smoking," Webley said. "People aren't aware of how addictive cigarette smoking is. It's a matter of underestimating how clever tobacco companies are."

"I have serious doubts as to whether the tobacco-free policy can be enforced in a manner that's both fair and effective," Stratford said. "One of the key components of the smoke-free policy is a self-policing aspect, the efficacy of which I strongly doubt."

Fleischman said he hadn't thought about what action he planned to organize to oppose the ban.

"There's a magazine called, I think it's 'The Libertarian,' and they might actually help organize a 'smoke-in' where in a place where there's going to be a ban on smoking potentially, they bring in a bunch of smokers and they smoke on the premises."

"The Health Council has been at the forefront of policies that protect UMass students," Webley said.

The Faculty Senate meets today at 3:30 p.m. in Herter 227.

Organizers place goal at 3,600

BONE MARROW from page 1

UMass DKMS Americas registered 1,835 people, making it the largest collegiate bone marrow drive in New England. Its goal is to register another 3,600 people within the next two days.

"I can't even imagine how many lives could be saved by getting 3,600 people on the registry," said Nouriel. "It would be incredible."

While Nouriel noted that many might have apprehensions about donating marrow, she said the experience is not as frightening as some might think.

"The No. 1 reason people don't get on the registry is because they don't know about it," said Nouriel. "The No. 2 reason they don't is because of fear. We need to teach people that it's not a horrifically painful experience and it's more rewarding than you can possibly imagine."

Peripheral Blood Stem Cell Donation is the method of donation used 80 percent of the time and collects stem cells through the donor's bloodstream, according to an informational pamphlet provided by the DKMS Americas. Four to five days prior to the collection, donors receive daily injections of a synthetic protein called filgrastim to increase the number of stem cells in the bloodstream. While taking the filgrastim donors experience flu-like symptoms – such as achy joints and headaches – but side effects subside within 48 hours of donating.

During the collection, blood is removed from one arm and passed through a machine that removes the extraneous blood stem cells. Subsequently, the blood is returned through the other arm, according to the pamphlet. This non-surgical outpatient procedure takes about four to six hours over a period of one to two days.

A pelvic draw, where marrow is collected from the back of the pelvic bone, only occurs in 20 percent of cases. Donors receive general or local anesthesia during the one to two hour extraction process and are usually able to leave the hospital at the end of the day.

Side effects include bruising and stiffness for up to two weeks after donation, but within a week patients can return to their normal exercise routine, the information pamphlet states. A donor's marrow will then completely replenish itself within a few weeks.

Nouriel hopes that once people learn about the processes, they will be more inclined to join the registry.

"Think about how many times you've had an intense work out and been really sore afterwards, but known it had it be entirely worth it," she said. "Imagine [experiencing] that and saving a life."

Those who register at the drive must be from 18 to 55 years old, in general good health and weigh at least 110 pounds.

Once registered, prospective donators will be listed on the "Be The Match Registry" until the age of 61, unless they asked to be removed. Nouriel said she thinks the drive gives people a chance to potentially be heroic.

"I think everybody has at one point in time kind of day dreamed about being a hero in some way, and you can be a hero just based on your genetics," she said.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

THURSDAY, APRIL 7, 2011

"An artist must be free to choose what he does, certainly. But he must also never be afraid to do what he might choose." — Langston Hughes

EDITORIAL@DAILYCOLLEGIAN.COM

The waiting game until graduation in session

It wasn't until I was standing in a bustling club on Canal Street in Boston last weekend, with music I didn't know blaring around me, and people dancing all around

Chelsea Whitton

– that I realized that I've grown older. Speaking to seniors specifically here in Amherst, I hope somewhere along the line you've realized this or soon will. It doesn't have to be in a sketchy club in Boston, but that's just when I realized it, as I sat in the corner and had time to think some things over.

It is a time of waiting for any senior – a time of transition. During one day last weekend I had gone apartment-searching in Boston with two friends. The shock factor of the soon to be reality didn't set in until midnight that night.

Whether or not you are a senior going to graduate school, relocating to the work world or going home and figuring things out step by step, it's undeniable that seniors are in a transitional process. Why I'm writing about it is because no one ever told me about how I'd feel or what I'd be up against in the process. But also something I've learned is, moving forward, you've got to give yourself some credit. I'm sure you've worked pretty hard.

As any senior, I am preoccupied with smoothing out the road leading to my future in just a few weeks. In May, I am graduating with 4,006 others. I'm not going to get all nostalgic on you because it not over yet folks. However, I figured if you are like me in a science general education requirement class learning that there are worms inside ant's stomachs, and birds called Plovercrests you really can't apply this knowledge to the same importance as figuring out how you are going to live on what you think you'll be making next year. This is how I spend my time in biology admittingly, with numbers, salaries and job titles.

My job search has consisted of spending precious time in class, scouring over the Boston Craigslist and indeed.com for any job with the term, "marketing," "advertising," "editing" or "writing" in it. Then, after finding an interesting job, I am quick to send in an application because there are plenty of other competing applicants, and to get a fair shot at a job, you have to apply to many, many jobs. Of course keep in mind most of this is done in class. I don't support wasting time in class online. However, if you're feeling the senior crutch – it's understandable.

At that time I couldn't understand how much of a waiting game the last month or two of college truly are. But here I am, here you are, in the waiting game.

I'm sure many of you have become experts at the cover letter writing process. Like an objective spectator, you write about your strengths, your skills and hope that the person reading it sees that you have somewhat of a good personality.

As expected, fear has been instilled in seniors. There are probably 10 regrets for every five hopeful thoughts going through your head, or at least mine. However, there is optimism out there for sure.

I remember last year when I asked my friends who were seniors about their future plans and they grimaced and said, "ask me later," which always left me confused. I mean, the future after UMass held promises of life in the city or abroad. At that time I couldn't understand how much of a waiting game the last month or two of college truly are. But here I am, and here you are: playing the waiting game.

From someone who stuck it out and studied a field that came with the tagline "you might/probably won't make much money here" are some tips for the last month or so of school for happiness at UMass and also while looking forward to a sure to be promising future.

First, it isn't too late seniors. Actually, many employers are looking now to fill jobs within the next month or so. I started applying for jobs in December and if I was considered for a position, I quickly wasn't again, when they realized I wouldn't be available until June for many of the jobs. You've still got two months to get your resume together. Go to Career Services, get advice and get going.

Secondly, it took me a long time and a lot of conversations to realize this, but you don't have to have the plans all mapped out. Now, I'm not one of those people in career services who will tell you it doesn't matter what you major in, because as someone interested in writing and print, I'm not going to go out and major in astrophysics. Point being, you've got to have some sort of direction. One of the most important things to realize is that as most seniors are ripe in age, comes positions which are frequently not dream jobs. Go for your dreams, but set realistic expectations. If an employer is looking for five to eight years of experience in publishing for instance, your résumé probably isn't going to be considered unless you meet that requirement. When applying for jobs, make sure to always throw in a wild card or two, something a little different from what you had envisioned doing. It can prove to be a good decision.

Third, don't take your education for granted. No matter if you studied English or mathematics, it is important to realize what a position you are in, being a college graduate. I'm not trying to put stars in your eyes, but if you have an education, you probably have a want to do something important with your life, and make change – and it will pay off in the end, even with all of those student loans, which I have yet to think about.

Also, you should be proactive. UMass didn't tell you what to do, the world won't either. Do what makes you happy, and what you feel you can contribute to society and the workplace most with.

Lastly, take a deep breath and enjoy the remaining weeks. These are some of the last times you can skip class to soak in the sun with friends or go for a walk into town.

CHANGE PUBLIC OPINION ON UMASS

Dear Editor,

What the public gets to know about UMass students is often dominated by sports news, or accounts of undergraduates behaving badly. Scott Merzbach's article, "Drug, alcohol illnesses tie up Amherst ambulances in the Daily Hampshire Gazette on pages. B1-B2, published April 6, 2011 characterizes the latter type very well, when 29 students had to be taken to Cooley Dickinson Hospital last weekend.

But little is generally written about students in the midst of demanding classes and jobs quietly trying to make the world a better place.

Such a story arises about the officers of Phi Kappa Phi, the nationally known land-grant honor society which has been at UMass since 1904. With no fanfare, five of the organization's student vice presidents, all seniors, organized a bone marrow registration drive during the fall semester. It involved setting up and manning tables in the student union, distributing information, talking up the project and convincing 180 students to register as potential bone marrow donors by swabbing their mouths with a Q- Tip and registering the critical genetic information in a national database. A month ago, one of the marrow donors matched a critically ill patient whose life may be saved by a UMass student's generosity and the efforts of the seniors.

A few weeks ago, the same five students organized a drive to enroll students in signing a pledge agreeing never to send text messages while driving. (Recent studies show that texting while driving causes a 400 percent increase in time spent with eyes off the road.) Their campaign has resulted in over 100 students deciding to forego texting while driving and is continuing.

These are not earth-shaking events, but rather show UMass students' quiet but unheralded determination to do something concrete to improve the world.

John R. Nelson,
Professor Emeritus
English Department

CROSSWORD MISNOMER PUZZLES

Dear Editor,

I am not positive of who is in charge of the crossword in your paper. However, I noticed something funny when I opened to the crossword in the March 31 issue. Strangely enough, the crossword is exactly the same as the Daily Hampshire Gazette's crossword on March 31. The citation on the Gazette says Tribune Media Services, Inc. Do you have the same source as the Hampshire Gazette? I hesitate to even consider that the crossword may have been plagiarized. If you do have the same source, I think it would be a good idea to cite it, so people don't get the wrong idea.

Yours truly,
Sarah Klein

Editor's note: Our crosswords come from the McClatchy Tribune Newspapers wire services, of which we have a paid subscription.

WORDS FLY ACROSS SCREENS
CHECK THIS, CHECK THAT, AND I DO
I FAIL THE EXAM
— WILLIAM PERKINS III (NEWS/POET)

A non-smoker student against the tobacco ban

Walking through campus on a daily basis, one can see smokers (and their abandoned cigarette butts) throughout campus. While not as prevalent as it was in our parents' generation, smoking is still popular among college-aged individuals. Approximately

Melissa Mahoney

one in four individuals over the age of 18 smokes regularly, according to the Center for Disease Control. Every day, I pass Franklin Dining Common and avoid the workers' fume-cloud as they puff away on their breaks. I avoid the hazy trail of second-hand smoke as I walk behind a smoker on my way to class or at the bus stop. So when I heard of the University of Massachusetts' plan to ban tobacco on campus, "A Tobacco-Free UMass," I was initially supportive. The policy will be voted on today by Faculty Senate of the University.

After all, the tobacco ban is an attempt to improve public health of the campus itself. Cigarette butts are so prevalent as litter that they have sparked campaigns to clean up, such as the "No Butts About It Day" in November last semester. The campaign pitted volunteers against the thousands of discarded cigarette butts that cover campus and also raised awareness about the effects of smoking. The ban would, in theory, create a more beautiful campus with more healthful students who have the tools to live lifestyles centered in wellness.

This is not to say that everyone will have such a rosy outlook, should this policy come into effect.

"What about my civil rights?," some might ask. "Don't I have the personal freedom to smoke?" Smoking, however, is not protected by the Constitution as a personal right, according to the Public Health Institute's Legal Center, which outlines that there is no constitutional right to smoke.

"The privacy interest protected by the U.S. Constitution includes only marriage, contraception, family relationships, and the rearing and educating of children," according to the PHI, citing Supreme Court cases "Griswold vs. Connecticut," (1964) "Meyers vs. Nebraska" (1923) and "Moore vs. East Cleveland" (1997). "Very few private acts by individuals qualify as fundamental privacy interests, and smoking is not one of them."

The PHI supports this final claim with evidence from the 1995 City of North Miami vs. Kurtz, where the city's requirement that job applicants affirm that they had not used tobacco in the preceding year was upheld by the court because "the 'right to smoke' is not included within the penumbra of fundamental rights protected under [the Federal Constitution's privacy provisions]." Therefore, there is no legal basis against the enactment of a ban on tobacco at UMass.

Therefore, regardless of any personal argument for or against the ban, putting the policy into effect seems to be a vague venture at best and an ineffectual flop at worst.

However, despite my support of this policy in theory, I feel that it could never function effectively in practice. Public dissent aside, the greater problem lies in the fact that the ban has some rather unrealistic clauses, as well as no set way of enforcement. Section II,3, states that "the use of tobacco will be prohibited inside any vehicle located on University grounds." This means that anyone who happens to drive through the campus – including "all University land, parking lots, parking ramps, athletic fields, tennis courts, and recreational areas" according to II, 2, – will have to dispose of their cigarette, even if their drive is two minutes through the edge of campus. All visitors and contractors – people not even truly a part of the UMass community – must abide by the ban according to Section II.

These measures, which seem unrealistic, if not extreme, appear even sillier when juxtaposed with the fact that enforcement of those policies would be difficult, if not impossible. As stated in the proposal, enforcement would operate on a kind of honor system that would "rely on the cooperation of all ... not only to comply with the policy, but also to encourage others to comply ..."

For an official University-wide policy, the mode of enforcement seems to depend on none other than the peer pressure of high school hallways. The next clause states that the responsibility of enforcement belongs to "immediate supervisors and ultimately University Human Resources" for faculty and staff and "for students, the Vice Chancellor for Student Affairs." However, there is no mention of fines or disciplinary action, nor any new organization to police acquiescence to the policy. Therefore, regardless of any personal argument for or against the ban, putting the policy into effect seems to be a vague venture at best and an ineffectual flop at worst.

Should the ban pass, relying on this honor system (and with clauses that will be ignored and thus undermine the policy), it would be a massive waste of funding. Money spent on "signage, flyers, information resources, announcements ... [and] a webpage" and "the development and enhancement of smoke-cessation resources" per Section III, 2,3, will be wasted on a University population that isn't listening because there is no fear of any judicial reproach.

The "A Tobacco-Free UMass" policy could be great and is one that I support, in theory. Yes, as a non-smoker, I do greatly dislike second-hand smoke. Yes, there is no constitutional basis for a "right to smoke," so the ban would stand legally. Yes, I believe in the cessation of smoking and the pathway to a healthier lifestyle and more beautiful campus. But I believe this policy would fail.

There is no real way to prevent drivers from smoking while passing through campus, nor visitors or contractors who are essentially unaffiliated with the University. As of yet, there are no real consequences for those who do frequent campus regularly to simply ignore the ban – save for the fearsome adolescent stink-eye from their non-smoker neighbor. The policy, while hopeful and with best intentions at heart, would be a waste of valuable funding unless a better plan for enforcement with realistic clauses is created.

Former comm. students to tell success stories

By Kate Evans
Collegian Staff

As the end of another academic year approaches, many students are forced to face the reality of what to make of those hard-earned bachelor's degrees. The University of Massachusetts' department of communication is hosting its annual Alumni Career Night featuring six successful graduate panelists and communication department staff.

The program will kick off with welcomes from the Communication Department Chair Lisa Henderson and Career Night Coordinator and professor Martin Norden. Following introductions are the panelists' presentations, where UMass alumni will briefly share their stories since graduation. Following the presentations will be a question and answer period, and then a reception with free Antonio's pizza.

Alumni Career Night 2011 takes place Thursday, April 7 from 6 p.m. to 8 p.m. in Herter 231. The reception following the event will be held in the Herter lobby.

Six panelists have been carefully selected to present a summary of their careers since graduating from UMass. Three of the six had taken classes with Norden many years ago, according to the professor.

"I was very interested in putting together a panel that consisted of communication alumni ... at different stages of their careers and who represented a broad and diverse range of career possibilities," said Norden.

Jessica Atwood graduated from UMass in 1995 and then from graduate school in 2000. She has spent over 15 years working as the Senior Economic Development Planner for the Franklin Regional Council of Governments in Greenfield, Mass. Atwood will discuss her work spreading broadband service access in areas of the Western Mass. area that are not serviced.

Graduate of 1996 Liz Coffey currently works as the Film Conservator for the Harvard Film Archive in Cambridge, Mass. Coffey took somewhat of a hiatus after graduation, dabbling as a bicycle mechanic, video store clerk and motion picture projectionist, amongst other jobs.

Gregg de Domenico graduated in the class of 1999 and has been aggressively contributing to the film industry ever since. De Domenico worked on "Spider-Man 3," "Dave Chapelle's Block Party," "Neil Young: Heart of Gold" and other films. He has worked on over 300 commercials, 100 music videos and shot two documentaries, which will be released in 2012.

Patrick Sabbs, a 1984 graduate, spent the decade after graduation working his way up the food chain at WWLP TV-22 in Springfield, Mass. to become Production Director. Sabbs attended Western New England College School of Law to become an assistant district attorney, a job he holds currently in the Hampden County District Attorney's Office. Sabbs acts as the real life version of Christopher Meloni, working in the Special Victim's Unit.

A graduate of 2002, George G. Smith, Jr. currently resides in New York City and works as a blogger, social strategist and self-proclaimed digital master. Smith is PepsiCo's Senior Manager for Social Activation Strategy and Execution, meaning he promotes the company's brand on social networking sites such as Facebook. He has worked with other large-name brands such as Crocs and Walmart by helping develop marketing strategies.

"[He] was a gift out of the blue," said Norden on Smith. "By coincidence, he had recently contacted the [College of Social and Behavioral Sciences] Dean's Office about wanting to meet with current students, and so his name was forwarded to me."

The communication department will host their Alumni Career Night tonight. The annual event (the 2008 event is pictured above) brings former communication students back to talk about their post-grad experience.

Since recently graduating in 2007, Hillary Teed has traveled with the U.S. Peace Corps to Dominica and the West Indies, where Teed worked with a community development and renewal program. More recently, Teed has worked for the Connecticut Community Providers Association as a Public Policy Specialist. CCPA is an organization that advances health policy and advocacy on behalf of the community human services providers.

"The panelists will have about 10 minutes each to discuss their post-UMass career paths, the twists and turns those paths may have taken and their current work," said Norden.

An hour will be available for questions after all presentations.

Immediately following the event is a reception in the Herter lobby, where "students will have a chance to meet informally with the panelists," said Norden. The professor and event coordinator has even asked panelists to bring business cards with them. "With any luck, quite a bit of post-panel networking will take place!" Norden excitedly added.

Books for diehard Sox fans

By Kate MacDonald
Collegian Staff

April is back again – the month baseball fans nationwide have been looking forward to as they endure the cold, bitter winter months. April is the month in which baseball fans have the most optimism because most teams look promising and there are still over 100 games left in the season if teams don't start off perfectly.

April is also the greatest month for fans to educate themselves on the history, intricacies and players of the nation's favorite pastime. It's an ideal time for Red Sox Nation, in particular, to pick up at least one of the hundreds of books written about the team that suffered so much pain for 86 long, hard years.

While many Sox fans are preoccupied with the current players and controversies, it's important that they know what the team had to go through to get to their present form. It's good that enthusiasts have a plethora of well-written accounts to sift through.

Here, in no particular order, are some must-read books for any Sox fan to enjoy.

"100 Things Red Sox Fans Should Know & Do Before They Die," Nick Cafardo

While this book is more about the "know" than the "do," there's enough interesting information and stories to keep any baseball fan occupied for days. It covers the history of the Sox evenly, talking about the dream team of 1967, the origins of the Jimmy Fund and Dennis Eckersley (one of the most unknown, yet best pitchers the Sox ever had on their roster), among other events. If fans pick up just one book, this one should probably be it.

"Jerry Remy's Red Sox Heroes: The RemDawg's All-Time Favorite Red Sox, Great Moments, and Top Teams" – Jerry Remy

Anyone who's ever listened to a Sox game on television or on the radio in the Boston area could probably pick Remy's, affectionately known as RemDawg, voice out of a crowd. Always equipped with Sox knowledge and witty quips on air, Remy took to the pen and paper to express his opinion, sharing who he thinks are the best 44 Sox players of all time.

"Behind the Green Monster: Red Sox Myths, Legends, and Lore" – Bill Ballou

Ballou reveals relatively unknown facts about the Red Sox and Fenway Park, information that any Red Sox fan would find wildly interesting. For example, the Sox are the only team who still play ball in a park built before World War I, Johnny Pesky never actually hit a ball off the "Pesky Pole" and maybe Bill Buckner wasn't completely to blame for that awful 1986 game (why wasn't his backup, Dave Stapleton, ever called up?).

"101 Reasons to Love the Red Sox" – David Green

The only problem with Green's book is that it's a little short and doesn't go too in-depth with the reasons as to why everyone should love the Sox. But he does cover a lot of bases, from the early 20th century World Series wins to the more recent league dominations. Pictures definitely add to the draw of this text.

"Emperors and Idiots: The Hundred Year Rivalry Between the Yankees and Red Sox, From the Very Beginning to the End of the Curse" – Mike Vaccaro

The most notable thing about this book is the picture on the cover – the infamous shot of Pedro Martinez grabbing the 72-year-old Don Zimmer by the head and throwing him to the ground. Opening the cover, both Sox and Yankee fans are treated to a colorful history of the world-famous rivalry, following it from Babe Ruth's trade in 1918 to 2004, when the curse was reversed. Citizens of both Red Sox Nation and the Evil Empire would enjoy this book; it would be one of the very few things they'd be able to agree on.

Because hundreds of books have been written about the Sox, it's hard to choose the best. Honorable mentions include: Stewart O'Nan and Stephen King's "Faithful: Two Diehard Boston Red Sox Fans Chronicle the Historic 2004 Season," David Halberstam's "Summer of '49" and Steve Goldman's "Mind Game: How the Boston Red Sox Got Smart, Won a World Series, and Created a New Blueprint for Winning."

Countless autobiographies and biographies of the best players, from Ted Williams and Johnny Pesky to Mike Lowell and David Ortiz, find their place on multiple "best of" lists concerning the Red Sox.

There are very few aspects about the Red Sox that wouldn't interest even the most fair weather fans. Even in their off years, something happens that stays in the minds of fans. From their epic losses to their unbelievable comebacks, the Boston Red Sox are always exciting to watch, and very often, even more exciting to read about.

Kate MacDonald can be reached at kaitlynm@student.umass.edu.

With an extensive library of books pertaining to the Boston Red Sox, diehard fans have a growing number of options for reading material when it comes time for a new season to start. Fans can bone up on their trivia of the team and famed Fenway Park with books by credible writers.

Private users dislike Facebook Questions

Facebook's latest feature, Questions, allows all users to view answers and comments from all other users regardless of their privacy settings.

By Bridget Carey
McClatchy Newspapers

Feeling inquisitive? Facebook's newest feature has users getting poll-happy with a quick way to survey users.

But what about privacy options? There's only one answer: none.

The feature is called Questions, and the link to create one can be found near the status bar. Facebook said it launched the tool as an easier way to gauge opinion by opening up polls to every user. All questions, answers and comments are available for anyone to see, regardless of personal privacy settings.

Obviously that's a risk for those who care about their online image. If you're wary of sharing personal information, avoid posting questions revealing details that can be used against you by malicious users, such as the city you live in, the school you attend or your kids' names.

The Questions feature was designed to be viral. Votes are shared with friends on news feeds, and then shared by other friends and so forth. One question posted last week by a guy in Orange, Calif., came my way after it received more than 2.2 million votes and 50,000 comments. The query was simple: Mac or PC?

The poll from a stranger showed on my news feed after a handful of my friends answered, so it's easy to cast a wide net. As for setting up a question the way you want, well, that's not exactly intuitive. Here are a few tips:

After typing your question, click "Add Poll Options." This is where you type choices for others to answer.

If you check the box marked "allow anyone to add options," it does two things: users will be able to vote on more than one option, and they can type in their own option to vote on.

If you don't check the box, users can only vote on one item in the list and cannot add a custom voting choice.

So if you're looking for suggestions on good restaurants to visit, movies to rent or vacations to take, check the box. But be aware that someone could add a vulgar answer without you knowing it.

When someone typed in a voting option for a poll I created, the notification I received only alerted me that someone had voted. So your poll could be altered in a way that reflects negatively on you unless you check it after every vote cast.

If you're just trying to see what one thing people like best, then leave that box empty.

And if you're voting, before you start typing your own answer, click the "more" button to see if your choice is already listed. Only the first three options show up, and clicking "more" reveals the rest.

Sounds too messy to deal with? Then just stick to asking questions to friends privately via a status message.

Magill leads attack at plate in victory

SOFTBALL from page 8

Audrey Boutin drove an outside pitch delivered by BU starting pitcher Holli Floetker to left field that scored Webster to put the Minutewomen up, 1-0. Plourde was unable to support her own cause following that, striking out and leaving two runners stranded to end the threat.

Terriers' right fielder Jayme Mask led off the bottom of the third with a single and advanced to second on a steal, before Plourde retired the next three batters once again to keep another runner stranded in scoring position and the Minutewomen lead intact heading into the fourth.

A Tiffany Meeks single up the middle led off the inning before Tess Rogers laid down a successful bunt to move pinch runner Stephanie Mix into scoring position. After Stephanie Mayne was hit by a pitch to put runners at first and second and Matthew was called out after making contact with a ball in play, Magill followed with a two-out RBI single up the middle that drove in Mix to give UMass a 2-0 advantage.

BU sophomore Erin Schuppert was then called to relieve Floetker on the mound and after hitting Webster to load the bases, she successfully dug the Terriers out of their hole by striking out Boutin to end the inning.

After Plourde and Schuppert exchanged 1-2-3 inning-efforts in the bottom of the fourth and both frames in the fifth, the Minutewomen continued the theme of timely hitting in the top of the sixth. Magill ripped a two-out triple down the left field line past the outstretched glove of Terriers left fielder Erica Casacci that drove in Matthew from first base to extend the UMass lead to 3-0.

"I thought that we overall had a pretty good day at the plate," said Sortino. "I thought that we had good at-bats [and] I thought that we swung at good pitches."

Plourde opened the bottom of the sixth by issuing a walk and allowing back-to-back singles to load the bases. After a sacrifice fly drove in the first Terriers run, Plourde seemed to be back in control after forcing a fly out to Clendenny. That assumption would be premature, however, as a two-out double by Chelsea Kehr sailed over Webster in right field and scored another BU run to narrow the lead to 3-2. Plourde kept her cool and was able to strike out pinch-hitter Whitney Tuthill to get out of the jam.

The Minutewomen were unable to put any more insurance runs on the board in the seventh and after allowing a lead-off single to Mask, who ultimately reaching third through a stolen base and fielder's choice, Plourde was able to pitch out of one last, crucial jam. With the tying run on third, she forced a pop up and lineout to secure UMass' fifth consecutive victory.

Up next, the Minutewomen will look to continue their winning streak when they return home for a Sunday double header with St. Bonaventure beginning at noon from the UMass Softball Complex.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

MARIA UMINSKI/COLLEGIAN

Audrey Boutin knocked in one of three runs for UMass in its win over the Terriers on Wednesday.

UConn holds UM to 8 hits

BASEBALL from page 8

sistent strikes got the best of it, allowing four runs on one hit by the Huskies. Machado was replaced by Ryan Lubreski, who recorded an out, walking three batters and hitting another. The Huskies also cashed in on a pair of Minutemen errors.

The Minutemen had a chance to answer in the top half of the sixth, but with a couple men on, the rally was dashed after Peter Copa grounded into a double play.

Freshman Aaron Plunkett, who replaced Lubreski in the bottom half of the fifth, ended up pitching three innings, giving up one run on two hits, striking out four and walking one. Stone said he was impressed by Plunkett's performance and that the freshman has given himself a chance to pitch more down the line.

"[Plunkett was] one of the positives of the day," said Stone.

The Huskies would add to their lead in the seventh and eighth innings, scoring on an RBI fielder's choice by Kevin Vance in the seventh and again on an RBI single by Mike Nemeth an inning later.

The Minutemen would score their lone run of the game in the top of the ninth after consecutive doubles by Copa and Tom Conley.

Getting the win for UConn was Robert Van Woert, who went 5.1 innings, giving up no runs on three hits while walking five and striking out one.

Stone added that some credit did have to go out to the UConn pitching staff, which almost shut down the Minutemen lineup for the entire game.

Of the six players in the UMass lineup to reach base with a hit, Conley and Rich Graef were the only two with multi-hit performances.

The Minutemen certainly had their opportunities early in the game with all of the walks Van Woert surrendered. After he was pulled, however, UConn's trio of relievers, David Fischer, Dan Feehan and Vance shut the door. The Minutemen left a total of eight runners on base.

Next up for UMass is its long-awaited home opener at Earl Lorden Field on Friday at 3 p.m. against Dayton. The game is the first of a three-game series.

Junior Sara Plourde went the distance in UMass' 3–2 win over Boston University, allowing two runs on six hits while striking out eight hitters in seven innings for her 12th victory this year.

Minutewomen claim 5th-straight vs. BU

UMass	3
BU	2

By Stephen Hewitt
Collegian Staff

Sara Plourde wasn't nearly as dominant as she was last week, but her efforts coupled with timely hitting were just enough to propel the Massachusetts softball team past Boston University on Wednesday afternoon for a narrow 3-2 victory.

After a memorable week for Plourde in which she was named the National Fastpitch Coaching Association National Player of the Week for throwing two no-hitters in consecutive starts and pitching 17.2-straight hitless innings, she followed that performance up by going the distance against the Terriers, allowing two runs on six hits and striking out eight to earn her 12th victory of the year.

"I thought she was better," said UMass coach Elaine Sortino following the game. "I think she's getting a little bit more confident with alternate pitches, which is really going to help us down the stretch."

Plourde's consecutive hitless innings streak snapped at 18.2 in the second inning when BU shortstop Brittany Clendenny rifled a double that put two runners in scoring position with no outs. However, Plourde pitched out of the jam, striking out the next three Terriers to end the threat and keep the game scoreless through two innings.

After Cyndil Matthew and Kyllie Magill led off the third inning with consecutive ground outs, Lindsey Webster followed with her fifth double of the season. After Meghan Carta forced a walk,

The Minutemen had trouble producing runs on Wednesday, falling 7–1 to the Huskies. UMass managed eight hits for the game, three of which came off UConn starting pitcher Bob Van Woert.

UMass suffers tough loss to Eagles on road

BC	7
UMass	1

By Eric Mansfield
Collegian Staff

A fifth-inning rally that saw Connecticut plate four runs helped secure a 7-1 win over the Massachusetts baseball team Wednesday. The loss was the fourth for the Minutemen in the last six games.

UMass coach Mike Stone was less than pleased after the game.

"[We weren't] good enough to beat a good ballclub obviously," said Stone.

Junior Robert Machado got the start on the hill for the Minutemen (8-12, 2-1 Atlantic 10), going four innings, giving up one run on seven hits while striking out three and walking four. Stone said that although he fell behind in some counts, Machado did a pretty good job and that he was impressed with how he got out of a few jams. Machado tossed 79 pitches in his outing.

Machado's performance was not the reason he was pulled after the fourth inning. The Minutemen coaching staff had him on a pitch count, knowing that they may need him to pitch on Sunday against Dayton.

The game started off relatively slow. Other than the Huskies (15-10-1) cashing in on a leadoff triple by Ryan Fuller in the second inning, neither team sustained any rally through the first four innings.

At the start of the fifth inning, UMass' inability to throw con-

Senior Kaitlyn Carpenter teamed up with Jessica Podlofsky to earn an 8-1 victory over Sacred Heart at No. 3 doubles.

UM dominates on Senior Day

UMass	6
Sacred Heart	1

By Matt Catizone
Collegian Staff

After playing .500 as a team over the season's first six months, the Massachusetts tennis team appears to be gaining a rhythm. The Minutewomen provided a sturdy performance during their defeat of Sacred Heart, 6-1, on Senior Day, this past Sunday.

"We played a strong match all the way through," said UMass coach Judy Dixon.

The Minutewomen (12-8, 3-0 Atlantic 10) started the match off solid with the tandem of Candynce Boney and Tanisha Hodgson beating Elizabeth Harrington and Kristina Chao, 8-5, at No. 2 doubles. Jessica Podlofsky and Kaitlyn Carpenter also delivered an 8-1 victory at No. 3 doubles. The No. 1 doubles duo of Yuliana Motyl and Chantal Swiszcz rounded out the day with a defeat of Gabi Kalden and Darcy Demers, 8-6. The doubles domination gave UMass the first lead of the match.

The start of singles play saw No. 1 Julia Comas beat Kate Donnelly 6-1, 6-1.Comas, a sophomore from Spain who evened her No. 1 singles record to 2-2 on the year, gave UMass momentum and extended the lead. The Minutewomen would go on to win four of the five remaining singles matches which included wins for Motyl, Podlofsky, Swiszcz and Carpenter.

The only player to lose her singles match was Boney, despite being one of the most productive players during her time at UMass.

"We would like to forget her match, the moment of playing her final home match and Senior Day affected her," said Dixon.

The senior has won a number of singles and doubles matches in her career and hopes to continue her winning ways in the A-10 tournament. Boney, however, has been slowed down by a shoulder injury she sustained and she "plays in pain, is limited in how much she can practice weekly and does not serve until matches," according to Dixon. The effects of this injury were seen Sunday when Dixon had to take an injury timeout for Boney to fix the shoulder brace she has been wearing. With rest though, the team is confident that Boney will be ready for the A-10 tournament.

The win against Sacred Heart gives UMass three consecutive wins, with the team also defeating Fairfield and St. Bonaventure. This puts the Minutewomen in great position for the A-10 tournament as they will take a winning streak into the postseason.

"There is a high confidence level, the girls know that this is as wide open of an A-10 championship as can be," said Dixon.

The seeds for the tournament were recently set. The top two seeds for the tournament are Richmond and Temple and both teams will receive a first-round bye. Richmond has dominated the playoffs in recent years, winning six of the last seven championships. UMass received the No. 7 seed, right where Dixon predicted the team would be slotted. This means that the Minutewomen will face No. 10 Fordham this Friday.

On Oct. 11, UMass and Fordham faced off in Amherst. The Minutewomen defeated the Rams 5-2 in that match, their first dual match of the season. Both teams have changed since their first meeting with UMass moving players in and out of different singles spots and using different doubles combinations.

The morale is high for the Minutewomen and they know that they have a chance to defeat the Rams.

"We're excited and right now all were doing is focusing on Fordham," said Dixon.

Track and field kicks off outdoor season

Spieler, McKenna lead team in Yellow Jacket Invitational

By Matt Strong
Collegian Staff

The Massachusetts men's track and field team kicked off its outdoor season at the two-day Sam Howell Invitational on April 1.

Coming off stellar performances from multiple athletes in the indoor season, UMass coach Ken O'Brien looked to carry that momentum into the seven-meet outdoor season, running through the IC4A Championships.

On Day 1 of the Princeton-hosted event, the long-distance brothers' tandem of Kevin and David Johnson paved the way for the Minutemen, recording nearly identical times in the 10,000-meter run. David landed a third-place finish with a time of 30:17.07, while Kevin finished 0:00.77 later in fifth place at 30:17.84. Despite the twins taking the indoor season off, their times ran two seconds off the pace of UMass records for the event. Both runners will compete in the IC4A Championships with qualifying times.

Senior Sean Duncan placed ninth in the 3,000-meter steeplechase with a time of 9:12.09, good enough to give UMass its third qualifier in IC4A. Runners Daniel Barry and Patrick McGowan finished in 29th and 45th, respectively, in the 5,000-meter run.

The Minutemen, who were originally scheduled to compete in Day 2 of the Sam Howell Invitational on Saturday, had a change of plans in regards to where they would compete. Fortunately for them, that change paid off.

UMass placed first in the Yellow Jacket Invitational at American International in Springfield, Mass. The Minutemen tallied 175 points in a complete-team effort, holding off the competition in a seven-team field, which included the likes of Amherst College, Holy Cross and Bentley.

Just as in the Sam Howell Invitational, O'Brien saw solid individual performances from multiple athletes, specifically in the throwing-style events. Upperclassmen Kevin Spieler and David McKenna led the charge. Of Spieler's three events, he notched two second-place and one third-place finish.

His mark of 170-02 in the hammer throw was good enough for second in the event and fifth best in UMass history. McKenna posted similar performances, coming one spot behind Spieler at fourth in the discus with a mark of 131-09 and fifth in the hammer throw with a mark of 147-11.

Hurdler Tyler Cotto and freshman sprinter Quinn Ryder added strong performances in their respective events to give the Minuteman two more qualifiers in the IC4A Championships. Cotto ran an impressive 14.78 time, placing first in the 110-meter hurdles while Ryder crossed the line in second with a mark of 10.82.

To continue the theme of strong individual performances, Joe Doyle and Patrick McAllister each placed first in their respective events, the 800 and 5,000-meter runs. Freshman Tom Mullen finished behind Doyle to take second place with a time of 1:57.27.

Daniel Wu and Sean Busch rounded out the field events for UMass. The former placed third in the long jump and the latter finished second in the pole vault.

The 4x100 relay team placed second, led by the freshman twin duo of Ted and Chris Greene. The latter of the two ran alongside and placed right behind teammate Paul Grafov at fourth in the 400-meter dash, which was 00.16 behind Grafov's third-place finish. Freshman hurdler Aaron Araujo added a second-place finish in the 400-meter hurdles, ending a solid day for the Minutemen.

UMass will return to action when it competes in the first of two-straight home meets this weekend at the UMass Invitational. The Minutemen will look to pick up where they left off last weekend, building on a first-place finish at the Yellow Jacket Invitational.

UMass will attempt to top its second-place finish at last year's UMass Invitational. The slew of 18 seniors will try to lead the outdoor campaign for the Minutemen. The invitational marks the first time a UMass track and field event will be televised in the program's history.

Assistant coach David Jackson and three competitors will be traveling to the Husky Decathlon Invitational this Thursday and Friday.

Matt Strong can be reached at mstrong@student.umass.edu.

UM soon to be tobacco-free

In 14-7 vote, faculty call for campus smoking ban

By William Perkins
Collegian Staff

Members of the University of Massachusetts Faculty Senate yesterday passed a proposition that aims to ban the use of all tobacco products on campus beginning in 2013.

The Senate approved of the proposal in a 14-7 vote, after several students spoke against it and some faculty members spoke in favor of it.

The policy – which won't go into effect until July 1, 2013 – was brought forward to the Senate by the University Health Council. It calls for the prohibition of all tobacco products on University property. In addition, it bars tobacco use in any vehicles on school property, and also prohibits the use of electronic cigarettes.

Sen. Tobias Baskin, a professor of biology who serves as the chairman of the Health Council, said at the onset of discussions on the matter at yesterday's meeting that statistics show tobacco use is responsible for the deaths of thousands of Americans each year, and that similar propositions have worked at many colleges across the country.

"It is reliably estimated that in America last year tobacco use killed more than 400,000 people," Baskin said, adding that use of such products can make people susceptible to diseases and can lead to economic hardships.

Baskin also said studies show that students enrolled at tobacco-free universities are less likely to become smokers.

"There's enough history with tobacco-free campuses that there [is] actually data," he said. The proposal cites the Universities of Florida, Oregon and Michigan, as well as the UMass Medical School in Worcester as campuses with similar tobacco-free policies.

Additionally, Baskin noted that "the purpose of the policy is educational, not punitive." Baskin added later on during the discussions that the new policy will mostly be enforced on a voluntary basis. He likened it to when signs went up at the UMass Recreation Center instructing students not to dispose of gum in drinking fountains – which, he said, significantly decreased the practice.

"Mostly, people will comply voluntarily," Baskin said, adding that it's his understanding that 95 percent of people on campuses already with a tobacco-free policy voluntarily comply with regulations.

In addition to Baskin, Sen. Richard Bogartz, a professor of psychology, also spoke in favor of the ban. He said that he often feels "attacked" by cigarette smoke on campus, and that he thinks a state law that requires smokers to be at least 20 feet away from a building is often violated.

And Wilmore Webley, a professor of biology who has been spearheading many of the efforts behind the proposal, noted during the meeting that it's hard to enforce rules that require smokers to be a certain distance from a structure. He also said that second-hand smoke affects many in the country.

"Second-hand smoke kills more Americans in any year than guns," Webley said.

He added that the he feels a tobacco-free policy is "preserving everyone's right," noting that it doesn't necessarily force smokers to quit because they can continue to smoke off-campus.

However, many students expressed their opposition to the proposal during the meeting, noting that it would be unrealistic to have all smokers go off-campus to smoke, and that they feel the policy infringes upon their rights.

Nathan Lamb, a political science major who also serves as a senator in the Student Government Association, said he feels parts of the policy entrench on individuals' rights. He said that people should be allowed to smoke in their own cars when on campus – because it's not affecting anyone else. He added that rather than issuing an ultimatum of sorts, the University should plan to work with students on such an initiative.

Ben Taylor, who is also a political science major, said that he doesn't feel that instituting a prohibition policy will be very effective.

"We have found as a country that prohibition doesn't work," Taylor said, noting that it didn't work with tobacco and that he doesn't think it works with marijuana.

Taylor added that he doesn't think the resolution will be enforceable. He also said that the policy would be unfair for UMass employees – who, like all students and guests on campus, would not be permitted to smoke on University property.

George Williams – a freshman English major who said he grew up under tough circumstances and smoked in middle school, but no longer smokes – told Senate members that sometimes when he was younger cigarettes were the only thing that got him through the day.

"The only thing that really kept from killing myself was cigarettes," said Williams, who noted that he is not in that condition anymore. "I know I really should have done something else, but I didn't have the option."

"You're [going to] have deaths" with the policy, Williams added.

Other students – some of whom brought protest signs to the meeting – noted that such a policy could affect the University's enrollment, that it oversteps regulatory lines and that it will force more people to smoke in hiding. Some students also vocally expressed their disapproval of some statements that were made during the meeting.

Sen. Norman Sims, a professor of journalism, brought forward a motion to have the Senate's Program and Budget Council look at the proposal before going forward. That motion ultimately failed.

Besides gaining the approval of the Health Council, the proposition also got the go-ahead from the UMass Campus Leadership Council – which is composed of members of the administration – before being approved yesterday.

Additionally, the approved smoking ban proposal calls for the creation of a Tobacco-Free Campus Committee, which will be made up of members from the student and faculty body and will be charged with carrying out most of the implementation of the policy.

Secretary of the Senate Ernie May, who also served on the Health Council, said that members will be willing to meet with representatives from the Student Government Association to go over any concerns.

Faculty Senate Presiding Officer W. Brian O'Connor also noted that there are still two years until the policy goes into effect – which, he said, will allow for most people to have their say in the matter.

"We've got two years to work on this," he said. "I'm convinced everyone will have their say."

William Perkins can be reached at wperkins@student.umass.edu.

MCT

Several students yesterday expressed their vocal opposition tobacco ban that will go into effect in 2013 on the UMass campus.

Residents oppose solar panel plan for town site

By Sam Hayes
Collegian Staff

A town forum to discuss plans to turn a former landfill off Old Belchertown Road into a solar power producing center at Amherst's Fort River School Wednesday night was marked by vocal opposition from residents of neighborhoods surrounding the tentative site.

Town Manager John Musante began the meeting by speaking before more than 80 concerned citizens who filled the small chairs and lined the walls of the crowded Fort River cafeteria.

"Apathy is not a problem in Amherst," joked Musante, and it certainly was not Wednesday. Residents had concerns about potential noise issues from the station, and worried about the possibility of a collapse of the clay cap that covers the landfill. In addition, residents voiced their fears about the aesthetics of the station potentially marring their views of the woods, and expressed that they felt they were not sufficiently involved in the process.

BlueWave Capital, the Boston-based renewable energy development company hired to build and operate the proposed panels attempted to allay concerns with promises of tree planting and enclosures to cut down on sight and noise issues, and offered explanations of how many pounds-per-square-inch the cap could hold, but citizens appeared not to be especially receptive.

Superintendent of Public Works Guilford Mooring reprimanded the riled crowd three times before he passionately spoke out again and left the meeting.

"I tell people who come to these meetings to expect educated people and conversation. I have been made a liar here today," said Mooring before his exit. The crowd retorted with jeers and yells of "bulls**t." Musante was also heckled by the crowd, but did not leave.

"We're all worked up," he said. "I'm worked up, Guilford's worked up... we are just as passionate about the neighborhood as you are," said Musante.

Residents disagreed, but he continued. "We care passionately about the town... We have to decide as a community on how to approach this project...We can't just put it [out of sight]."

Dave Keenan, an owner of 10 properties in the neighborhood abutting the landfill said he agreed with Musante, to a point.

"We have an opportunity here, maybe not on this site ... I think we have potential," he said.

Like Keenan, many residents brought up alternative proposals, including placing the panels on the non-residential end of the landfill, atop school buildings, on residential houses or in other undetermined locations.

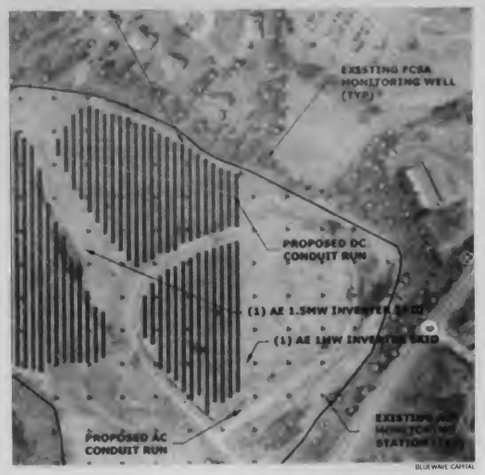
Putting panels on the schools' roofs is part of the long-term plan that John DeVillars, managing partner of BlueWave Capital, presented at the beginning of the meaning.

The current proposal is to cover the clay-capped landfill with 4.75 megawatts of solar panels, which would generate more than six million kilowatt hours per year, DeVillars explained.

"We want to make Amherst emerge as the leader [in renewable energy] in the Commonwealth... to be the first carbon-neutral town in the Massachusetts," said DeVillars.

MCT

Amherst residents have expressed concerns with a plan to build solar panels on a former landfill. Above: The nation's largest urban solar plant in Chicago, with 32,000 panels.



EXISTING PCSA MONITORING WELL (TYP.)
PROPOSED DC CONDUIT RUN
(1) AE 1.5MW INVERTER SKID
(1) AE 1MW INVERTER SKID
PROPOSED AC CONDUIT RUN
EXISTING ACCESS ROAD TO BE MAINTAINED

BLUE WAVE CAPITAL

The proposed site for a new Amherst solar panel project is a former landfill off of Old Belchertown Road (above), which could produce up to 4.75 megawatts for the town.

The current plan would seek to replace the town's present dependence on coal and nuclear power, reduce carbon dioxide emissions in Amherst by over 100,000 tons and save the town $30 million over the life of the 20-year contract, according to DeVillars.

BlueWave is currently involved with contracts across the state, with a total of 30 megawatts in solar panels including stations in Athol, Greenfield, New Bedford and other municipalities. Amherst would need roughly nine megawatts to be fully powered.

The proposed plan would give BlueWave a contract to lease the landfill and then in return sell the power to Amherst with a net credit program that would drastically reduce the cost of electricity, DeVillars argued.

After the landfill project is completed, the proposal calls for three more energy steps. First, municipal buildings and schools would be fitted with solar panels, then commercial properties would be similarly equipped, and finally residential buildings would have panels installed.

Both DeVillars and Musante repeatedly said how they appreciated the phone calls, emails, and peoples' general concerns. Musante often said, "Thank you, seriously, thank you," to people opposing the proposal after they expressed their views.

The town still must acquire permits and finalize contracts before any work is commenced.

"We are still at the very beginning of this process," said Musante.

The solar panels could be up and producing if the project is approved by May of 2012.

Why I'm not going to graduate school

Eli Gottlieb

So April has arrived, and that means that along with it comes one of the moments of truth in a science major's life (if he's fortunate): the choice between graduate school, industry, and unemployment. Now luckily, I don't have to face the last possibility, unlike far too many people I know. This means that the time has come to choose at last between going into graduate school to do research and getting an industrial job.

Last December I managed to apply to seven graduate schools by staying up late at night doing paperwork: Portland State University, Northeastern University, the University of California at San Diego, the Technion (the Israel Institute of Technology), Brown University, Johns Hopkins and the University of Maryland at College Park. They all have good departments in computer science, and a bunch of them have really good labs in my particular sub-field (programming languages). They all do fairly cool work, as a matter of fact.

By now I've gotten a fair number of responses to those applications. I've been rejected from some departments, invited to others, and Technion has never gotten back to me properly – I should poke them.

I've also sent in dozens of job applications to industry and done at least a dozen interviews. I've been in offices from the ultra-barc and boring interview rooms at the University of Massachusetts Career Services center to the luxury of Google Cambridge to the sprawled and spread out buildings of Amazon.com. Most of the applications I sent in got turned down, and most of the interviews eventually turned me down too. I ended up getting two actual job offers.

So, by now I kind of feel that I can compare the two possibilities. Industry means having a boss and going in on a set schedule. It means that the boss tells you what to work on, and then you do it.

Going to graduate school means begging and scraping for funding from year to year to avoid going into debt to pay "tuition and fees" for working a job.

Graduate school means self-starting and doing the research that I want to do. Grad school means Doing Science and contributing to humanity-at-large's efforts to push back the darkness of ignorance and tame the wild lands of new knowledge. Of course, grad school also means working any seventy hours a week you want and waking up late in the morning because you're always going to sleep too late at night.

To really comparc the two, I'd like to quantify them. Graduate school offers: $14,000 a year and $18,000 a year. For the industrial offers: $87,000 a year and $81,000 a year. Both of these include health insurance, although the industrial ones definitely have better plans. The industrial ones pay 12 months a year, and the graduate schools pay for two semesters a year. They say that in graduate school you can get internships and summer jobs to supplement your income, but it still doesn't actually come to all that much.

The offers I've received for graduate school have GPA requirements attached and last for only two to three years each before I would have to seek other funding. In industry, they just keep paying and paying as long as I'm doing good enough work, and if they're really pleased they might actually give me a raise.

I know that in American society it's taboo to talk about money, but I feel like I have to say this: graduate school is a thankless, monastic occupation that pays poverty wages and takes three to seven years of your life. Going to graduate school means begging and scraping for funding from year to year to avoid going into debt to pay "tuition and fees" for working a job. The poverty line for a single individual of working age in the United States is $11,161. Working a minimum-wage ($7 hour) job for 40 hours per week for 50 weeks per year would earn $14,000 already. So I admit, graduate school would pay more than stocking shelves at Walmart, but not actually that much more. It also requires more hours per week than Walmart as well.

One might object that an industrial salary is a salary, and will often come with more than forty hours per week of work, particularly in my field. That's true, but one doesn't usually contract with an employer for a period of three to seven years at a time. If an employer over-works me, I can leave and go be unemployed, but I can put the experience on my resume. If grad school over-works me and I try to leave, all that means is that I dropped out.

Massachusetts Institute of Technology Professor Philip Greenspun notes that "the average trajectory for a successful scientist is the following: 1. Age 18-22: paying high tuition fees at an undergraduate college. 2. Age 22-30: graduate school, possibly with a bit of work, living on a stipend of $1800 per month. 3. Age 30-35: working as a post-doc for $30,000 to $35,000 per year. Age 36-43: professor at a good, but not great, university for $65,000 per year. Age 44: with (if lucky) young children at home, fired by the university ("denied tenure" is the more polite term for the folks that universities discard), begins searching for a job in a market where employers primarily wish to hire folks in their early 30s."

So given all this, I really have to ask: why shouldn't I take an industrial job, or at least seek one? Graduate school does better than Walmart and unemployment, but why should Walmart wages in heavy research hours on an academic career path or unemployment be my only options?

Point-Counter-Point

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

AA, God and secular society

Salvation not always religious

Max Calloway

"So what did they give you?"

"Well, I had morphine every four hours when I was in the hospital and they sent me home with two weeks worth of Percocet," I said to my neighbor as we drove into town. "And man, that stuff makes you feel . . ."

"The best you've ever felt. I know man – that's how heroin was," he said.

"God, I can't imagine how I'd be if I didn't get prescribed this stuff."

"Yeah . . ." His voice trailed off as he looked out the window at the shapes and colors rushing by the car.

Three years ago my appendix exploded. I say "exploded" because that's what it felt like. Just imagine a grenade exploding in your stomach. I was rushed to the hospital for emergency surgery, hung out in a post-op bed for a week with a lot of morphine and was released with half a month's worth of professional-grade oral narcotics.

The same year one of my organs went ballistic, my neighbor was celebrating his second or third year clean from heroin – I can't remember. He had gone to rehab and was released with a prescription to Suboxone, a relatively new drug that blocks the opioid receptors in the brain. He's been on Suboxone for as long as he's been clean. He experiences withdrawal symptoms if he misses a dose.

Also at the same time, another one of our friends was in rehab, again, for heroin and crack cocaine use. I can't tell you which rehab stint he was on because in the past decade he's bounced between rehab, Narcotics Anonymous and Alcoholics Anonymous and relapsed more than a couple of times. That friend is now out of rehab and has been for a good while. We've since lost touch, but when he was doing his best he – a former metal-head heroin addict – was also on a God kick.

Then, last summer, a different friend of mine thought he might have a drinking problem. He went to a couple of AA meetings and came into work sporting a shiny "24 hours" clean coin. Adoring the edges of the coin was the Alcoholics Anonymous' serenity prayer: "God grant us the serenity to accept the things we cannot change, courage to change the things we can and wisdom to know the difference." We joked about the coin and a few days later he stopped going to meetings.

Now, I can't say I know what withdrawal symptoms or delirium tremens feel like, but I've seen my neighbor when he misses a dose of Suboxone. First he starts sweating and then the color drains from his face as the abdominal pains set in. Luckily all he has to do is pop another prescribed pill and he feels better. But there is no Suboxone equivalent for alcoholics, and many recovering addicts either don't want to trade in an illegal addiction for a legal one or can't afford the price of a prescription. So what can someone do when they're cut off from a substance that has such a grip on their physical and mental well-being that it produces symptoms that evoke death pleas?

It's easy to say, "Well they should just turn to their loved ones," but not everyone has the grace of a strong, familial-based support network – addicts especially – and some are too ashamed to admit their addiction. The second friend I mentioned earlier did some pretty heinous things to his family when he was in the depths of his addictions, and it's not uncommon for the family and friends of addicts to abandon them after losing all hope that they'll recover.

So, for many, especially those in halfway houses – where attendance of AA and NA meetings is often mandatory – the only option is a surrogate family. A family composed of people going through the same hell. As one AA adage goes, "I spent a lifetime in hell and it only took me twelve steps to get to heaven." Now, some people have a problem with the last part of that phrase: heaven. Those same people also take offence to the mention of God in the AA serenity prayer. Those people, I think, are missing the point.

AA and NA aren't sinister religious organizations preying on people who've hit their bottom in an attempt to bolster the ranks of "God's army," the religious aspect is secondary.

AA and NA exist to provide community for a population whose habits often lead them to destroy their connections to the communities they were once a part of. The fact is the NA and AA sense of the word "faith" matches up with a religious interpretation pretty damn well.

What these groups ask of their members is an open belief that if they just keep taking it one day at a time and live in the now that, eventually, they'll be able to heal from their afflictions. The members of any given AA or NA need a blind faith that they'll be okay post-substance because when they were addicted they were blind to everything but their substance of choice. Ever try reasoning with an addict? It's often difficult, to say the least. The reason: addiction works against normal cognitive functions. It creates a physical and emotional dependence while destroying perception of reality. With addiction, sometimes a little faith goes a long way.

Author's note: I understand this is a very sensitive subject, and I fully admit that I've only experienced addiction second-hand. If you feel that anything said here was incorrect or off-base, please email me or comment online, as reader feedback would be much appreciated.

Beyond one's own self

Victoria Knobloch

The discussion of whether religion belongs in spaces like Alcoholics Anonymous has many larger moral arguments tied into it. Can something be spiritual without religious aspects? Can the power of ritual and prayer have positive effect even without personal belief in a higher power?

Such questions are complex and have very few straightforward answers. Not many theological questions do. More accessible debates come down to something more basic: who is entitled to the kind of care AA can provide, and how far can we go to make recovery a welcoming and accessible process for everyone?

It has been a long time since I've been a Christian, despite the cross that hangs around my neck. In day-to-day goings-on, when everything is peachy keen, I rarely think to stop and pray or meditate or do anything but go on my merry way. But when everything falls apart I do find myself reconnecting with my own spiritual side.

My set of beliefs is complicated and often contradictory, but it gives me a certain comfort in particularly dark times. I know this to be true of many other people. That being said, there are those who find no comfort in prayer or the thought of God or in any sort of spiritual guidance, and it is the constitutional right for atheism and related theologies to have a home in America.

I often forget that my spiritual inclinations and Christian roots give me privilege. Growing up liberal meant growing up surrounded by very vocal atheists who did not hesitate to question my faith. On more than one occasion I have had someone tell me that believing in God is stupid.

Richard Dawkins wrote a book that basically called me delusional for having faith. So it is easy for me to forget my religious privilege. When the subject of faith in twelve-step programs came up, I was eager to defend it. Faith has helped me heal, and it has helped countless others as well. But that does not mean it has a place as an important element of the most accessible and well-known recovery groups in America.

America is a very Christian nation, and despite what my hippie bubble childhood would have me believe, atheists are a minority. For an atheist, or anyone who feels discomfort with religious practices for any reason, to walk into an AA meeting and be confronted with a prayer, nondenominational as it is, could be a complete turn off.

And for those running out of hope, to see a major option suddenly become just one more faith-based space could be a major deterrent in recovery.

Does this mean that recovery programs like AA should scrub their steps clean of all religious and faith based references?

Maybe not. As someone who has had my fair share of encounters with state-run mental health facilities, let me tell you, they are soulless places. The pills, the doctors, the white concrete walls and the clinical starkness of it all presents an environment where many people are sedated, but few people heal.

The success of AA, I think, can be attributed in some part to their references to a force larger than oneself. I just think there may be a more inclusive route that does not leave out those who do not believe and do not want belief to be part of their recovery.

The ideas behind the religious language in the twelve steps can exist without the religion. Believing in a power greater than ones self does not always mean believing in God. There are many things in this world greater than a single being, and it would be possible to turn your life over to those things instead.

Recovery is an incredibly personal process, and I think that can be reflected in a more inclusive twelve steps.

It is important to remember that God and religion have played incredibly important parts in many recoveries. In the process of changing a program like AA it would be critical to not minimize the legitimacy and power of those recoveries.

There must be a way to structure a program that provides many options and structures towards recovery without isolating those who are already isolated by society.

Obviously these are deep and complex issues, on both topics of spirituality and addiction. There are many experiences to consider, and each of those cannot go invalidated.

The most important thing is that all people who suffer from addiction – or any mental health relatcd issue – have as many options and routes towards good health as possible. We must labor to ensure that no one ever walks away from recovery because of religious exclusion.

YOUR WEEKEND GUIDE TO ART, MUSIC, FILM & CULTURE

ARTS@DAILYCOLLEGIAN.COM

Sisters to take the runway

By Kate Evans
Collegian Staff

Are you craving to see the spring's fiercest fashions on pretty student models, all while and/helping those who suffer from domestic violence? If that sounds appealing, check out the University of Massachusetts chapter of Sisters on the Runway's fashion show event this weekend.

SotR is a national organization through which students promote awareness and raise money for domestic violence victims by putting on fashion shows. The Sisters donate all of the fashion show's proceeds to local domestic violence shelters, which are chosen by the students involved.

The charitable organization was created by three 15-year-old girls from Montclair, N.J. in 2005. Together, Elizabeth Eddy, Gabriela Graham and Juliana Colangelo have raised over $50,000 from annual fashion shows for local charities supporting abused women and children.

UMass is the third school to follow after SotR's lead, putting on a fashion show in the Campus Center Auditorium this Saturday, April 9 from 6-9 p.m. Students Afssar Taremi and Kaelyn Siversky are co-presidents of the student run organization, as well as in charge of putting on the fashion show. The two also oversee 11 officers which include committee heads of models, sponsorship, membership, event planning and fundraising.

The upcoming fashion show will feature local boutiques, student designs and name-brand designers, in addition to music performed by DJ Loo. There will be performances prior to the event, along with food and a raffle.

Taremi and Siversky have arranged numerous fundraisers for the event, including a bake sale in UMass' School of Management atrium on Wednesday, April 6 and a benefit at Arizona Pizza Company on Thursday, April 7.

The UMass Sisters chose to donate the show's proceeds to Safe Passage, a shelter in Northamptonast. Safe Passage is an organization that provides services for victims of domestic violence in Hampshire County. The group also has an emergency shelter program for families who are fleeing abuse, counseling and advocacy programs, and a 24-hour hotline. Safe Passage has been helping victims of domestic abuse since 1977.

Safe Passage's Director of Development Sarah Smith said that several of the shelter's board members will be in attendance and/or speaking at the show this weekend.

Smith feels events such as the fashion show are vital in keeping Safe Passage running.

"They really make a difference in helping us meet the costs of providing services," she said. "We wouldn't be able to maintain services we have without events like this, so we are really grateful."

According to sistersontherunway.org, one out of every four women is affected by domestic violence. Safe Passage defines domestic violence as "a pattern of behaviors in which a person tries to control the thoughts, beliefs, conduct or actions of his or her partner." The shelter elaborates, saying the type of violence "takes many forms, including physical, emotional, sexual, and/or economic abuse."

Sisters on the Runway adds on, saying domestic violence is "a situation that affects every community, gender, age and race." The organization feels strongly that "it seems ironic that it is also one of the least discussed and funded issues," stated on the SotR website.

According to Safe Passage's website Safepass.org, "Each year, Safe Passage answers over 2,000 calls on our hotline, supports more than 250 women through our counseling and legal programs, and houses at least 35 women and 55 children in our shelter program."

Safe Passage is located at 43 Center Street Suite 304 in Northampton. The 24-hour hotline is 413-586-5066, and the toll-free line is 888-345-5282.

Taremi and Siversky are looking for new members for the charitable organization at UMass, and urge students to email umass@sistersontherunway.org for additional information. With nearly 500 confirmed guests on the event's Facebook page, the fashion show is sure to benefit Safe Passage and spread domestic violence awareness to students on campus.

Tickets for the event are still available for purchase for $10 for students and $15 for non-students. Tickets will also be sold beforehand in the Campus Center one hour prior to the event, and doors open at 6 p.m.

Kate Evans can be reached at kevevans@student.umass.edu.

Jamie Kent back in Noho

By Lauren Schima
Collegian Correspondent

Jamie Kent and the Options will be coming to the Iron Horse at 10 p.m. on Saturday, April 9. Jamie Kent is the front man, accompanied by The Options, which generally refers to Rhees Williams on bass and Tim Boucher on keyboard, guitar and vocals. Their music is heavily influenced by jazz and rock with a little bit of country mixed in.

The main aspect of Jamie Kent and the Options, though, is the performance. It's obvious that they have fun on stage and that energy transfers to the crowd. "I love performing," Kent said in a recent interview with the Daily Collegian. "That's what I'm always trying to do, and create with our live shows is some sort of performance aspect that, you know, it's like the music's there and you're loving the music and just really having a good time and that's what it should be."

Jamie Kent and the Options have two albums, "Neoteny," the debut album and "Basically Unplugged EP." One of Kent's favorite songs to perform from the albums is "Mama Sing." He explained that, "when we're with the trio at least, you really lock in to this awesome groove and play off each other musically in a way that we don't in any other song, and the vocals, we have this locked-down harmony part that hits people and I'm a big fan of that."

Kent met Williams at the party of a mutual friend. "I think he was playing with another local songwriter," Kent said, "and then she moved to California and he stayed here and I was like, 'You're playing with me now!'" He added that, "Rhees is awesome because he's unbelievably nasty at both electric and upright… and he is only 20."

When Kent met Boucher, the keyboardist, he didn't know he played piano. They'd recorded a song together called, "Nature Boy," a sort of Dixieland funeral march, and at the time, Boucher was playing sousaphone. Six months later, Boucher emailed Kent asking if he needed a piano player. "I went and saw him and I was like, 'Hell yeah. You're in.'" he recalled.

Kent's influences include Cab Calloway, The Beatles, Sly and the Family Stone, Amos Lee and Jamie Cullum. He's particularly drawn to artists like Frank Sinatra and Ella Fitzgerald.

"I think that was a time in music that was unbelievable and it was all about the music and the musicians and the performance. Everyone went out to see live music then… it was just like this cool, hip atmosphere," Kent said.

See KENT on page 7

Peggy Shaw bares all at Bartlett Hall

By Alissa Mesibov
Collegian Staff

An elephant has the wisdom that comes with age, demands respect and is thick-skinned. The same can be said for Peggy Shaw, who brought her autobiographical collaboration with the Clod Ensemble, "MUST: The Inside Story," to Bartlett Hall on April 5 and 6.

Shaw took her audience on a journey through 50 years of American medicine, sharing some of her most frightening experiences, and frequently compared herself to the Elephant Man. She began by recounting her failed attempt to leave the hospital in New York City to make it to the Woodstock festival, which happened to be during the birth of her daughter. Then came her mother's mental illness, and later its treatment with round after round of electroshock therapy. One of the hardest moments to watch was a song about Shaw's sister, who died an early death.

The greatest talent [illegible] senses is her ability to [illegible] ence in with personal [illegible] and then, following [illegible] disturbing and grotesque [illegible] leaving the audience [illegible] open to whatever [illegible] their way next. She began [illegible] about life as a 66-[illegible] grandmother, quickly [illegible] hard-hitting poetry, often [illegible] death or sex — or both. What [illegible] is so disquieting was her use of [illegible] and "I," which seemed to force the audience into a sense of intimacy.

However, it was hard [illegible] noticing the long pauses [illegible] were found throughout the one-hour performance. Numerous times, Shaw had to pause to remember a line or had to repeat herself.

It turned out that this was Shaw's fifth performance after having a stroke only seven weeks ago.

"Tonight was the scariest show [illegible] projection screen with her back to the [illegible] Slide after slide reflected on [illegible] arms, her back and her hair. She [illegible] the show, and the show was her.

It's odd to hear slam poetry from a 66-year-old woman, but it accompanied the movement of the piece incredibly well. The poetic stanzas make more sense after learning that Wilson studied under the famous physical theater acting teacher, Jacques Lecoq.

"Lecoq believed that the human body is poetic beyond words," Wilson said, describing Lecoq's theories.

"There is no better verbal accompaniment for such a theory than poetry, itself.

Shaw is a master of human emotion. She manipulates the audience until it is twisted around her finger and at her mercy. "MUST" [illegible] powerful words, and unites them with the work of some very talented artists.

Alissa Mesibov can be reached for comment at amesibov@student.umass.edu.

Jamie Kent back with Options

KENT from page 6

He got started in high school when he auditioned for "Pippin" because of a girl. When he was cast in a good role, he started considering getting more involved in music. "I started studying voice then and I picked up a guitar like the next year and it just kind of all snowballed from there." Kent has studied voice for the last eight years.

Jamie Kent and the Options just returned to Northampton from a three-week tour of the U.S. Their tour — and Kent's whole career — was funded by The Collective; according to the band's website, jamiekent.com, The Collective is a community of "loyal fans, friends, and advisors" who support Kent's career financially.

Of The Collective, Kent said, "People can invest in my career, and then in return they get free music, free tickets to shows, free merchandise and then they can vote on decisions like what the album artwork should be, what the first radio single should be, where we should tour." The Collective currently has about 125 members. Kent hopes that this model will be adopted by other musicians and intends to eventually start a record label.

On the upcoming show at the Iron Horse, Kent said, "We're trying to really fuse together some genres that are different from each other, but I think we're doing it in a way that is at least pleasurable to the ear and really fun live… If you come to a concert we're going to try to take you on a journey through both emotions and energy…You'll see if you come to the Iron Horse!"

Tickets are $10 in advance and $13 at the door.

Lauren Schrima can be reached at lschrima@student.umass.edu.

Scribblers & Scribes: *A Contest for the Writer in You*

From **MARCH 5-APRIL 10**, the Daily Collegian will be accepting **YOUR poetry & short fiction** for publication consideration in a special literary issue. **Prizes** might very well include everything from gift cards to movie passes. Judges will be selected from the Comp Lit & English departments, and to guarantee impartiality all entries will have the author's name removed during the judging process. Please, **don't be a punk.** Nothing obscene for the sake of it.

Entries will be judged by members of the Comp Lit department.

https //www.amherst edu/campuslife/keefe/calendar
*Tickets Guranteed March 21th - March 27th

By Jay Asser
Collegian Staff

After breaking its brief two-game losing streak, the Massachusetts men's lacrosse team will take on conference foe Towson on the road on Saturday.

No. 16 UMass will travel to Towson for the first time in the regular season since 1963. The matchup with the Tigers also marks the final contest of a three-game road stint and the beginning of a four-game stretch in Colonial Athletic Association play to round out of the regular season for the Minutemen (6-3, 1-1 CAA).

Following a 16-9 victory over Saint Joseph's on April 2, UMass will look to carry momentum over into Saturday. While momentum is often difficult to judge, UMass coach Greg Cannella feels that it is a factor in college athletics.

"I think the personalities of a lot of, not only our kids but other student athletes are, 'Hey, we won the last one. We're feeling good about this. Let's have a good work week of practice and get back out there,'" said Cannella.

Though the Minutemen seemed to get out a lot of offensive frustration in their win over the Hawks, they will need to be sharp on attack once again when they face Towson, who have kept games low-scoring this year.

Of their nine contests, the Tigers (2-7, 0-2 CAA) have held opponents to under 10 goals in five of them. In back-to-back games in late February and early March, Towson held both Loyola and Mount St. Mary's to three goals each. While the Tigers' offense hasn't done the defense any favors, ranking second-to-last in the CAA in goals per game (7.11), Cannella knows his attack will need to have a strong effort.

"You got to get this one into double digits if you want a chance, honestly, so you got to score," said Cannella. "In these CAA games, they're grind out games so every possession counts, every play counts and we try to make our guys aware of that as much as we can that we're [going to] have to grind this out on both ends of the field and in between the lines."

In two meetings in 2010, Towson claimed a pair of victories against UMass. After edging the Minutemen 10-9 in a regular-season matchup at Garber Field, the Tigers handed the Minutemen a 13-6 loss in UMass' first conference playoff game in the CAA semifinals at Johnny Unitas Stadium on May 5. Towson used a 12-2 run to create separation and hold off the Minutemen for the victory.

Of the four contests in which the Minutemen failed to score double digits that year, Towson was the opponent in two of them. That's why Cannella feels that the Tigers of this season aren't much different than the team that gave the Minutemen problems last year.

"I think they're always [going to] be gritty, they're always [going to] be well prepared," said Cannella. "Regardless of what their record says, they're always [going to] be a solid team and they play a really tough schedule when you look at it and you just hope that, again, we can go down there and play well."

The two losses to Towson last season, however, were in UMass' first season in the CAA. With a season under their belt and experience gained in the conference, the Minutemen are starting to feel more comfortable against CAA opponents.

"It's still developing but our guys should [feel experienced], especially when you lose a team twice the year before," said Cannella. "You better know something about them if you're [going to] go play them again."

The contest is slated for a 1 p.m. start on Saturday at Johnny Unitas Stadium.

Jay Asser can be reached at jasser@student.umass.edu.

Women's lax hosts DU before going to SBU

By Dan Gigliotti
Collegian Staff

The No. 11 Massachusetts women's lacrosse team began its Atlantic 10 schedule in winning fashion, the same winning way it left off last season.

Wins against Temple on Thursday and La Salle on Sunday were the start to what coach Angela McMahon and the Minutewomen hope will be their third-consecutive conference championship.

UMass (9-2, 2-0 A-10) has ranked in the deBeer Media Poll for six consecutive weeks, the most in team history, and the program is garnering more recognition each week.

Still, McMahon isn't willing to celebrate her team's success yet, not until the Minutewomen continue their winning ways through April and, she hopes, into May.

"No, it's not a big deal," said McMahon, in reference to her team's highest ranking in the national polls since 1988.

"It's good for recruiting, that's about it," added McMahon. "Beating Duquesne, right now, is our focus and that's our only focus because if we don't do that, the rankings don't mean anything at all."

For the second-straight week, UMass plays two games in a three-day span, beginning at home against Duquesne on Friday and on the road against St. Bonaventure on Sunday.

Sunday's game was moved from the Bonnies' campus to Alfred University because of unfavorable field conditions.

The Dukes boast the stingiest defense in the A-10 and are ranked 13th nationally in scoring defense, averaging just over eight goals per game (8.36). Goalie Liz Walker (7.27 saves per game, .479 save percentage) and the Duquesne defense will provide an interesting match-up against the Minutewomen and their top-ranked offense in the A-10.

UMass averages over 14 goals per game (14.18) and over 30 shots per game (31.45) and are ranked 11th nationally in scoring. However,

UM hopes to keep streak alive

By Pete Vasquez
Collegian Staff

On Sunday, the Massachusetts softball team will look to sweep its third-straight doubleheader as it hosts St. Bonaventure at the UMass Softball Complex.

The Minutewomen (14-14, 5-3 Atlantic 10) are riding high on a five-game win streak, the last of which was a 3-2 win at Boston University. Before that, UMass made work of visitors Dartmouth and Saint Louis, sweeping both doubleheaders to gain ground in the A-10 standings.

Sara Plourde collected two no-hitters in five days and the Minutewomen allowed only five runs in the four games.

St. Bonaventure (6-11, 3-5 A 10) is also feeling good recently, having won three of its last four games after losing four in a row.

The Bonnies split a doubleheader with Dayton last Sunday despite scoring 16 total runs on the day. They will play Rhode Island on Friday and Saturday before coming to UMass.

St. Bonaventure currently sits in ninth place out of 11 teams in the conference. The Bonnies went 13-27 overall last year and 7-11 during conference play. While the Minutewomen claimed the No. 1 spot in the A-10 tournament, the Bonnies did not make the playoffs as one of the top six seeds.

Both teams were supposed to meet last season in New York, but the doubleheader was cancelled and never made up.

UMass faced St. Bonaventure two years ago in Amherst and won the two-game series, 4-0 and 10-2 in five innings.

Sara Plourde, a freshman at the time, got the win in Game 2 and struck out 12 hitters in her five innings of two-run ball.

However, this time she will have to deal with the top offense in the conference.

St. Bonaventure is far and away the current leader in the A-10 in batting average with a team mark of .289. Yet, the Bonnies have played only 17 games on the season, 10 less than the Minutewomen, whose national recognition gets them into more preseason exhibition games. Perhaps the Bonnies' best hitter is Maureen Wells, who, in 13 games, is third in the conference with a .400 batting average. Other conference leaders on the Bonnies include Jessenia Andujar and Ashley Nowak, currently batting .360 each, and Kara Morenus, who holds a .333 average. This quartet claims four out of the top 15 spots in the A-10 individual batting category.

Surprisingly, no one on the team has more than four home runs. The difference between St. Bonaventure and the conference's top teams rests on pitching. While UMass' pitching staff has compiled a miniscule 2.05 team earned run average, St. Bonaventure's ERA sits at an inflated 5.27. The Bonnies have given up the second most earned runs in the conference, besting only Rhode Island.

In 187.2 innings pitched, the Minutewomen have tallied 281 strikeouts. The Bonnies, on the other hand, have produced only 58 strikeouts in 103.2 innings.

Junior Kyllie Magill will get the first chance to feast on their staff. The UMass leadoff hitter is living up to her unofficial "sparkplug" title by going 6-for-17 (.353) with five RBIs during the team's winning streak. UMass has not lost to St. Bonaventure in the regular season since May 5, 2006 when the Bonnies beat the Minutewomen, 5-3.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

The Massachusetts softball team celebrates following a win. The Minutewomen are currently on a five-game win streak as they host St. Bonaventure this weekend for a doubleheader.

No. 11 UMass looks to stay strong

LACROSSE from page 8

the veteran players will have to accomplish something the program hasn't in four years.

With a 6-7 all-time record against the Dukes, Duquesne is one of six teams that hold a winning record over the Minutewomen in at least 10 meetings (out of 21 total opponents).

The last UMass team to beat the Dukes was in 2007, as the Minutewomen have dropped three consecutive regular season games in the series by a combined total of four goals. No current Minutewomen player has experienced a win over the Dukes and their experience will be a key factor in Friday's match-up.

"That's where we rely on our veteran leadership, our juniors and seniors, to really help prepare and set the tone for these league opponents because they know them well," said McMahon.

UMass' history against St. Bonaventure has been the exact opposite, winning three-straight games over the Bonnies, including an 11-6 win at home on April 11, 2010.

McMahon will have little time to prepare for the Bonnies, but she is confident that her players' familiarity with conference opponents will make the transition smooth.

"One good thing is that the girls are kind of used to the teams that we play and know a lot about them, so I think they're pretty familiar with the styles and stuff," said McMahon. "Obviously, players change year-to-year which we get them prepared for. But, I think in terms of style, they're pretty aware of what the different teams do."

Maintaining focus on the road with short preparation time has not been an issue so far this season for the Minutewomen, as they are 6-0 away from McGuirk Stadium, including a 17-4 win in Philadelphia over La Salle their last time out.

"They have to focus that much more, in the little time they have, so I think they did a really good job last week of really focusing in on La Salle, because we only had a few days to get ready for them," said McMahon. "I think it's more of a mental game as opposed to a physical game when it comes to short game preparation."

Somewhere in the collective consciousness of the UMass players is the importance of each game's impact in the A-10 standings. With five games remaining on the schedule (four in conference), the Minutewomen are looking to gain high seeding for the A-10 Tournament.

"We try to treat every game sort of the same, but I think in the back of the girls' heads, in terms of the weight it holds for our future and hopes of making the A-10 Tournament… I think that's sort of in the back of peoples' minds," said McMahon. "But, in general, we try to go about our business the same exact way as we did with all our non-conference games."

UMass hosts Dayton in first series at home

By Michael Coumos
Collegian Staff

After playing 20 away games, the Massachusetts baseball team will finally return home for a three-game series at Earl Lorden Field against conference foe Dayton this weekend.

UMass (8-12, 2-1 in Atlantic 10) looks to edge ahead of the Flyers (14-15, 2-1 A-10) as both teams are tied in the A-10 (along with Fordham) with 2-1 conference records. The Minutemen won their first conference series against George Washington in late March.

The original home opener at Earl Lorden Field was supposed to be on Wednesday, but poor weather on Tuesday forced the Minutemen to travel to Connecticut to play the Huskies on Wednesday instead. Tuesday's game is postponed until April 18.

UMass did not fare well against the Huskies on Wednesday, falling 7-1, giving the Minutemen their fourth loss in their last six games. UConn (15-10-1) came into the game ranked #29 in Collegiate Baseball Newspaper's top-30 poll this week. The game started off well for UMass, as starting pitcher Robert Machado cruised through the first four innings, allowing one run in the second.

The fifth inning, however, was not as kind as the Huskies tacked on four runs to take a 5-0 advantage. Offensively, the Minutemen got going a little too late, as they managed to break up the shut out in the ninth with back-to-back doubles by senior Peter Copa and junior Tom Conley.

Machado took the loss with his record now at 2-3. UMass managed to scatter eight hits, including two each from Conley and sophomore Rich Graef. UConn's Bob Van Woert tossed 5.1 shutout innings for the Huskies to improve to 3-0.

Dayton has lost its last two games, the most recent coming on Tuesday against Toledo when it lost, 7-4. The Flyers struggled early, allowing all seven runs in the first four innings. Dayton did have 10 hits, but struggled to plate them, leaving 11 runners on base.

The Minutemen had success against Dayton last season, taking two-of-three against the Flyers in Ohio. The bats were rolling in that series, with UMass outscoring their opponent, 44-31, over the three-game stretch. Copa and Kyle Multner combined to drive in nine runs in the first game, an 18-12 win. Nick Serino, now signed with the Washington Nationals, got the win for his performance on the mound, pitching 6.1 innings.

In the second game of the series last year, the Minutemen took a two-run lead into the ninth inning but were unable to preserve the win. Matt Gedman took the loss for the Minutemen, working 1.2 innings and allowing five runs. Gedman and Multner were 3-for-5 at the plate in the losing effort.

UMass took the series in the rubber game with a 10-2 victory. Senior Bryan Leigh went the distance for the Minutemen, while Copa had a round-tripper in the game. Gedman finished with two RBI while Eric Fredette drove in three.

The Minutemen hope to replicate last year's series this weekend. The first game will take place on Friday at 3:00 p.m., followed by Saturday's game at 1:00 p.m. and Sunday's contest at 11:00 a.m. All three games will be at Earl Lorden Field.

Michael Coumos can be reached at mcoumos@student.umass.edu.

Over 1,700 register at dining commons for marrow drive

By Jessica Sacco
Collegian Staff

They came with red balloons, music, pins, t-shirts and lots of determination.

Stationed outside of every dining common on the University of Massachusetts campus, the UMass branch of DKMS Americas – a bone marrow donor center – spent Thursday and Friday recruiting passersby to join the bone marrow registry.

The group's efforts seemed to pay off. At the end of the day Friday, 1,722 people registered to be placed on the "Be The Match Registry," where they will be listed as donors until they reach the age of 61.

"UMass clearly has a student body that's exuberant for life," said Shira Simcha Nouriel, a UMass student who serves as the vice president for the University's DKMS Americas branch.

Decked in red DKMS Americas t-shirts, volunteers at each of the dining commons promoted the same message: a five minute registration can make a difference in someone's life.

"If you did nothing your entire life but give someone life, that is the noblest thing you could do," said Michael Guglielmo, the New England ambassador for DKMS Americas. Those interested in joining the registry were required to fill out a registration form and have the inside of each of their cheeks swabbed to collect cells for Human Leukocyte Antigen (HLA) tissue typing. HLA are proteins found on cells in the body and are used to determine bone marrow matches.

Tiny red puzzle piece pins, which represent the donor's ability to be the missing "puzzle piece" for someone needing a transplant, were given out to each person who registered.

Justin Graci, a freshman from the UMass Marketing Club, became involved in bone marrow drives after his sister was diagnosed with acute myeloid leukemia, a cancer which interferes with the production of white blood cells.

His goal for the drive was to find a match for Oliver Williams, a less-than-two month old infant with Wiskott-Aldrich syndrome, a rare disease that results in a low platelet count.

"If we can't find [Oliver] a match, my goal is we'll find someone one," he said. "It's about saving lives."

Marissa Foto, a UMass freshman, decided to register with the hope of making a difference in someone's life.

"The more people that register, the more lives can be saved," she said.

Phil Arbeiter, a sophomore from the Pike fraternity, volunteered at Berkshire dining commons to assist in the registration and promotion process for the event. His entire fraternity participated in the drive the previous year and registered all of its members. This year, he hoped to add many more people to the registry.

"Everyone that comes through who I swab, I just think, this could be the person to save someone's life," he said.

While many did take the time to register, Guglielmo, who accompanied the Pike students at Berkshire, was frustrated at the lack of open-mindedness from some students.

"They're walking away and they could be the one person who could give someone a second chance at life," he said. "It's very sad."

Volunteers outside Berkshire dining commons placed 455 people on the registry in two days – above Worcester at 281, but behind Franklin at 498 and Hampshire at 488. But Guglielmo hoped to have more men sign up to be donors, as he said that males between the ages of 18 and 25 are the ideal candidates. Currently, only 28 percent of people on the registry are males, he said."There are only two types of men who will register," said Guglielmo. "They are the intelligent ones and those who find it their duty to save lives."

The three types who will not donate, Guglielmo said, "Are apathetic, selfish or cowards…or a combination of the three."

UMass freshman Nick Cline said he registered because he likes helping people.

"I joined the army to make the world a better place, so I can take the one in 20,000 chance to save someone," he said. "I would want someone to do the same for me."

Jessica Sacco can be reached at jsacco@student.umass.edu.

ALEX PENACHIO/COLLEGIAN

At a bone marrow drive held at campus dining commons last week, more than 1,700 community members signed up to become donors.

Holocaust Institute opens to the public

The new Institute for Holocaust, Genocide, and Memory Studies opened at 758 North Pleasant St. last month.

By Katie Landuck
Collegian Staff

On March 28, the University of Massachusetts opened the Institute for Holocaust, Genocide, and Memory Studies with an exhibit that commemorates the Holocaust through the stories of five families.

The main attraction of the institute, located at 758 North Pleasant St., is the permanent exhibit "A Reason to Remember: Roth, Germany 1933-1942," which was donated by the Jewish Federation of Western Massachusetts.

The exhibit tells the stories of five German-Jewish families, starting before the Holocaust began. Using photographs, historical documents, audio and a documentary about the Holocaust, it shows the ways the individuals it depicts were persecuted. Only 11 of the 31 members of the five families survived.

"My favorite part is getting to know the families," said UMass professor James Young, the new director of the museum. "They were just trying to live normal lives, when the Nazis rose and everything changed. They were Jewish-German families that were suddenly told they were no longer German. It is an intimate way to know a much greater event," he said.Young was approached with the idea of creating the institute two years ago by the Hatikvah Holocaust Education Center in Springfield. Running out of money, the center's organizers knew the center would have to close and wanted to make sure the exhibit was not lost.

"The exhibit needed a new home," said Lara Curtis, a doctoral candidate at UMass and assistant director of the institute, who is the member of the Hatikvah community that originally developed the idea to bring the exhibit to UMass.

"I was teaching French Literature as a TA and representation of the Holocaust came up, and I noticed students had a desire to learn more about it," said Curtis. "So I thought it would be great to bring the center here." Despite having no place to put it and no

Exhibit ponders Polish Solidarity

By Karissa Hamblet
Collegian Correspondent

Polish immigrants, Polish Americans and community members alike gathered at the University of Massachusetts' W.E.B. DuBois Library last Wednesday to witness the unveiling of "Human Solidarity, Polish Solidarność" – an exhibit honoring the 30th anniversary of the country's Solidarity movement, which helped lead to the installation of a democratic government.

The exhibit, which previously was on display at both Stony Brook University and Yale University, is composed of 20 plates – consisting of photographs, newspaper clippings and other artifacts – that detail the history of the Solidarity movement. Some of the plates feature pivotal figures in the development of the movement – such as Anna Walentynowicz, a woman that became well-known for standing up against her dismissal from a job at the Gdansk Shipyard, who died in a plane crash last year along with the country's president.

The Solidarity movement in Poland has its roots in the strikes that took place at the Gdansk Shipyard in 1980 – where, according to the BBC, workers demanded more rights and higher pay from the communist-controlled government. The movement played a large role in the country's political scene in the following years, and contributed to the sanctioning of free elections in the country in 1989.

Polish Consul General Ewa Junczyk-Ziomecka, who was a journalist in the country during the Gdansk Shipyard strikes, was the guest of honor at last Wednesday's unveiling – which was in part put together by Robert Rothstein, a professor of Judaic and Slavic studies and comparative literature, and his wife, Galena. Junczyk-Ziomecka spoke about witnessing the events that unfolded at Gdansk, but not being able to publish any stories on them – because government officials censored her and her fellow journalists.

WIKIMEDIA COMMONS

Worker strikes at the Gdansk Shipyard (pictured here) led to the creation of the Polish Solidarity movement in 1980. A new exhibit is on display at the W.E.B. DuBois Library, honoring its 30th anniversary.

Additionally, Junczyk-Ziomecka spoke about the development of the Solidarity movement.

"When I'm thinking about Solidarity, I think about an act of modern opposition," she said. "However, at the beginning it was not yet politics. The effectiveness of this protest depended on public opinion in Western countries, in democratic countries. That opinion was shaped by foreign journalists.

One attendee of the event asked Junczyk-Ziomecka how Solidarity is taught in Polish schools today.

"First of all, there are still leaders of Solidarity among us," she replied. "They are witnesses, so they can talk about it, which is very much appreciated by the school system.

"This personal contact is always so important for the young generations, even if they believe we are from the Stone Age," she added.

In addition, Junczyk-Ziomecka also commented on the current state of Poland's economy.

"The prices are going up," she said. "Two weeks ago, my mother told me in Warsaw that, 'You know, we are buying sugar,' and I said, 'Mom, what do you need the sugar for?' and she said, 'Well, the price is going up, but they said that you can't buy more than 10 kilos.' So the generation before ours still remembers what happened – that the prices would go up so high."

Junczyk-Ziomecka also spoke about the condition of the Euro – the most common form of currency in Europe – and Poland's current stance on the monetary system.

"Who is in the better shape? Those who joined Euro or those who [didn't]?" she asked. "So according to the economies, we are not in that bad [of a] situation because we are not with [the] Euro. But [the] situation goes in the direction that in a total account of the situation that all of the European countries will have the same currency, so we are thinking about in two years [joining] the Euro."

Additionally, when asked about Polish culture's resistance to communism, Junczyk-Ziomecka noted, "Polish culture was always in good shape because Polish people are perfect masters to be against [communism] and to ride against something, against the government, against other people. There is so much poetry about it and so [many] novels about it and films about it… to be against and to fight, it's wonderful."

Junczyk-Ziomecka also spoke on the effects of

Students help out over break

COURTESY MASSPIRG

Roughly 50 students spent their spring break participating in community organizing efforts.

By Thomas Barnes
Collegian Staff

Instead of spending spring break at the beach or with family, more than 50 students from across the Five Colleges participated in a Grassroots Community Development honors seminar class sponsored by the University of Massachusetts Alliance for Community Transformation (UACT), passing their break trying to promote awareness of structural inequality while community organizing in Springfield, Boston and Danville, Va.

According to Lily Brown, a student leader of the class, the course hopes to expose students to the tenets of community organizing and give them a place to practice their solutions to the problem of structural inequality – a perceived bias based in terms of social status.

The course "emphasizes a liberatory mode of teaching, a critical pedagogy, in an anti-repressive curriculum in which people can be whole people in the classroom," said Brown.

The course is divided into two halves. During the first half, students learn the theories of community organizing, which they put into practice during the alternative spring break, according to a University release. The second half of the course is spent evaluating their experiences organizing and empowering communities.

Each group of students worked with their local organization's representatives to raise awareness about important issues within the community.

Bylaw would place birds in backyards

If a bylaw which will go before Amherst's Town Meeting next month is approved, residents will be able to keep up to 12 chickens in their yards.

BY AMANDA DRANE
COLLEGIAN CORRESPONDENT

At next month's Amherst Town Meeting, elected committee members will be presented with a proposal from the Amherst Planning Board that calls for a change to a town bylaw and would allow for residents to keep up to 12 chickens at a property.

According to the Daily Hampshire Gazette, University of Massachusetts Professor of Plant, Soil and Insect Sciences John Gerber has been an outspoken advocate for the change. Gerber, who also serves on the town's Conservation Commission, has stated that he got involved with the movement for sustainable agriculture because he wanted to be closer to the food chain that feeds his family. Gerber has also dedicated his backyard to his egg-laying chickens.

Planning Board member Richard Roznoy is the only member of the committee who does not support the proposed bylaw. He said in a phone interview that 12 is an inappropriate amount of chickens for a resident to have.

The Amherst Planning Board started discussing the proposal last fall.

In a phone interview, Planning Director John Tucker said the process involved with the proposal is "rather exhausting." The planning board is fine-tuning the proposal to be ready for the Town Meeting, which will commence May 2.

When asked about his proximity to the issue, Tucker said that he has a "hand, claw and a wing" in the matter.

The proposal will also allow residents to keep rabbits, but it won't allow them to keep roosters, peacocks and other fowl that are known to be noisy.

Additionally, the Planning Board is working on the matter of zoning. There will be a provision that all abutting residences be notified when a neighbor is keeping animals.

The proposed bylaw will also include mandatory registration and inspection of the animals and the property that they inhabit. Animal Welfare Officer Carol Hepburn and Health Director Julie Federman will be put in charge of enforcement, if the bylaw passes, according to the Gazette.

Amanda Drane can be reached adrane@student.umass.edu.

UM students work on community organizing

ASB from page 1

In Springfield, students worked with The Alliance to Develop Power, according to the release.

In Boston, they partnered with City Life Vida Urbana, the release states. In efforts to advocate for those whose homes have been foreclosed upon, students went door-to-door canvassing residents, informing them about their foreclosure rights and attempting to forge dialogue on class and social hierarchies with them.

In Virginia, the release states, students worked with a fledgling chapter of Virginia Organizing (VO) in Danville, helping them to recruit members through phone banks.

"It was lots of hard work, but everyone was incredibly diligent, and the push was successful at a community meeting," said Brown, who worked in Virginia, about the canvassing her group accomplished.

According to the release, Deborah Polin, the UACT director, said conditions were rough for the volunteers, with students often sleeping on floors of community centers. The students worked long hours, she said in the release, culminating in a structured reflection at the end of each day.

However, the trip was "awesome," said Brown. She added that "it was the epitome of what we're going for – lots of hard work, but everyone got something out of it. It was a symmetrical [sic] relationship, beneficial for us and our community partner."

Many of the students that participated in the organizing efforts are planning on extending their efforts with their respective organizations, the release states.

The program, which is sponsored by the Anthropology Department and the Commonwealth Honors College, shifted its focus this year from a development-structured course to one emphasizing empowering communities through organizing, according to the release.

"Organizing is primarily a lot of canvassing and phone banking to actively recruit people," said Brown. "It emphasizes bringing power to the community so it can take what it needs. Before, the development focus involved building homes and other immediate local services."

Katie Landeck contributed to this report. Thomas Barnes can be reached at tbarnes@student.umass.edu.

A bond of sisterhood

The Everywoman's Center at UMass presented "Body Politics 2011," a theatrical production, last Thursday and Friday. The show depicted narratives of the experience of women of color.

THE BRYANT
GRADUATE PROGRAMS

The Bryant University Graduate School of Business prepares students for success in their chosen professions. As a graduate, you will join an impressive alumni community that includes industry leaders across the country and around the world.

THE BRYANT MBA ONE-YEAR PROGRAM
Full-time, day program for all majors
- No professional experience necessary
- Distinguish yourself in a competitive job market
- Gain hands-on experience with the Business Practicum

THE BRYANT MBA TWO-YEAR PROGRAM
Part-time, evening program for professionals from any field
- Develop high-level business skills for long-term career success
- Enter and progress through the program with a supportive team
- Build your network while enhancing your resume

THE BRYANT MASTER OF PROFESSIONAL ACCOUNTANCY (MPAC)
Full-time, day program for accounting majors
- Meets the 150 hour requirement for CPA licensure
- Complete in Summer/Fall, Summer/Summer, Fall/Spring or Spring/Summer
- Tax concentration available with Summer/Fall or Summer/Summer plan

THE BRYANT MASTER OF SCIENCE IN TAXATION (MST)
Part-time, evening program for tax professionals
- Build an expertise in all areas of taxation
- Network with tax executives and industry professionals
- Flexible scheduling options

LEARN MORE ABOUT BRYANT UNIVERSITY AT THE GRADUATE AND PROFESSIONAL SCHOOLS INFORMATION DAY ON OCTOBER 27TH FROM 11:00AM – 3:00PM IN THE STUDENT UNION BALLROOM

Polish Consul General attends opening of Solidarity exhibit

SOLIDARITY from page 1

Solidarity in Polish culture today.

"When the Solidarity won, when the communists collapsed, suddenly our writers, our Poles, had nothing to say," she said. "What is there to say about the good news? For example, look now. Such a terrible crash, the plane crash that happened a year ago. There is only two movies made, and they are mostly propaganda, but there is not drama."

In addition to Junczyk-Ziomecka, Dr. Robert Cox, the head of the W.E.B. DuBois Library's special collections unit, spoke at the unveiling of the exhibit about what his department collects and why it chose to bring "Human Solidarity, Polish Solidarność" to UMass.

"We collect things related to the University here," Cox said. "We collect materials relating to Western Massachusetts, and then we actually do have rich collections for Polish immigrant communities from the 1890s-forward here at UMass."

Cox also said his unit wants to expand upon its collection of items about social change.

"When we talk about social change in special collections, we think about groups and people who try to change the world," he said. "People who look around and see social injustice and try to correct it, or people who think of new ways to manage society for the better of all.

"When Bob and Galena [Rothstein] came to us a few years ago with a possibility of adding this massive Polish collection, it immediately struck me that this was square in the middle of our social change mission," said Cox.

"The Solidarity collection still forms a critical core for the way we see our collections evolving," Cox added. "We believe that as this becomes more and more distant in history, as the Solidarity movement moves back farther in time, we're going to see more and more historical research into the movement, and more and more use of it for contemporary movements for social change as well."

The Polish Solidarity exhibit will continue to be on display through May in W.E.B. DuBois Library's learning commons.

Karissa Hamblet can be reached at khamblet@student.umass.edu.

"Human Solidarity, Polish Solidarność," a new exhibit at the W.E.B. DuBois Library, features plates detailing the history of the Polish Solidarity movement, similar to this one at Wayne University.

Institute seeks to keep alive victims' memories of genocide

INSTITUE from page 1

money at the time of the offer, Young "couldn't help but say yes" to the project.

"There was a time when I didn't think it would happen," said Young. "But I already knew some very generous donors who had been giving money to the Department of Judaic studies, so I went down to visit them and they were very generous."

One anonymous donor who purchased the house where the Institute is located is charging only $1 of annual rent. In addition, UMass alumni Pamela and Robert Jacobs, based in Washington D.C., have donated the funds necessary to pay for the Institute's operating budget and endowment.

Now that the doors are open, Curtis said, business is booming. She estimatesythe institute had overd1,000 visitors in the last two weeks, ranging from classes of middle school students to Amherst community members.

According to Young, thus far the reaction has been positive.

"If they come away knowing one small thing they didn't know before and they walk away feeling just a little bit changed inside, I think that is all we can ask for,"ghe said.

The Institute has yet to establish formal operating hours, but Curtis said she is available from 9 a.m. to 3 p.m. most Mondays, Wednesdays and Fridays, or by appointment.

"A Reason to Remember: Ruth, Germany 1933-1942" is the main exhibit at the Institute for Holocaust, Genocide, and Memory Studies.

Over the next few years, Young hopes to expand the institute to include information on other genocides, such as Rwanda. This will include expanding one wall of the exhibit to include more photographs.

"It is important to keep remembering genocides like the Holocaust and Rwanda and think about the ways that learning about them might lead to intervening in modern genocides," said Young.

He will be donating his own personal collection of over 3,000 books on genocide and memory studies to the Institute. He also plans on incorporating computers, archives, classes and other resources that will help students learn.

"We want it to be a really homey resources," said Young. "A place where they will come sit down and read stuff they can't find anywhere else."

He also hopes to bring visiting exhibits into the other rooms of the house, as well as to host guest speakers. Curtis shares t e same vision.

"I am hoping to have many, many programs for both the academic and non-academe community," said Curtis. "I want people I want this to be a place where the community can come together and learn. I feel like we are creating a new center of gravity."

Snooki's lifestyle too popular

We're willing to give athletes thousands of dollars in appearance fees, so why not reality stars?

Eddie Hand

What sort of deity did Snooki have to sell her soul to in order to get the kind of life she has?

I'm a regular viewer of "Jersey Shore," and I still don't get her appeal outside of morbid fascination. She looks like an oompa-loompa, and her personality is lovably grating at best and downright vile at worst. It's fun to watch her because she's such a train wreck, but my jaw dropped like a sack of heavy objects when I learned that she had somehow convinced Rutgers University to pay her $32,000 to speak there.

I get that she has entertainment value; "Jersey Shore" is comedic genius, and she's savvy enough to take advantage of her newfound fame. But it's one to thing for her to write a book or get interviewed by "Rolling Stone," and something completely different to be paid more than Nobel Prize winner Toni Morrison to speak at a decent university and tell the attending students about how much bronzer and hairspray she buys.

A part of me feels like there's something wrong with this. I'd like to blame the administration, but I can't; it was a student-run organization that funded the appearance. The other part of me isn't even remotely surprised by this. The saddest part of it all (or maybe just the most interesting, depending on how you look at it) is that the cast of "Jersey Shore" is doing what a lot of people wish they could do – not so much the rampant partying and mayhem that seems to take place in every episode, but the easy money they make for seemingly doing nothing.

I've been watching "American Idol" since the eighth grade. A lot of the appeal is that you can vicariously live through the contestant as they slowly but surely rise to prominence (at least until they don't receive enough votes and fade into obscurity).

Most of the contestants are singers by trade anyway, so it's not like they're doing anything radically different from their day-to-day life. "Jersey Shore" takes this concept to its logical extreme.

Where "Idol" can be subtle, "Jersey Shore" snorts some coke and goes on a rampage.

It's a lot like "The Real World," but with even more volatile people and the result is fascinating, especially assuming it isn't scripted (which it very well might be, but for the sake of a clear argument, we'll assume it isn't).

While there's a reasonable amount of talent necessary to succeed on "Idol" (because technically it's still a competition), Snooki's skill set appears to be limited to the ability to do gymnastics while intoxicated and possession of a liver that can seemingly process rocket fuel.

I'm fairly confident that given the opportunity, I too could get drunk on national television and act like a moron. I have not been lucky enough to do this, but Snooki, The Situation and all their self-proclaimed "Guido" cohorts have.

They make literally millions doing what they probably would have been doing anyway. They have effectively hit the career jackpot. Truly, they are living the dream (at least until their respective livers explode or they get a venereal disease or something).

But does that really mean we should be doling out money just to hear her tell us what most of us have been doing anyway? Is it worth thousands of dollars that could be spent on something a little more tasteful? Does anyone really want to hear her talk about her book or what it's really like being on the show?

Apparently, yes; it is.

And I guess there's nothing wrong with that. The girl has made a name for herself with nothing more than a poofy haircut, a bad attitude and extremely reckless behavior. If she was doing it in the stock market, she'd be considered an eccentric genius. While "Jersey Shore" may not fit into the norm for most people (especially over the age of 24), I can't imagine that anyone wouldn't want to get paid for letting someone film their regular routine. Or perhaps I'm not giving peoples' sense of privacy enough credit. Maybe there's something I'm missing. Maybe she's just funny and Rutgers is just lucky that they were able to book her. She's providing entertainment. People want to go see her, so in that regard, she's worth every penny. We're willing to give athletes thousands of dollars in appearance fees, so why not reality stars?

Charlie Sheen

Ed/Op doesn't just need fresh blood, it needs fresh tiger blood.

editorial@dailycollegian.com

Going all in for Libya

However, the rebel forces can't win this conflict on their own.

Yaroslav Mikhaylov

If you are going to do something you have to see it through to the end.

This is especially true in cases of military intervention. The use of military force is by definition a commitment. Therefore, one should be skeptical of any form of intervention that involves deploying military hardware and personnel but claims to avoid commitment and entanglement.

A no-fly zone and limited air support in Libya is just that. Its proponents state that it carries all the benefits of a full-scale military intervention – a friendly or at least marginally less crazy regime, without its drawbacks – sending troops into yet another Middle Eastern country with no clear long-term plan. In fact, now that the United States and the North Atlantic Treaty Organization forces have taken aggressive actions against the Qaddafi regime, they have already committed themselves as friendly to the rebels and opposed to the current government. Now, NATO and the U.S. can only win this conflict with the rebels or lose it together with them.

A no-fly zone is already an intervention. Because the government in Tripoli has more combat aircraft than rebels, instituting a no-fly zone will improve the rebel movement's chances for victory. That establishes NATO and the U.S. as enemies of the Qaddafi regime. If Qaddafi manages to crush the rebel movement and retain control of the country despite Western interference, he is unlikely to return to cordial relations with nations that opposed him and will instead offer his allegiance and Libya's oil to other allies such as China or India.

Therefore, there is no diplomatic benefit to a no-fly zone over a full-scale military intervention. Furthermore, the global diplomatic outlook also now associates the NATO coalition with the rebel forces. Other nations supporting the rebel forces will hold the coalition liable if the rebels fail because it was unwilling to offer more aid than a simple no-fly zone. And the international opponents of the intervention already view it as an intervention.

Politically speaking, NATO is essentially an ally of the fledgling Libyan provisional national council.

However, the rebel forces can't win this conflict on their own. This was shown when, immediately after NATO airstrikes on Qaddafi forces near Benghazi, the rebel forces took the city easily, only to be driven out once NATO air support ended. Because the U.S. and NATO are already committed to the intervention, they need to take more aggressive actions to support the rebel cause. Without active attacks on Qaddafi positions, the rebellion has no hopes of reaching Tripoli, Libya's capital, much less taking control of it. While this may seem like a violation of the original reason for the no-fly zone, which was preventing further civilian deaths in the conflict, it also will avoid a long and drawn-out civil war. Should the rebels' Western allies take an active role in the military actions against Qaddafi's supporters, it is likely Qaddafi will simply seek to capitulate. Should any one of the major NATO states actually bring the full weight of their armed forces down on Libya, Qaddafi's armies would be destroyed in days. Just the fear of such a confrontation is likely to convince most of his supporters and possibly even Qaddafi himself to give in to the rebel forces. And so, the actual application of overwhelming force can be avoided. But as long as a full-scale intervention seems unlikely, prolonged civil war seems inevitable.

Finally, a direct intervention will allow NATO and the U.S. more control over the conflict's aftermath. If the current situation is left to stand, and the rebel forces somehow manage to seize power in Tripoli, what they will do with this power remains unknown.

The rebel factions committed to democracy might remain in control, or power might pass to a radical Islamist or Communist faction, or another military strongman might institute a dictatorship similar to Qaddafi's. Without a Western presence on the ground, a democratic Libya might be as far out of reach as it was a year ago. Furthermore, the allies will have no control over how Qaddafi's supporters might be treated. If the victorious rebels decide to purge the supporters of the "Ancien Régime" in a bloody reign of terror, it will be nearly impossible for NATO to stop it without boots on the ground.

The current situation is untenable. NATO has taken all the risks associated with an intervention – international opposition, deployment of war material and political fallout in case of defeat, without any of the benefits of a real intervention – guarantee of success and oversight over the formation of a new government. Because the risks are already taken, the Western coalition should at least be in position to reap the rewards from those risks.

Even a large-scale bombing campaign will significantly shorten this conflict and guarantee a rebel victory without endangering more American lives than this conflict already has. There was a time when the U.S. could have avoided commitment to Libya. That was a month ago. Now that the U.S. is part of the conflict, it is time for them and their NATO allies to do their part right.

Alumni express need for networking

By Kate Evans
Collegian Staff

As six put-together, yet laid back-looking University of Massachusetts alumni took the stage on Thursday at 6:05 p.m., audience members quieted in anticipation. The communication graduates assembled to share their various success stories since their UMass years.

With the Herter auditorium nearly half-filled with students and scattered professors, Communication Department Chair Lisa Henderson kicked off the event by reading a poem by Mary Oliver. Next, Henderson introduced Career Night Coordinator and Communication professor Martin Norden, calling him the evening's "Master of Ceremonies." Norden explained the event title's use of the word, "alumni'ae," saying he wanted to be gender neutral. He also introduced the panelists individually, opening the stage for the presenters.

Jessica Atwood was the first alum to speak, looking relaxed in casual wear. A graduate in 1995, Atwood took part time graduate classes through UMass to complete her master's degree in business administration. The primary focus of her career since achieving her degree has been to improve broadband access in Western Massachusetts.

In 2006, Atwood formed WesternMA Connect, Inc., a non-profit organization. At that time, one-third of the towns in Western Massachusetts had no cable, broadband or DSL, Atwood said. WesternMA Connect, Inc. has helped to change this, but, according to Atwood, some towns today still only get dial up service. Atwood was incredibly informative and fast-winded while sharing her journey, finishing up her blurb in under five minutes.

The second panelist, Liz Coffey, began by mentioning that she had coincidentally lived in the same dorm as Atwood. Coffey drew laughs from the crowd as she jokingly referred to it as the "hippy, slacker dorm."

Coffey attributed the variety of film classes she took while attending UMass and the films she watched in her spare time to influencing her decision to pursue a career in film. After graduating from UMass, Coffey worked as a video store clerk, renting two or three movies a night and watching the VHS tapes into the wee morning hours. Through a friend, Coffey got a new job working as a projectionist at a movie theater. After 10 years of learning everything there is to know about film, Coffey decided to move on from projection. Through another friend, she got an internship in Rochester, N.Y. as a film preservationist.

Coffey found networking to be vital in her job quest, helping her find several film archive openings.

"I always thought it sounded unpleasant, like you have to make this false relationship with somebody," she said. "In reality, it seemed like I would make friends with somebody, then they would get me a job."

She has worked in Maine and Rhode Island, and is currently the Film Conservator for the Harvard Film Archive in Cambridge.

The next guest, Gregg de Domenico, claimed he was disappointed that film was not a major option of study when he attended UMass. His relative worked as a television producer and she advised him to work from the bottom up, so that's exactly what de Domenico did. He walked up to the film set of "15 Minutes," starring Robert De Niro and Edward Burns, and knew it was for him. After that, de Domenico worked as a projection assistant at a commercial production company in New York after hearing about the job from a friend at UMass.

From the start, de Domenico knew; "A: I didn't want to work in a f**ing office, and B: I didn't want to work 9 to 5."

Gathering experience while eventually working with star directors like Steven Soderbergh, de Domenico acquired the skills to work on projects of his own.

Recently, de Domenico has shot two feature-length documentaries in the past several years, saying, "You can't get that kind of experience in film school, you can only get that on a set."

Patrick Sabbs had a different state of mind than the previous panelists, wearing a suit and working traditional hours.

Sabbs started out by getting a television internship at WWLP 22 in Springfield. He worked "back when we still typed on typewriters. Anybody know what a typewriter is?" he jokingly asked the audience.

Sabbs reflected on his time as studio camera operator, classifying the position as hectic but a blast. After working his way up from assistant director to director, then weekend news director, Sabbs got married and laid down roots in the area. He went to law school, creating an unthinkable schedule for himself. He worked at the TV station from 3 p.m. until midnight, then studied until 3 a.m., and then woke up three hours later to walk the dog and drive to school. Sabbs had classes until 2:30 p.m., at which point he drove straight to work and repeated the process all over again.

After nearly driving himself crazy with this schedule, Sabbs' hard work paid off. He now prosecutes sexual assault cases in the Hampden County District Attorney's Office.

Sabbs claims that "I'm not a rich attorney, but I'm surrounded by rich attorneys."

Following Sabbs was George G. Smith, who got the crowd's attention by starting his speech with, "I think I'm the only corporate whore up here." A Syracuse, N.Y. native, Smith decided to pack his bags and move out west. There he found a job at a small shoe company just starting out called Crocs.

"You all laugh, but you know someone that owns a pair," said Smith. The social media enthusiast pitched the idea of online marketing to the shoe company, and, in little time, the online sales were wildly beating the rest of the company's sales. At 26-years-old, Smith was in Crocs board meetings and being referred to by his boss as a "whipper snapper."

Since then, Smith has worked as the digital strategist for Wal-Mart and is currently working for PepsiCo.

"I work a 9-to-5 job, but I also got to spend three weekends ago hanging out with Snoop Doggy Dogg," gloated Smith.

Smith ended by affirming networking's importance, saying, "The people you're sitting next to now are probably going to be the most important people in your life, because they will connect you."

The last of the panelists was the most recent to graduate, named the baby of the group by her fellow speakers. Hillary Tweed graduated in 2007 and found out she was accepted into the United States Peace Corps, scheduled to leave two months later in July. After three months of training in the West Indies, Tweed was placed in Dominica, a small island in the Caribbean.

While in Dominica, Tweed taught at a primary and secondary school in the village where she resided. She taught her students basic math skills and provided them with a source of motivation and therapy. Tweed also worked with the village council, analyzing functional community dynamics and dilemmas facing the village.

After returning to the U.S. in 2009, it took Tweed six months to get another job. Through her mother's co-worker, she found a public policy job working as a lobbyist in Hartford, Conn.

After Norden thanked the panelists and audience for coming, a reception was held outside the auditorium with free Antonio's pizza and Pepsi products. The panelists hung around to chat with inquisitive students and old professors, while others ran for the buffet line.

Kate Evans can be reached at kvevans@student.umass.edu

'Hanna' disappoints

Eric Bana and Saoirse Ronan star in "Hanna" as a father-daughter duo with a hidden agenda. Although Ronan's performance was impressive, a trite plot and undeveloped characters left "Hanna" lacking.

By Ian Opolski
Collegian Staff

The first scene of "Hanna" shows the title character hunting an elk. After an intense hunt, Hanna misses the mark and her shot fails to fatally wound the animal. Standing over its body, she robotically intones, "I missed your heart." This opening shot proves to be extremely prophetic, because "Hanna" is, for the most part, such a conventional and uncreative action movie that when it aims for the heart of the audience (or its brain, for that matter), it misses the mark by a long way.

The movie follows Hanna (Saoirse Ronan), a scrappy 16-year old girl with extraordinary physical strength. She lives in a cottage in the woods of Finland with her father (Eric Bana), who trains her in stealth and survival skills. Her father is honing his daughter's abilities so that one day she can venture into the world and kill an American politician named Marissa Wiegler (Cate Blanchett). But when Hanna goes to make her assassination attempt, she finds that her mission, her past, and the world itself are nothing like she had imagined.

There are, admittedly, some very cool fight scenes throughout the movie. Hanna has been trained in every imaginable form of combat, so we are treated to knife fights, shootouts, hand-to-hand combat and even archery. These intense fight sequences are combined with creative camera angles and a strong electronic soundtrack crafted by The Chemical Brothers to create several moments that approach sensory overload. Post-battle close-ups of Ronan's blood-spattered face set to a techno beat are some of the rare stimulating moments which "Hanna" has to offer.

Ronan herself is another of the film's few bright spots. Her character, raised far outside human civilization, is bewildered by such aspects of modern life as electricity, and she completely lacks social skills; at one point, for instance, she enthusiastically brings a raw rabbit to the breakfast table. Such scenes could be unintentionally hilarious, but Ronan navigates them well enough that even if they aren't endearing, they are at least credible. The actress' pale skin, wild blond hair, and bright blue eyes are physically perfect for the part; she actually looks like someone who could have been raised in the woods.

The best performance by a young actress in the film, however, has to go to Jessica Barden, who plays a brain-dead English girl whom Hanna befriends along her journey. Her comedic delivery is one of the few points which "Hanna" really nails, and she makes a nice counterpoint (and perhaps a small measure of cultural commentary) when placed side-by-side with Ronan's uncivilized wild child.

Otherwise, the acting in the film is either negligible or bad. Blanchett as Marissa Wiegler is icy and ruthless, but because her character is so undeveloped, she comes off more as a gun-toting caricature than a formidable opponent. Blanchett attempts a Southern accent, but the result doesn't actually seem representative of any portion of the United States.

Even worse is Eric Bana's character, which is even more undeveloped and contributes almost nothing to the movie except for some fight scenes and shirtless sequences. Bana certainly could have been omitted from this movie and it wouldn't have made one iota of difference.

The worst part about "Hanna," though, is its plot. The reasons which motivate Hanna's mission are revealed slowly, so for much of the movie, the audience is clueless as to why Hanna and Wiegler are in conflict. The movie feels as if it is heading toward a great plot twist or some grand revelation, but the payoff is disappointingly straightforward, even to the point of blandness.

Further, while the scenes detailing Hanna's bewilderment in modern society do help to develop her character, they don't make any real sense. If she is going on a mission which requires at least a small degree of espionage, why wouldn't her father prepare her for actual human interaction?

Action movies like this require suspension of disbelief, but a lunatic teenager who has no social skills and beats up almost everyone she encounters would probably stand out a bit more than Hanna does in this film. If "Hanna" had more positive qualities, it might be easier to overlook these lapses in credibility, but the film's plotline is so weak that it is hard not to focus on all the film's faults.

With its strong visuals and seasoned actors, "Hanna" could have been good, but the storyline is tired and brings nothing new to the table. A weak narrative and a particularly disappointing finale make this one a dud.

Kent offers 'options'

By Lauren Scrima
Collegian Correspondent

Jamie Kent & The Options played a brief but fun show at the Iron Horse in Northampton on Saturday night.

The opening band was a duo called Goodchild Badchild with Evan G. on lead vocals and Anthony D. on guitar and back-up vocals. The band is reminiscent of Linkin Park, sharing their brooding chords and strong lyrics.

Evan mainly raps, while Anthony backs him up with strong performances on guitar and accompanying vocals. The duo attempted to harmonize, but because Anthony's microphone was not loud enough, Evan's singing dominated, while Anthony couldn't be heard.

Despite the fact that Goodchild Badchild's style is very different from that of Jamie Kent & The Options, the crowd seemed to enjoy it, and there were few, if any, awkward applause-less silences that sometimes accompany opening bands.

After Goodchild Badchild left the stage and sound checks were done, Tim Boucher, keyboardist for Jamie Kent & The Options, took to the stage and began playing a melancholy tune on sousaphone that sounded like a theme for a Tim Burton villain. Eventually he was joined by Jamie Kent, who began singing "Nature Boy," the very "Dixieland funeral march" that brought the two musicians together.

Kent announced that it was his mom's birthday and then proceeded to sing a rockabilly version of "Happy Birthday to You" that he told the crowd he had heard while on tour.

They followed this with "Mama Sing," in which Boucher showed off his skills on piano with some improvisation that captivated and silenced the crowd. The jam then switched focus to Kent, who beat-boxed for a few measures before turning the focus to Rhees Williams on upright bass. The song closed with a three-way call and response between Boucher, Williams and Kent, who was scatting.

Next was a cover of The Beatles' "I've Just Seen a Face," for which the band moved from the stage, through the crowd, to the stairs that lead up to the balcony. Unfortunately, there was no spotlight, so the band was playing in the dark. Even so, the song was a novelty, and not just because the song is rarely covered; Boucher's prowess on the melodica made the song fun, albeit obscured.

The trio also played a particularly heart-felt "Once Again" before Kent invited up Pete VanSiclin on saxophone, Jay Mosall on trumpet and Keith Laudieri on drums. At this point, Williams switched to electric bass. When they played, their body language said it all. The whole band was rocking out, with Kent dancing. Williams swaying and Boucher bobbing his head to the rhythm of his fingers on the keys.

For a song called "Drop Baby Drop," Williams took over the keyboard while Boucher picked up the sousaphone again and Kent introduced a ukulele into the menagerie of instruments already on stage. The song had a playful melody and called on the audience to sing a little call and response with Kent, reiterating the words "tango" and "mango" during the chorus.

The second-to-last song was "Bonofasitch," off of "Neoteny." Kent then announced that they would play one "last" song, turned around and wait for the audience to cheer for an encore, and then turned back around to play one more.

In the encore, Kent & The Options covered Cab Calloway's "Minnie the Moocher," a jazz tune that sounds like the score of a scandalous black and white film from the 1940s.

Overall, the show was fun and kept the audience on its toes. The band changed things up often and kept things interesting.

According to the band's website, jamiekent.com, their next show will be in Salem on April 14, but they will be back at the Iron Horse on June 26.

Jamie Kent & The Options performed at the Iron Horse in Northampton last Saturday night. Duo Goodchild Badchild opened for the local singer-songwriter and his band.

Plourde goes distance in both games for UM

MINUTEWOMEN from page 8

ner was the first hit at home allowed by Plourde this season, in over 30 innings.

"I definitely didn't want to give that up," said Plourde. "I think I was even ahead in the count too. I really didn't want to give that one up."

The lone run of the matchup came from Stephanie Mayne, who was pinch-running for Plourde after the ace worked a leadoff walk in the second inning. Mix stole second and advanced to third on an illegal pitch before Teea Rogers singled through the left side of the infield for the only run-batted-in of the first game.

Plourde again dominated the diamond in the second game, allowing her first run at home while striking out 15 and walking one. She received a little more offense in the latter half of the twin-bill, receiving hits from 7-of-9 UMass batters, including two home runs.

"I thought we opened up a little bit [offensively]," said Sortino. "We did a good job at the plate, and we stayed patient."

Lindsey Webster and Stephanie Mayne led the offense for the Minutewomen on the day and each hit two-run home runs to left field in the fifth inning of the second game. After second baseman Kyllie Magill doubled, Webster worked the count to 2-1 then promptly hit the next ball she saw into the netting beyond the left-field fence for her team-leading fourth homer of the season.

Two batters later, Mayne stepped into the batter's box after first baseman Audrey Boutin walked. Down in the count, 0-2, Mayne got a fastball from Bonnies pitcher Jen Sansano and hit it to the same place Webster did. The round-tripper was Mayne's second of the year, as she was two-for-three with four RBIs on the day.

The Minutewomen weren't done scoring, however. After consecutive base-hits by Rogers and centerfielder Cyndil Matthew in the sixth inning, Magill hit a sacrifice fly to the outfield to add another run and make the score 7-1.

The Maroon and White improved to 16-14 overall and 7-3 in A-10 play with the victories and will travel to Chestnut Hill, Mass. on Wednesday to face Boston College at 4 p.m.

Michael Wood can be reached at mcwood@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

UMass coach Elaine Sortino meets with her team on the pitcher's mound during Sunday's doubleheader against the Bonnies. The Minutewomen swept the Bonnies and travel to BC on Wednesday.

JEFF BERNSTEIN/COLLEGIAN

Jordan Storro and Teea Rodgers discuss a play during their victory over the Bonnies on Sunday. The Minutewomen swept the doubleheader and are now undefeated at the UMass Softball Complex this year.

Minutewomen play 8 contests in 12 days beginning April 13

HOME from page 8

them here at the games."

Although the statistics support UMass' continuing home-field advantage, Sortino isn't buying too much into it.

"I don't think it's a matter of being here. This time of the season, we've had to weather a lot of storms in terms of injuries, youth [and] inexperience," said Sortino. "I think the team is just playing better, I think they played really well at BU the other day, actually better than they did here today."

LOOKING AHEAD

While the Minutewomen are certainly playing their best ball of the season, Sortino wants her team to stay grounded and understand there's much more work to do. Weather and scheduling have prevented UMass from practicing much outside, and Sortino knows there's only so much the team can accomplish indoors.

"I think [there are] things we need to work on offensively in terms of our pitch selection," said Sortino. "We're going to have our fourth practice outside tomorrow. So the things we've been able to just start to do like base-running, reading balls offensively and defensively as a baserunner… We've got a lot to work on; I've got a list five miles long."

The Minutewomen have a very busy upcoming schedule and will seek to keep the momentum going. Starting April 13, UMass will play eight games in 12 days. The Minutewomen will be on the road for the first four before returning home for two doubleheaders against Syracuse on April 22 and George Washington on April 24. UMass has taken full advantage of doubleheaders this year, with an 11-3 record.

"It takes us a while to get going, so the second game is always so much better than the first, which is so annoying," said Webster, laughing. "We'll win the first game 1-0 and we'll smoke them the next game, and that seems to be a pattern. Doubleheaders definitely get our pitchers going… [Plourde] almost had another no-hitter [and] she's just amazing. [Doubleheaders] get us a lot of practice and keep our stamina and our energy up."

Steve Levine can be reached at slevine@student.umass.edu.

Colonials and Spiders come to Amherst next week for UMass

W LAX from page 8

minutes and four seconds of the first half to take a 7-3 lead going into the break.

Ferris and O'Donnell paced the team with two goals apiece in the half.

In the second half, the Bonnies scrapped their way back into the game, when Emily Kane scored early, making the score 9-6. The Minutewomen would not be outdone, however, as they responded with three of the next four goals, with Haley Smith capping off the run with her second goal of the game, extending the lead to six.

With just under eight minutes remaining, the lead seemed insurmountable and a UMass win appeared inevitable. However, the Bonnies made the final few minutes uncomfortable for the Minutewomen.

With four minutes, 39 seconds to play, the Bonnies' Danielle Drabin scored on a free-position goal, cutting the deficit to four.

But Defliese, who entered the game with just four goals on the season, scored her third goal of the game and effectively put the game away for good.

Drabin led the Bonnies (4-6, 1-3 A-10) with three goals, and goalie Karly Kocis stopped 16 shots.

On Friday, the Minutewomen kicked off their successful weekend with a 13-6 victory over Duquesne, a team that had defeated UMass in their last three meetings.

The Minutewomen were led by freshman Katie Ferris (four goals, one assist) and senior Jackie Lyons (three goals, one assist), while O'Donnell and Smith each added two goals a piece.

Florence made four saves in the cage for the Minutewomen.

Lyons now has 125 career goals, as her hat trick moved her into a tie with Sue Murray for the third-most goals in UMass history.

Again, the draw controls were a pivotal part of the game for the Minutewomen, who went 17-for-21 in draw controls against the Dukes.

UMass stormed out to a 5-0 lead in the first 15 minutes and 12 seconds of play. Duquesne tacked on a pair of goals to stop the run, and the Minutewomen offense was held at bay until Lyons scored the final goal of the half, making the score 6-2.

The Dukes' Katie Rekart opened up the second half with her second goal of the game. From that point on, it was all UMass, as the Minutewomen went on their second 5-0 run of the game, highlighted by Ferris' third goal of the contest.

The teams traded goals for the rest of the half, with Duquesne unable to make a legitimate run at the lead.

UMass outshot the Dukes, 38-17, and barely won the ground-ball battle, 18-17.

Rekart led her team with three goals and one assist, and Liz Walker stopped nine shots.

The Minutewomen will have two home games this coming weekend. On Friday they will take on George Washington at 4 p.m. Then on Sunday, Richmond will come to town for a 12 p.m. start, with both games being played at McGuirk Stadium.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

Ferris leads squad in goals with 39, Smith contributing to team

LYONS from page 8

three goals Sunday, one fewer than she had in 12 games prior.

Senior midfielder Haley Smith has benefited from her role sprinting off of the bench, scoring 23 goals this season, while junior attacker Jesse O'Donnell (23 goals, seven assists) is taking advantage of familiar conference foes, scoring eight goals and dishing out four assists in her last three games.

JEFF BERNSTEIN/COLLEGIAN

Senior Nazy Kerr makes a move against the Dukes.

The top scorer on the UMass squad is freshman Katie Ferris who, in 11 games this season, has 39 goals and eight assists. Ferris tallied four goals against the Dukes, five goals against the Bonnies and has scored a hat trick in all but two of her games played this season.

Meanwhile, Lyons is second on the team in points scored with 23 goals and 20 assists. Those rank as some of the highest totals in the A-10 this season, but for her they are modest numbers.

With 43 points so far this season, she is on a pace to score fewer points (approximately 66) than she did in each of her previous two seasons (71 points in 19 games in 2009, 69 points in 20 games in 2010).

On Friday, Lyons scored her first hat trick since March 2 and did not register a goal on Sunday. Despite her slowed goal-scoring production, she has been setting up her teammates with more regularity than at any point in her career.

"Everybody on our offense is a threat, so even if you face-guard one of us, somebody else is just going to step up," said Lyons. "Everybody on our team can go to goal. We're moving off the ball for each other, so that was working good, and we were just moving the ball around really well."

With three games left in conference play, the Minutewomen offense appears to be consistent enough to compete for a third-straight conference title. Whether or not Lyons receives personal accolades, her regularity on the attack will go a long way in determining how UMass finishes its season.

Plourde near-perfect in victories

Junior records 30 strikeouts, UM sweeps visiting Bonnies

By Michael Wood
Collegian Staff

UMass	1
Bonnies	0
UMass	7
Bonnies	0

Massachusetts pitcher Sara Plourde won back-to-back games and struck out 30 batters in 14 innings of work as the Minutewomen defeated St. Bonaventure, 1-0 and 7-1, respectively in Sunday's doubleheader at the UMass Softball Complex.

"Today was definitely one of those days that I had to struggle through and battle through," said Plourde. "It was good that our offense was able to get a couple runs across the [plate] for some insurance runs, though."

With her 15-strikeout performance in the day's second contest, Plourde became the third pitcher in UMass history to reach 900 strikeouts in her career and the first to do it before her senior year. That's an average of 300 strikeouts-per-season in an Atlantic 10 conference that is full of free-swinging teams. Her career total now sits at 905, 313 behind Brandice Balschmiter (1218).

"She's a great young pitcher," said UMass head coach Elaine Sortino. "The thing about her is that she's getting stronger and things are starting to work a little bit better for her and more effectively. It's good to see her getting better every day."

The junior held the Bonnies hitless for 12.2 innings before giving up a first-pitch single to right-field in the sixth inning of the second game. That base run-

Sortino & Co. extend streak at home to 6 straight victories

By Steve Levine
Collegian Staff

Fourteen innings, 30 strikeouts, one no-hitter and two victories.

It was just another day on the mound for the Massachusetts softball team's ace, Sara Plourde.

In UMass' doubleheader against St. Bonaventure on Sunday, Plourde threw her third- consecutive no-hitter at home in the first game, leading the Minutewomen to 1-0 victory. The junior fanned 15 batters and walked three. Plourde got the nod in the second game as well, filling in for fellow starters Caroline Raymond and Lindsey Webster, who are struggling with injuries. Plourde picked up right where she left off, firing 5.2 hitless innings before allowing a single. When all was said and done, Plourde, who was last week's National Fastpitch Coaches Association Player of the Week, pitched the entire game, allowing two hits and one unearned run in UMass' 7-1 victory.

While Plourde admitted she was a little upset at losing the second no-hitter, UMass head coach Elaine Sortino was not concerned.

"I don't care about that stuff," said Sortino. "A 'W' is a 'W.'"

"I thought it was a pretty valiant effort on Sara's part to be able to go back-to-back against a team that swings as hard and as free as they do," added the coach.

Enjoying the UMass Softball Complex

With two more wins, the Minutewomen improved their home record to 6-0. Since 2006, UMass is 94-5-1 at home and it is currently on a nine-game undefeated streak within its own confines.

"It's our field, and we're going to protect our house and represent UMass," said Webster.

"Being in your home environment, all your friends and family are able to come," added Plourde. "I know my family can't come to away games, so when they're here it preps me even more. I think it helps having

Minutewomen go unbeaten against Dukes and Bonnies

By Jackson Alexander
Collegian Staff

UMass	13
Dukes	6
UMass	16
Bonnies	10

The No. 11 Massachusetts women's lacrosse team capped off a 2-0 weekend in conference play with a 16-10 win over St. Bonaventure on Sunday afternoon.

The Minutewomen (11-2, 4-0 Atlantic 10) won their fourth-straight game in conference play and improved their record on the road to 7-0.

Katie Ferris led the way with five goals for UMass, her third five-goal performance of the season. Ferris received plenty of help, as Dayna Defliese, Jesse O'Donnell and Nina Sarcona all added hat tricks. Katie Florence recorded her eleventh win of the season and made five saves in net.

UMass outshot the Bonnies, 39-20, and put constant pressure on St. Bonaventure's goalkeeper with 32 shots on net.

Statistically, the shots taken category was not the only one dominated by the Minutewomen.

For the ninth time this year, UMass won the battle of the draw controls, collecting 16 faceoffs to the Bonnies' 12.

In addition, the Minutewomen held an advantage in groundballs (21-9) and forced the opposition into 15 turnovers, while relinquishing the ball just nine times.

Finally, UMass was successful on all 15 of its clear attempts, a major contributor to the amount of shots the Minutewomen were able to get off.

The Maroon and White used a 6-1 run over the last 22

Lyons getting others involved in offensive attack for UMass

Dan Gigliotti
Collegian Staff

Senior Jackie Lyons and the No. 11 Massachusetts women's lacrosse team are wading through their conference schedule behind the success of their offense.

Lyons, the reigning Atlantic 10 Player of the Year, is used to being the catalyst for the UMass (11-2, 4-0) offense with her goal-scoring. With a core of adept upperclassmen and a set of emerging newcomers taking up the scoring load, Lyons has played more of a facilitating role this season, and it is working out in the Minutewomen's favor.

"Even last year, we had maybe four or five [scorers], but now we have all seven people," said Lyons after a recent win against Duquesne. "We have people coming off the bench who can score, and it's great because it's hard for teams to stop us when everybody's a threat."

After scoring 29 goals in two wins this weekend, the Minutewomen are averaging 14.50 goals per game in Atlantic 10 play. The UMass offense tallied the most goals allowed by Duquesne this season in a 13-6 win on Friday and scored 16 goals for the sixth time this season in a win over St. Bonaventure on Sunday.

The Minutewomen are scoring an A-10-best 14.23 goals-per-game on the season and are getting scoring production from a number of players on their roster. Seven players currently have 10 or more goals this season and four have more than 20.

Junior attacker Nina Sarcona (17 goals, four assists) scored her first hat trick this season with three goals against the Bonnies. Junior midfielder Dayna Defliese (seven goals), last week's A-10 Defensive Player of the Week, scored

Smith lifts Minutemen past Tigers in OT

By Herb Scribner
Collegian Staff

UMass	9
Tigers	8

When senior Ryan Hantverk knotted the score at eight apiece with one second left in Sunday's game against Towson, the No. 18 Massachusetts men's lacrosse team was thankful just to remain alive in the game.

With one minute, 55 seconds to go in the overtime period, the Minutemen grabbed the victory with a late-breaking score by Kyle Smith, winning 9-8 against their Colonial Athletic Association foe.

"I was lucky enough to be there to catch it out of the air," said Smith. "It's a great feeling. We're at the point in our season when every game's a must-win."

"It was a very tough-fought win," said UMass coach Greg Cannella. "We made some big plays down the stretch. I thought the game was like watching paint dry for the first three quarters, and then in the fourth quarter it heated up and became a very exciting game for the fans."

The match featured strong individual performances as well, despite the Minutemen calling it a group effort following the game.

Though Smith and Hantverk will be remembered as the men who secured the victory, sophomore Will Manny provided an impressive offensive effort, tying his career-high in goals with four.

Manny's goals kept the Minutemen (7-3, 2-1 Colonial Athletic Association) from trailing significantly throughout the game. When the Minutemen found themselves down by a pair to the Tigers (2-8, 0-3 CAA), Manny sent in two scores that cut the lead back to one – which allowed Hantverk to score his game-tying goal 2 minutes and 39 seconds later.

"Togetherness, the brotherhood [and] the ability for them to come back and make the big plays when we needed to, it's a really good team victory," said Cannella. "It's really important for this team...to move forward."

Both teams notched 32 shots over the five periods of play and differed by one in successful face-off attempts, with the Tigers gaining the advantage.

UMass started off the contest with two goals in the first quarter and held the Tigers scoreless. Unassisted goals by Manny and Art Kell in the opening nine minutes gave the Minutemen their first quarter lead, a time period during which they've struggled to produce offensively.

Although TU came right back in the second quarter with goals from Andrew Hodgson and Tim Stratton, UMass stormed into the picture again with two straight goals from Ryan Hollenbaugh and Greg Rushing, who came back last week after being out with an illness.

After the teams traded goals in the third, one coming from Manny and the other coming from Towson's Matt Hughes, the Tigers opened up the Maroon and White defense for a 4-0 run that featured another goal for Stratton and two straight scores from Pat Britton.

Down a pair, Manny worked his magic to cut the lead on two separate occasions before Hantverk's game-saving goal and Smith's eventual game-winner.

Though he didn't score a goal, Anthony Biscardi provided some offensive moves that kept the Minutemen in the game, notching two assists and a groundball. The Tigers picked up 11 more groundballs than the Minutemen over the course of the game.

Tim McCormack didn't play at his usual level, making 10 saves with eight goals allowed.

With the Tigers out of the way, the Minutemen finish off a two-game road series which began with a win at St. Joseph's, as they return back to Garber Field next Saturday to take on Drexel. Following the Warrior Classic against Hofstra to be played at Rentschler Field in Hartford the following week, UMass will complete its regular season schedule against Delaware at home.

Mosgrove shoots to the top

UM guard takes 3-point crown at 2011 Final Four in Houston

By Nick O'Malley
Collegian Staff

Cerie Mosgrove's got a fever and the only prescription is more 3-pointers.

It's something that's carried her through her college career and came to a culmination on March 31 in Houston, Texas, where Mosgrove had been invited to the 2011 State Farm Women's 3-Point Shooting Championship.

"[It's] kind of like an addiction," she said.

The senior guard from Massachusetts, which was knocked out of the first round of the Atlantic 10 Tournament by Charlotte back on March 4, didn't think she would ever don the Maroon and White again until she got the invitation over a week after the Minutewomen had been eliminated. On March 31, though, Mosgrove was set to face off against seven of the nation's best 3-point shooters, all of whom represented schools that participated in the NCAA tournament.

Four weeks removed from her college career's assumed conclusion, Mosgrove was a "Little Sharpshooter That Could" from a struggling team that was in the midst of some the biggest names in college basketball.

"I definitely felt like I was in elite company. It was really top players. Close to everyone, if not everyone had been in the NCAA Tournament. Some girls had been in the Sweet 16 and just finished," said Mosgrove. "I definitely felt honored to be on that level. Clearly we weren't up to that caliber this year."

As she finished her final round in the women's competition, with the title already clinched with 10 shots to go, the announcers for the ESPN broadcast questioned why none of them picked the nation's leader in 3-point field goal percentage.

"Well, that would be too easy," one of the announcers responded.

It almost was. Mosgrove almost defeated the men's 3-point shooting champion in the final round, losing by one basket. However, with a 49.7 percent field goal percentage, she was the most accurate 3-point shooter (that took over 100 3-pointers) in women's basketball during the 2010-11 season and, with about four weeks off between her last game and the competition, had just sealed the title at the biggest stage in college basketball, the Final Four.

But it wasn't always that way.

Inside-out

Standing at six feet tall, Mosgrove has solid size for a guard in women's basketball. In college, she has never played with a post player that stood more than three inches higher than her. The tallest was her most recent center, Jasmine Watson, at 6-foot-3.

Her size, however, did not escape the attention of Mosgrove's high school coaches back in Needham, Mass. At Needham High School, Mosgrove was always one of the tallest players on the team, which usually forced Mosgrove inside into the post.

It worked for Mosgrove, who finished as the leading scorer in school history for men and women with 1,600 points, which was enough to catch the eye of then-UMass coach Mamie Dacko.

Dacko, who just finished her first year as an assistant coach at Rhode Island with her college teammate, Rams coach Cathy Inglese, offered a scholarship to Mosgrove early on in the recruiting process.

UMass senior guard Cerie Mosgrove (12) won the national women's 3-point shooting contest as part of last week's Final Four festivities in Houston.

PVLSI receives $1.5 million research grant

Researchers at the Pioneer Valley Life Sciences Institute will expand their breast cancer investigations thanks to a $1.5 million grant announced Monday.

The Pioneer Valley Life Sciences Institute (PVLSI) announced Monday that it has received a grant of $1.5 million from the cancer research organization Rays of Hope Walk Toward the Cure of Breast Cancer to establish a new Springfield center for breast cancer research.

The PVLSI, an independent non-profit devoted to biomedical research, which was established nine years ago through a partnership between the University of Massachusetts and Springfield's Baystate Medical Center, will receive the grant over a five-year period beginning this year, with the funding going towards improving and broadening ongoing breast cancer research there, according to a Monday UMass News Office release.

According to the release, the funding will in part go towards expanding the Institute's scope of research, as it will use new technology at its disposal to "generate, capture and analyze data on a much larger scale," according to the release.

Proceeds from Rays of Hope, a breast cancer walk organized by the Baystate Health Foundation, will be the basis of the award's funding pool. In the release, Director of the Baystate Foundation's annual fund and events Carol Baribeau said the donation illustrates the walk's continued importance and positive

Lecturer discusses how to feel good about sex

By Nancy Pierce
Collegian Staff

"It's like riding the wave, if you learn how to master the energy," said Joyce Joseph, a sex therapist and the former clinical director at the Human Sexuality Institute of Washington, D.C.

Students interested in receiving extra credit for their Public Health 160 class and others interested in learning about sexual health filed into room 160 of the Isenberg School of Management at the University of Massachusetts Wednesday night to participate in the discussion "Sex: Getting it Right" led by Joseph.

The discussion focused on sexual health and trying to understand the dynamic of sexual pleasure versus pain.

Joseph commenced the discussion with a breath, reminding the audience it should "feel comfortable with your genitals, not as something that's just down there." She then talked about anxiety and nervousness surrounding sex in our society.

Joseph explained how her work entails analyzing sexual functioning issues for both men and women and determining whether the issue she examines is a medical one or a psychological one. Joseph said those who experience sexual pain undergo a "heroic journey," explaining the range of sexual pain from benign to diseases with no cure.

She went on to demonstrate sexual energy and libido as what she called life forces that move throughout the body.

"When energy is expressed sexually, it has an erotic flavor to it; when it's expressed in the heart, it has a quality of love," Joseph said. "Our culture is split between love and lust."

Joseph said erotic energy follows a wave-like pattern flowing toward an orgasm, rather than a linear one. She said of the emotional complications that sometimes come with sexual relations that she feels the two strongest emotions which block sexual energy are anger and anxiety. She said pain often overrides erotic feelings.

One student in the audience asked several questions throughout the discussion. Nicole Margaritonda, a sophomore communications major, asked if it is "hard to achieve a g-spot orgasm."

Joseph replied that the "g-spot orgasm" is anatomical, because she said some women have more nerve endings than other women. Joseph also brought up what she said is a controversial new theory that the g-spot orgasm is actually a clitoral orgasm from inside the female genitals.

Another topic the students were focused on was birth control pills. Margaritonda asked about the effects of being on the pill for a short period of time. Joseph advised her that each individual should make an educated decision on how the pill might affect their body.

Joseph also discussed various sexual health-related conditions women can contract, including Vaginismus, which she said is a muscle spasm and can be turned around with the right treatment, and Vulvodynia, a pain in the vulva which she said is more complex and has no known cause.

Carmel Kelly, a master's of public health candidate, public health teaching assistant and a community educator for students in the Holyoke area, spoke next, noting that this discussion looked at a variety of sexual health issues which her classes examine, but pointed out that this talk was distinct in that it focused on pain and pleasure, and that she feels pleasure is mostly left out in discussions.

Kelly discussed Vulvodynia, which she said 18 percent of women may have. Kelly explained that "it's not really talked about because it's not understood and there's a lack of support."

She described it as a syndrome causing inexplicable pains in the vulva, as well as burning, stinging and irritation.

"It's not diagnosed the way it should be," she said. "Women on average will go through three doctors before being diagnosed."

She said she feels the issue is not a high priority in terms of funding and research because she feels it's a highly misunderstood condition. Kelly also spoke about a degree of shame women endure while experiencing pain from Vulvodynia.

She said women who suffer from the condition feel like "defective sexual partners," adding that she feels to alleviate some of this shame women feel, more support needs to be available through public education and access to support groups.

MA nuke sites under scrutiny

By Melanie Mueller
Collegian Staff

After the recent Fukushima Daiichi disaster in Japan, nuclear reactors throughout the United States have come under increased scrutiny, and reactors in Massachusetts have been no exception.

Governor Deval Patrick, Massachusetts Senate President Therese Murray, and House Speaker Robert DeLeo have signed a letter calling for the United States Nuclear Regulatory Commission (NRC) not to proceed with the Plymouth, Mass., Pilgrim Nuclear Generating Station's application to renew its license, which is set to expire in June of next year. Murray has also called for federal officials to require that spent fuel rods at the plant be moved from wet storage pools to dry cask storage, which is considered more stable.

The Pilgrim Station began operations in 1972 and is currently the only nuclear power plant operating in Massachusetts. Operating on low-enriched uranium fuel, it produces 10 percent of the electricity generated in the Commonwealth, according to the United States Energy Information Administration. Its reactor is a General Electric boiling water reactor, the same type of reactor used in the Fukushima Daiichi plant.

In Massachusetts, it is only necessary for the NRC to relicense a plant for it to continue operation. In other states such as Vermont, where the future of the Vermont Yankee Nuclear Power Plant is in question, both the NRC and the state must relicense a plant.

Although it is the only operating nuclear power

NUCLEAR POWER from page 1

plant in the Bay State, Pilgrim is not the only nuclear site or operating reactor in Massachusetts. Another power plant, Yankee Rowe in Rowe, Mass., was closed in 1992, but spent fuel is kept on the site in dry cask storage. Non-generating nuclear reactors are also maintained in Massachusetts for research purposes at the University of Massachusetts Lowell, the Massachusetts Institute of Technology (MIT) and Worcester Polytechnic Institute (WPI).

MIT's reactor, a five-megawatt (MW) tank-type reactor which began operating in 1958, is the second-most powerful nuclear reactor at a university in the country. It uses highly enriched or weapons-grade uranium, and is located in Cambridge.

The UMass Lowell and WPI reactors are swimming-pool style reactors, a design in which the core is cooled by direct submersion in a pool of water. They were built in 1975 and 1959 respectively. UML's reactor operates on one MW maximum power, and the WPI reactor on 10kW. In 2004, UMass Lowell switched to low enriched uranium fuel from high enriched, and both the UMass and WPI reactors operate on this fuel.

According to University of Massachusetts physics professor Monroe Rabin, who has research interests in high-energy physics and medical physics, low enriched and high enriched fuel do not pose different health risks.

"It would be a question of what other elements are in the enriched fuel rods," Rabin said.

In 2005, ABC interns posing as college students investigating security practices at research reactors across the country attempted to gain entry into a number of these reactors, including those at UMass Lowell, MIT and WPI. The interns were unable to gain access to the reactors at the three Massachusetts schools, but noted that they were all located on the universities' campuses in close proximity to populated areas.

Massachusetts periodically experiences earthquakes, though few like the ones which have rocked Japan. The strongest quake in the Bay State's history registered as an 8.0 magnitude on the Richter scale in 1755 on Cape Ann, though the Commonwealth has not had an earthquake of greater than magnitude 3.5 in at least 30 years.

In Lowell, a fault called the Newbury-Clinton Fault runs through one end of the UMass Lowell campus. Geology experts there stated in an article called "Monster Earthquakes: Are we at risk?" that the fault is inactive and unlikely to pose any danger to Lowell or the area northwest of Boston in the near future. They noted, however, that earthquakes can be difficult to predict in New England because they occur irregularly.

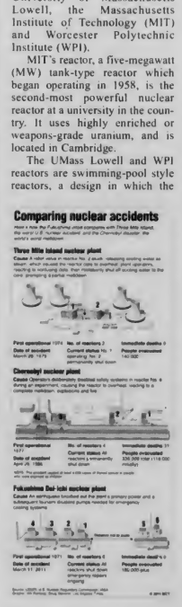
Jim Eagan, chair of the physics program at UMass Lowell and the school's designee for discussion on the research reactor, did not respond to requests for comment on the reactor's ability to withstand a natural disaster before press time.

Professor Rabin, asked about the level of radiation that could be released from a breach of containment at the Pilgrim plant, stressed that this is highly dependent on the particular circumstances of the breach of containment that would cause such a release.

Rabin also noted that while nuclear reactor accidents create panic because people "cannot see or smell radiation," he "would guess that the number of people who have died as a consequence of living near coal-fired electrical generators is much greater than the number who have died as a result of nuclear reactor problems."

According to Rabin, "The difference is that near coal-fired plants, people develop diseases slowly as a result of inhaling the particulate matter and mercury, etc. released continuously, but they don't attribute their problems to the coal."

Melanie Muller can be reached at mpmuller@student.umass.edu.



MIT.EDU

The MIT Nuclear Reactor Laboratory in Cambridge, Mass., is one of several university research facilities in the Bay State producing nuclear energy.

UMass Lowell's reactor on the school's campus narrowly abutts adjacent neighborhoods and lays near a largely-dormant fault line running through northeastern Massachusetts.

Center to focus on expanding scope of breast cancer research

PVLSI from page 1

impact on Springfield and the Pioneer Valley.

"The naming of this center is yet another indication of the enduring legacy that Rays of Hope and all its participants have created in our community," she said. "On the basis of their own experience, our Rays of Hope walkers are creating hope for future generations by supporting research that could take us much closer to a cure for the disease."

According to the National Cancer Center, operated by the National Institute of Health (NIH), breast cancer will affect 12.2 percent of American women over the course of their lives. The release states that "a major research goal of the new center is examining links between obesity and breast cancer."

Research has found that "obesity, hypertension and early indications of diabetes can increase breast cancer risk," according to the Monday release.

In the release, UMass molecular medicine and advanced genetics professor and PVLSI director Joseph Jerry said research has only uncovered a slim amount of what there is to know about potential links between obesity and breast cancer, and that this new funding may help fill in some gaps.

"We are just beginning to unlock clues as to whether obesity and breast cancer may be linked, and what those links could mean for prevention, diagnosis and management of the disease," he said. "With this more robust support to our continuing research, we are provided significantly improved tools for answering important questions about the cellular and metabolic processes that cause lesions and tumors to develop."

The center hopes to combine some of the strengths of Baystate's areas of expertise like oncology, endocrinology and pathology with UMass' well-regarded programs in polymer sciences and bio-epidemiology, according to the release, aiming to create a multidimensional program affording scientists the ability " to approach the complex and intertwined biological processes behind diseases like obesity, diabetes and breast cancer in an integrated and disease-focused fashion."

PVLSI.ORG

Dr. Joseph Jerry, director of the PVLSI, says the center may help find links between breast cancer and obesity.

The director of Baystate's Comprehensive Breast Cancer Center, Dr. Grace Makari-Judson, said in the release that this newly-strengthened pairing will help to "bring direct benefit to breast cancer patients here in western New England."

Baribeau of the Baystate Foundation said in the release that she feels expanding the Institute's base and scope will also contribute to community improvement efforts in Springfield.

"Keeping these dollars here in western Massachusetts, supporting economic and scientific development in the North End of Springfield, and supporting the type of innovative research going on at PVLSI, is really the worthiest of outcomes of our fundraising efforts," she said.

This year's Rays of Hope Walk Toward the Cure of Breast Cancer will be held Oct. 23 in Springfield and Greenfield, with a Run Toward the Cure 8K race also slated for Oct. 23 in Springfield.

—Collegian News Staff

FOUNDATION.BAYSTATE.ORG

Proceeds from the annual Rays of Hope Walk Toward the Cure of Breast Cancer walk in Springfield will bankroll new breast cancer research seeking to find links between the cancer, obesity and other diseases.

UMPD move into new East Pleasant St. home

UMASS.EDU

The new University of Massachusetts Police Department headquarters at 585 East Pleasant Street will be up, running and operational as of today.

The University of Massachusetts Police Department (UMPD) will move into its new home at 585 East Pleasant Street today, according to a release from the UMass News Office. The $12.5 million facility, under construction since 2008, will be up and running by Tuesday at 3 p.m., UMPD Chief Johnny C. Whitehead told the Office. The new station replaces UMPD's old facility in Dickinson Hall.

The 27,130-square-foot facility nearly triples the Department's current space constraints, and will be a home for all of Department's functions, including its patrol, investigation, specialized and emergency services, crime prevention and educational initiatives offices. In addition to providing some much-needed real estate for the UMPD, the building marks a shift towards a greater focus on green building here at UMass, as it will be the school's first to meet Leadership in Energy and Environmental Design (LEED) certifications, according to the release.

In the release, Whitehead said the upgrade gives UMPD better resources to serve the community.

"The new station provides our department with all of the tools that a highly-professional police force needs," he said.

Beyond its primary function as the new police station, the facility will also serve as a regional emergency dispatch center, according to the release. The dispatch center will house areas for emergency service calls, UMass' emergency notification system, the campus' fire alarm system and security camera grid, in addition to aiding UMPD in maintaining communications with its mutual aid partners, the Amherst, Hadley and Belchertown police departments.

Whitehead also said he hopes the station will help the UMPD improve community relations and provide a space for community programs.

"We have developed many crime prevention programs and initiatives for the community, such as the Citizens Police Academy, Rape Aggression Defense and active threats training," he said in the release. "This facility will allow us to present these programs to the community in a modern facility."

All phone numbers to reach the UMPD's offices will remain the same. According to the release, a dedication and an open house will be held at an as-yet undetermined time in the fall.

—Collegian News Staff

Lecturer Joseph talks pleasures, pains of sex

SEX ED from page 1

Kelly is also involved in the online support group Pioneer Valley Vulvodynia/Vulva Disease, which is intended to help shed more light on Vulvodynia and give support and an outlet for those who experience it.

Margaritonda was an avid participator in the discussion. At the close of the lecture, she said she was satisfied with the discussion and felt it was important to learn about sexual pain, even for those who don't personally experience it. She said she felt the talk helped equip her not only to better cope with the pain she said she feels, but also how to talk to a partner about it.

Nancy Pierce can be reached at npierce@student.umass.edu.

Lecturer Joyce Joseph told students last Wednesday about sexual disorders which can cause genital pain for sufferers.

Pain at the pump: Bay State drivers getting gouged on gas

The average price of gasoline for consumers paying at retail pumps in the Bay State rose 7.9 cents-per-gallon over the past week, according to the local gas price tracking Web database MassachusettsGasPrices.com. The skyrocketing price of fueling up carried prices to a statewide average of $3.68 per-gallon Monday.

Drivers in the Commonwealth are still making out better than their compatriots across the country, however, as the site's national parent, GasBuddy.com, listed the average price of gas a $3.74 per gallon across America.

Throughout 2011 prices at the pump have soared, and oil-free Massachusetts has been hit hard. Compared to April 11, 2010, prices were 91.9 cents-per-gallon higher, a leap of about 33 percent. Even this year alone oil prices have continued to soar. Prices Monday were 18 cents higher than they were a month ago, a five percent increase.

Compared to the rest o the nation, Massachusetts prices have actually escalated more drastically, according to the fuel price tracking index. Throughout America, prices are up 87.2 cents from April of last year, and up 21 cents since last month, meaning the rest of the country has seen prices jump more recently.

Picking apart campus politicking

Dan Stratford

There are two things that UMass students harbor contempt for: political parties and the Student Government Association (SGA). The former is perceived as corrupt, monolithic, authoritarian and detrimental to liberty, while the latter is seen as corrupt, ineffectual and a pretender to the throne of political legitimacy. As thoroughly enjoyable as it would be to systematically pick these two accusations apart, it would be much more beneficial to the public discourse to talk about the relationship between the SGA and the concept of political parties. The SGA senate, after all, possesses internal factions and alliances, just like any legislature worth its salt.

A common assertion heard in the SGA today is that all of the members of its leadership, specifically in the senate, are of "the same party." The oft-mentioned "same party" is that ephemeral commitment to "helping students" - vaguely defined as it is. However, the reality of the situation is that there are multiple factions that call the SGA's Senate and Executive home.

But this contempt is a trend that transcends the very history of the organization itself. The argument can be made that both preserving and, to a degree, advocating some degree of partisanship in some way not only adds to the diversity and deliberative qualities of the senate, but promotes competitive elections, intra-Senate organization and enhances one quality of the SGA that many are loathe to admit: its purpose as a trial-by-fire for future political stakeholders.

The influence of political parties, or at the very least, enumerated political associations, has been a palpable force throughout the history of the SGA, especially in the latter part of the twentieth century and the first decade of the twenty-first. In 1980, for example, there was a group known as the Progressive Student Alliance that ran candidates and proved a decisive force in that year's Senate elections, despite the postponement of its results, as cited by the October 9, 1980 edition of this venerable paper.

Most UMass students that have followed recent SGA politics - myself included - are well aware of the influence that the coalition of groups known as the "ALANA Caucus" has, and, to some extent, still does yield. This is made evident by the former presence of Caucus-exclusive seats in the SGA Senate.

There are two things that UMass students harbor contempt for: political parties and the Student Government Association (SGA).

By this author's estimation, the Caucus dominated SGA politics for at least the majority of the first decade of the twenty-first century. This primacy can be attributed, by my opinion, to the effective mobilization of campus cultural centers, as well as political organizations such as the Radical Student Union – specifically, the cultivation of a reliable "base" of voters. In short, by mobilizing support in the manner that it did, as well as endorsing charismatic candidates and taking up the mantle of ostensible advocacy for student issues, the Caucus was able to build and maintain political machinery that stood the test of time. It also involved many students in the political process on a large scale, a quality that can be respected by perceptive political observers, ideological inclinations aside.

The endemic problem with Caucus dominance, however, was its singular dominance and the effective one-party system that followed it – a system that ultimately stifled debate and made elections uncompetitive. In a sense, the Caucus' dominance made the case for the curbing of its influence.

The current generation of senators - at least those who were elected last year - remember the influence of the group known as the Democratic Voice. The author of this column would know: he ran as a Democratic Voice candidate, along with 22 others, and won. Democratic Voice was never intended to have the longevity or the organization of the Caucus and its assorted groups; it was intended to act solely as electoral machinery and not as a governing party. In fact, from my own experience, the nascent Democratic Voice coalition fragmented irreparably after Fall 2009's first Senate meetings, despite having upset the Caucus's long-held dominion. Despite having the lifespan of a butterfly, Democratic Voice pulled off a historic victory, permanently altering the balance of power in the Senate, and demonstrating the benefit of multiparty elections in ensuring competitiveness and diversity.

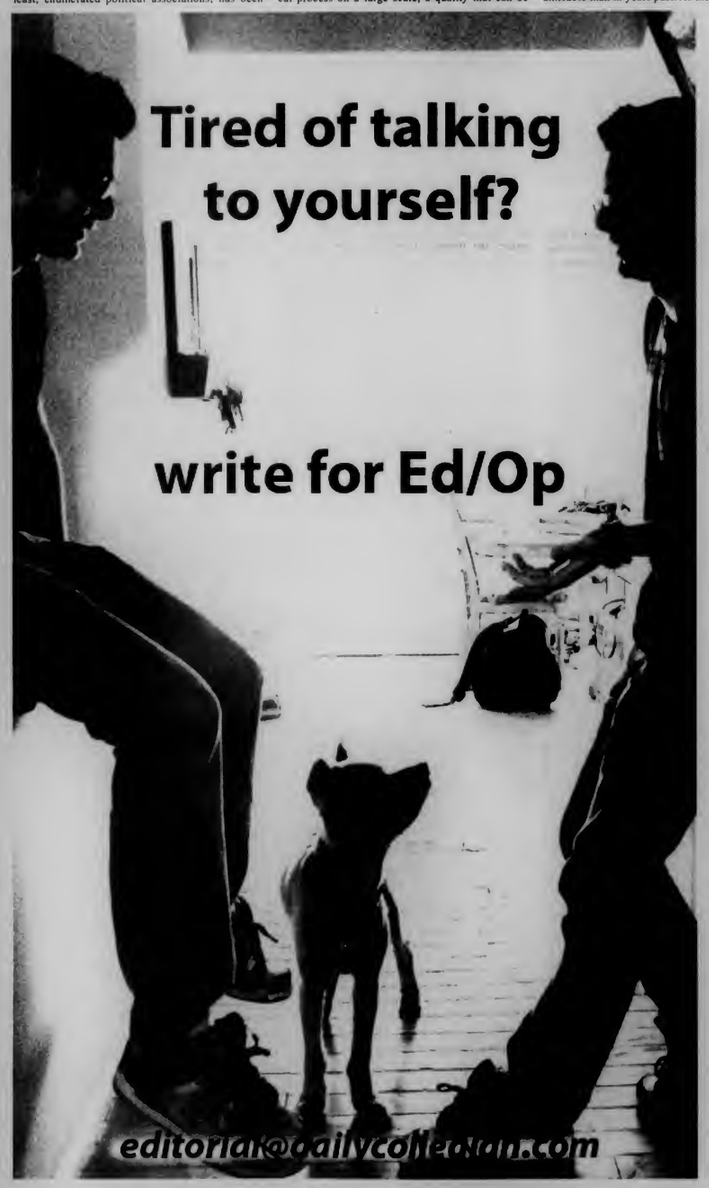
Even in today's senate, there are still palpable political divisions, though in a state much more amicable than in years past. As the current secretary of the UMass Democrats, I can attest to the fact that many of my Democratic brethren ran for and won Senate seats, as was the case with many members of the Republican Club.

Conventional wisdom would assume that - citing the intrusion of these outside political organizations - the SGA would be deadlocked in partisan cacophony. Though this supposedly "new" senate was incorrectly championed as a "new beginning" for a "post-partisan" SGA, it was a new beginning with regards to a more open and politically balanced Senate. It has maintained the existence of political alignments that serve to give life, character, and competitiveness to any legislature, without avoiding the overbearing dominance that has characterized organizations of years past, such as the Caucus.

In fact, it can be readily asserted that, just as there are at least two sides to any issue, there are at least two sides to any legislature, with the ideal of a completely non-partisan Senate simply impossible to attain. Partisanship will always exist in some form or another. What political parties do and have done - at least for the SGA - is lend a voice, cohesiveness, and balance to varying opinions on the questions of the day.

However, all of the aforementioned organizations have aided in recruiting students and ensuring competitive elections for what many wrongly perceive to be a mundane chore. They also clearly enumerate the true role of a political party: an intermediary between the government and the governed and as a crucial avenue to get the latter interested in the former.

Dan Stratford is a Collegian columnist. He can be reached at dstratfo@student.umass.edu.



A good old irresponsibility party

Lauren Vincent

The right wing needs to take a look at a dictionary before throwing around buzzwords. Last week's debate over the government was a clear indication that the GOP has no idea what "fiscal responsibility" actually means, and made it even more clear that the Tea Party has no idea what patriotism means.

Tea Party "Patriots" claim that they are the voice of the American people, but as the shutdown loomed, those who align themselves with the unofficial party, as well as some Congressional Republicans, were crying, "Shut it down!"

According to a recent CNN poll, 62 percent of Tea Party supporters said they supported a government shutdown. To be fair, this poll was taken in mid-March, a time when hopes were high for a compromise and a shutdown was considered a lesser evil.

But the frenzy that the Tea Party's anger has whipped it into fails to bring attention to the fact that a lot of Americans – the very people who they rest their party identity on protecting – would be negatively affected by a shutdown. And this shutdown wouldn't just have been a symbol of government inefficiency; it would have been an actual problem that would hurt the nation and its citizens. Those hundreds of thousands of Americans who work in the public sector would be denied payment for as long as the shutdown took. Of course, members of Congress would still receive pay, but what would have happened to those people who actually needed to be paid?

Those who were screaming for a shutdown cannot tell me that they are looking out for their fellow Americans. What the GOP was trying to pull isn't patriotic; it was a selfish and reckless endangerment of the well-being of the nation.

It's as if the Republicans are saying, "Let's stop carelessly spending money - except of course, when we're spending it on the people who need it the least."

In a recent ABC interview with George Stephanopoulos, Republican Speaker of the House John Boehner said that there was "no daylight between he and the Tea Party," and that "what they want is they want us to cut spending. They want us to deal with this crushing debt that's going to crush the future for our kids and grandkids. There's no daylight there."

Obviously there was some daylight since the shutdown was avoided due to a compromise that Boehner found adequate. Likewise, Congresswoman Michelle Bachmann stood behind the compromise. Bachmann – recently chosen as a key spokesperson for the Tea Party – caught some flack for this move.

I understand that it is in the interest of GOP politics to defend the Tea Party - after all, a considerable portion of the Republican base aligns themselves with the movement. However, I feel it is in the interest of the country for members of Congress to stop legitimizing ideas that government shutdowns are positive.

As if the shutdown wasn't controversial enough, Boehner took this opportunity to give lip service, once again, to the idea that continued support for Planned Parenthood would increase the incidence of abortion. The fact is, no government money funds abortion and keeping the threat of a shutdown alive over this issue was completely irresponsible.

No, they couldn't put this endless debate off another year; they had to fight over an absolutely useless provision just to make a point that they don't like abortions - as if we didn't know that already about the Republican party.

And for the cherry on top, Representative Paul Ryan proposed that the government cut funding for Medicare and Medicaid, two programs that provide health insurance to senior citizens and low income families, a move that 61 percent of Americans oppose.

These people all stand behind the idea that spending less will ultimately benefit us. However, will any of them actually feel the loss of what they want to take off the table? Probably not, otherwise mandating such "sacrifices" wouldn't be so easy, never mind that the Republican plan would have cut $4 trillion in taxes for corporate and high-income brackets. It's as if the Republicans are saying, "Let's stop carelessly spending money - except of course, when we're spending it on the people who need it the least."

I would urge those who support this reverse-Robin Hood policy to look up the word patriotism and tell me how that fits the definition of loyalty to the nation, because I don't think it's even close.

Comedy Stock chock full of laughs

By Kaitlyn Bigica
Collegian Staff

On April 8 and 9 at 6:30 p.m., comedians from across the country took the stage in Bartlett 65 to showcase their comedic talents and create a room full of laughter and smiles.

The Student Valley Production event, Comedy Stock, featured 10 groups, duos and solo performers on Saturday, each with unique comedic styles. The night started off with the singing guitar-playing group called the Futurenows. Each band member sang one of their original songs and their band mates backed them up on guitar.

The Futurenows played a few original songs including "When it Comes To You." and "Anne Marie." The second song had a Bob Dylan-like appeal, with singer Sean Nolan simultaneously playing guitar and harmonica. To add a comical spin to their act, the band performed an acoustic version of Aaron Carter's "Aaron's Party (Come Get It)," which the crowd sang along with.

After the Futurenows left the stage, the lights dimmed and a video began to play. The video was about two friends who were introducing a new student to the University of Massachusetts. They sang in true, Broadway style about living areas on campus like Orchard Hill. The song included the lyrics, "Orchard Hill is the perfect place to call home, if you can survive the hike." Next they sang about Central and how one can always find, "towels at the door and fans in every window." After Central came Sylvan, as they sang, "at Sylvan there's so much going on...," followed by silence as the camera captured the quiet, bare area. Northeast was called, "A great place to call home and it's really good at math." Suddenly the song broke into a rap as they panned the camera towards a Southwest girl, who rapped, "taking shots in Washington, but passing out in JQA."

After the crowd quieted their laughter from the video, Brenda!, a four-person improv group enthusiastically ran on stage and began by asking the audience to scream something random. After someone screamed "moon landing," the group broke into a scene about the conspiracy theories behind the first moon landing. They then performed another sketch about sending their son to fat camp because, if he doesn't get thinner, they won't buy him any more toys.

Following Brenda! was Northampton native Sharkee Katz. Katz took the stage and took off his shoes and jacket before launching into his performance. He began by saying, "This is going to be good," and told the audience that he used to have class in Bartlett 10 years ago when he went to school at UMass. He said he used to sit in the back of class and daydream about being "a high school teacher for three years and make lots of money. Now I'm here telling jokes for $25."

After Katz finished his act, the Dowry took the stage. The Dowry is a six-person group from Boston, Mass. and is currently a finalist in the Boston Comedy Festival. The group performed a few sketches that had the audience bent over with laughter. The first sketch involved a lawyer naming off the known aliases of a rapper to a court. The rapper had names like "Driving Mrs. Jay-Z" and "$100-Bill Store."

The girls of the Dowry then took the stage and acted as if they were at an engagement party. One girl opened up her first gift and, when she looked at it, the whole group would start cheering as if they were men at a football game.

The next scene was in a schoolroom, in which a teacher had hired two people to get her students excited about learning. The two people called themselves the nuisance team and used scenarios like drug dealing to teach the kids about math or the production of cocaine in order to teach them science.

UMass's own Mission: IMPROVable was the next group to take the stage. They ran down the aisles to get the crowd excited and jumped on the stage, where they performed funny dance moves. The group then explained that they perform short-form improv and that it's a family-friendly show with no obscene language. The performance was a series of games that included interactions with the audience.

The first game was called "pan left, pan right," where four team members formed a square. When one member of the team shouted "pan left" or "pan right," the team members had to pretend they were a different news station. They also played a game where one person would talk and the other would move their mouth to make it look like they were talking.

At the end of their performance, Mission: IMPROVable brought up past members of the group to join in the game. Jay Petrone, a member of Mission: IMPROVable said that the group gets along, "splendid, we get along splendid. Improv takes a certain amount of working together."

Team Submarine, a two-person group from New York was the next comedic group to perform. The two men, Steve O'Brien and Nate Fernald, have been performing together for five years and O'Brien said it was, "longer than any relationship I've had with a woman."

Fernald and O'Brien began by explaining their hobby of going to high schools to talk about the dangers of sexting. They said that sexting has been around for a while in many different forms, including "masturbexting, sexful intermorse or by fax machine, also know as fuxing." They acted out a scenario where sexting may occur. O'Brien played the vulnerable girl who just moved to a new school and has no friends yet with Fernald acting as the horny teenage boy.

After the laughter died down from the hilarious performance by Team Submarine, Kinda Fancy, a.k.a. Carrie Drzik, took the stage with her ukulele and began to sing. Drzik's performance started out rocky, as she forgot the lyrics to some of her songs, but she shook it off by explaining that she's awesome. She told a story about an eighth-grade boy she showed her chest to for a dollar so she could go buy a chocolate bar.

Last Friday and Saturday, UMass hosted local and nationwide improv acts for Comedy Stock. The event featured such diverse acts as UMass-based Mission: IMPROVable and Los Angeles native MC Mr. Napkins.

Drzik then sang a more personal song about a girl walking down the street under the stars. After her serious performance, she exclaimed, "Now you've seen my soul, want to see my panties?" Although there were a few glitches earlier in her performance, she finished strong and kept the audience laughing the whole way through.

After Kinda Fancy finished her performance, Los Dos Dudes were up next. The two men immediately began their performance by asking the audience to scream out something random. Someone shouted "laser" and they started their act. Each sketch blended into the other, and the two men were throwing their bodies all over the stage for a comedic effect.

Next up was the best performer of the night, MC Mr. Napkins from Los Angeles, who got the most laughs from the crowd. He began by explaining that he has been in love with hip-hop for a while, and his favorite artist is Big Pun. After rapping about a Big Pun song, he began his rap about toothpicks. In his rap he said, "Napkins purchase picks by the hundred pack" and "use it to remove food particles, you'll have women taking off their clothing articles."

The last performer was Mike Duffy, a comedian from New York City. Duffy closed the night off with great jokes and the crowd cheered at the end to commend all of the amazing performers. The night was full of fun, laughs and great performances. Everyone appeared to leave with smiles on their faces as they discussed their favorite jokes and how successful the night was.

Cinema with a 'Soul'

By Kate MacDonald
Collegian Staff

Awesome surfing sequences, a shark attack and great panoramic shots of a tropical paradise sounds like a new action movie has hit the box office. Actually, "Soul Surfer" is much more.

"Soul Surfer" is based closely on the real-life struggles of Hawaiian-born Bethany Hamilton. Hamilton, played by AnnaSophia Robb, was a teenage professional surfer who, during a surfing day trip with her best friend's family, was brutally attacked by a shark. She lost her left arm, but not her surfing dreams. The young surfer merely had to learn how to get past a few obstacles first.

Robb ("Bridge to Terabithia," "Charlie and the Chocolate Factory") was definitely the outstanding star of this movie. She plays Hamilton as a multi-faceted optimist, from her happy-go-lucky days as a teenager hanging out with friends to the frustrated girl who has to learn how to do everything differently. Some may find it strange that she never really gets upset with her situation (except for one surfing mishap), but that can be attributed to her unwavering faith.

"Soul Surfer" may not be everyone's cup of tea for one particular reason – it's heavy on Christian values and faith. Carrie Underwood contributes largely to this component of the film as Sarah, a sort of youth group leader. Though the film as a whole isn't the sort that shoves religion down audiences' throats, all of the singer's scenes involve keeping the faith.

Carrie Underwood makes her acting debut in "Soul Surfer," based on the true story of Bethany Hamilton.

Somewhat surprisingly, Underwood didn't provide any songs for the soundtrack of her big-screen debut. While her performance wasn't awful, most notably one especially emotional and strong scene right after the attack, it is evident that this is Underwood's first venture into acting. Perhaps with time her acting chops will get better, but it was a valiant effort.

The remainder of the cast was outstanding in their own right. Robb definitely carried the film, but the likes of Dennis Quaid and Helen Hunt (as the Hamilton parents) and Ross Thomas and Chris Brochu (who played Bethany's brothers Noah and Timmy, respectively) only added to the movie. Each character was well- developed and exhibited just the right amount of shock, anger and support.

Another actress making a serious venture into acting in "Soul Surfer" was legendary actor Jack Nicholson's daughter Lorraine. Though she's played bit parts in movies like "Click" and "Something's Gotta Give," she plays Bethany's best friend and fellow pro surfer Alana Blanchard. She's a great performer, and this will not be the last we see of her.

The soundtrack to the film was particularly good. While natural enough to blend into scenes perfectly, the talent featured was noticeable. Fairly well-known artists such as Michael Franti & Spearhead and Mat Kearney add two of the best songs of the film, but it's Chris Sligh that shines with a slower rendering of Katy Perry's "Firework."

Perhaps the best part about "Soul Surfer," besides its obvious acting achievements, is the cinematography. In fact, "Soul Surfer" may be one of the most well-shot films of the year to date, thanks to cinematographer John R. Leonetti. Featuring amazing high-octane surfing scenes and great panoramic views of the Hawaiian coastline and mountains, the camera shots range from simple and beautiful to complex and captivating, especially the underwater shots.

The camera stays steady for the most part, except for when it is shaky and almost sickening from the moment of the shark attack to Bethany's arrival at the hospital. Instead of being annoying, this adds heightened uneasiness and action to the sequence.

"Soul Surfer" is one of those films that, after the audiences view it, they know it's destined to do great in both the box office and during awards season. It truly has something for everyone: awesome surfing scenes, emotional trials and even wit. As if that's not enough, it's a story of dealing with some of the biggest obstacles a person can face, and finally overcoming them with strength and grace.

North Hadley's Sugar Shack makes maple syrup and smiles

By Alissa Mesibov
Collegian Staff

The first thing one notices about the North Hadley Sugar Shack of Hadley, Mass., is the smell. The intoxicatingly sweet scent of maple syrup hits before one has a chance to enter the building.

The producer behind the sugary amber-colored liquid is Joe Boisvert, 35, who owns and manages the farm and sugarhouse along with his brother John. The two have been in the maple syrup business since Boisvert was seven-years-old.

"We started off producing maple syrup, and we've been doing that since we were little kids," Boisvert said.

Before becoming the local attraction it is today, the Boisvert farm was purely for growing crops. They continue this on the 150 acres of land not occupied by the Sugar Shack, the restaurant, or other attractions housed on the farm. Boisvert sells both vegetables and syrup to local markets, although he recently made a breakthrough into the world of corporate supermarkets.

The six-month process of getting his syrup into Hadley's Whole Foods Market required Boisvert to get registered bar codes, which cost approximately $1,000 to $1,500. All this was just to get his product in one local branch. From here, Boisvert hopes to get his products placed in more stores.

"Farmers are no dummies...you have to be a businessman," Boisvert said.

This much appears to hold true for Boisvert, who is constantly adapting his farm to accommodate changing technology. It is essential that he makes these changes in order to keep up with competition. The Boisvert Farm is one of 292 farms in the state of Massachusetts that produce maple syrup, according to the 2007 Census of Agriculture. For example, Boisvert began utilizing a reverse osmosis process, which pushes the water out of the sap to make the syrup.

Maple syrup is collected through a tubing system that connects the tapped trees to collection bins at the bottom of a hill. At this point, the sap is 98 percent water, according to Boisvert. They then go through a boiling process. It is not until the sap hits 220 degrees Fahrenheit that it becomes maple syrup. This is why the reverse osmosis process is so useful; it cuts that time down because Boisvert does not have to boil out the water. This in turn allows him to produce more syrup in the same amount of time.

From there, syrup can be collected, or it can be boiled to even higher temperatures to make other maple products that the sugar house sells, like maple candies, maple cream and maple sugar.

Another thing Boisvert has had to adapt to is the demand for entertainment. Originally, the boilers were in the middle of their restaurant, but the insurance and safety issues prompted them to separate the two. This proved problematic for Boisvert, since the boilers often kept customers in the restaurant longer.

The solution was to place the boilers in adjacent rooms that connect through a doorway. This turned out to work to Boisvert's benefit, since customers can only be in one place at a time, so they stay in the Sugar Shack longer. When they or their children get hungry again, they are more likely to purchase foods in the store.

This logic proved to be invaluable. Soon, the Boisverts added other attractions to their property, including the petting zoo that sits behind the Sugar Shack. Children are the most likely to become bored or hungry the fastest, so now they stay on the property longer, due to all the attractions. When they tire out and want to see something different or become hungry, many parents take them to the store to buy snacks.

Such tactics sound strange to apply to agriculture, as business strategy is more often associated with New York City CEOs than rural Massachusetts farms. Nevertheless, these strategies have proven important for Boisvert, and he has become impressively masterful at using them, especially considering he learned everything he knows on the job, and not at an agricultural school.

"My philosophy has been [that] if you're a hard worker and are willing to take risks, then you will be just as fine as a rocket scientist," Boisvert said.

Boisvert's philosophy appears to have paid off for the last 15 years. Judging by the packed restaurant and boiler room, it very well may continue to do so, as well.

The North Hadley Sugar Shack closes for the season on April 17.

Alissa Mesibov can be reached for comment at amesibov@student.umass.edu.

The Sugar Shack is one of only 292 farms in Massachusetts that produces maple syrup.

Starting pitchers struggle

OPENER from page 8

Charlie Benson, who was tabbed with his first loss on the season.

Despite the overall shaky outing from Dennis Torres on Saturday, the former walk-on who converted from third base to pitcher showed signs of consistency and even dominance in the middle frames, before succumbing to fatigue in the later innings.

"The key is repletion in your mechanics. I tend to go across my body on my follow through when I get tired," said Torres after the game Saturday. "Coach has really been on me about that, and I feel, with more time and experience, I will be able to get better at that."

The Lawrence, Mass. native compliments fellow pitcher and veteran among the staff, Ben Hart, for his advice and tricks to use on the mound.

"I really look to a lot guys, but especially Ben, because he really focuses on making sure his mechanics are spot on every time out there," said Torres. "It's advice I take to heart and I'll continue to improve upon my own."

Friday's victory came from a familiar source as Glen Misho, despite delivering five walks and six hits for four earned runs, battled his way through six innings of work, throwing 121 pitches to improve to 4-1 on the season.

Another positive performance on the mound for UMass was junior Leif Sorenson, who registered a combined 4.2 innings of work over all three games in the series, allowing no earned runs on his watch, while striking out three.

The UMass lineup combined for a near .300 average for the series, delivering 38 hits, including 17 in Friday's game. However, eight of them came off the bat of Copa, a big performance that all but assured his return to midseason form. The Haverhill, Mass. native combined for seven runs batted in over the three games, four of them coming when he launched a grand slam on Saturday in the fourth frame.

"I struggled in the beginning of this year, as I did last year around the same time, but I've been able to read the ball better with more pitchers delivered," said Copa after Friday's 4-for-5 performance. "I was getting a lot breaking balls in the first couple of at-bats in the series, so I decided to lay off of them until I could get something different. In my third at-bat, I waited for a fastball and when I saw it, I decided to jump on it."

Freshman Dylan Begin went a combined 3-for-8 over the final two games, including a double in the bottom of the sixth on Sunday to continue the momentum for the Minutemen, as they tallied two in that frame to pull within one run.

"We're always just trying to scrap, no matter how many outs in an inning," said Begin on Sunday.

When it comes to having to make the necessary adjustments at the plate to pitching at the next level, Begin expressed his biggest challenge as, "coming up with a solid swing against breaking balls. It's not as easy as it was to hit them in high school. That's why I'm trying my best to get into deep counts and hopefully see a fastball and drive it. Luckily, I got into a situation [there in the sixth], where I was able to see a ball I liked and I was able to drive it deep."

UMass will travel to Siena on Tuesday before returning home to host Boston College on Wednesday.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Right-hander Glen Misho throws a pitch in a game over the weekend against Dayton. The junior earned the lone victory for UMass in the three-game set.

Blasik earns Player of the Week in A-10

A-10 from page 8

after scoring two runs.

Rhode Island held on for the win, allowing Saint Louis to score only once more in the top of fifth.

On Sunday, the Rams defeated the Billikens 4-2 in the rubber match to win the series.

All of the runs for URI came in the fourth, fifth and sixth innings as the Rams took a 4-1 lead. Saint Louis managed to score again in the eighth but it wasn't enough to close the gap.

A-10 accolades

La Salle's George Smith, Jr., Dayton's Brian Blasik, Charlotte's Corey Roberts and Saint Louis' Alex Alemann were all awarded honors for outstanding performances this week.

Smith was awarded Rookie of the Week after filling in for injured starter Tony Negrin. The freshman went 6-for-12 during the week, with six RBIs and two runs.

The Player of the Week award was given to Blasik after he recorded his second home run this season against the Minutemen. Blasik helped drive in five RBI and had eight hits for a batting average of .500.

Roberts and Alemann both were awarded the Pitcher of the Week. Roberts pitched his third shutout of the season against Saint Joseph's in an 11-0 win. Alemann helped the Billikens to a 7-1 victory on April 8 against Rhode Island, striking out three and walking two.

Amy Chaunt can be reached at achaunt@student.umass.edu.

COURTESY RHODE ISLAND MEDIA RELATIONS

Jeff Roy led Rhode Island to a victory over Saint Louis, recording two hits and two RBIs.

UNC gets timely offense

TOP 25 from page 8

the score in the seventh for Tech with a solo home run to left field. Coleman scored a run in the ninth inning for UVA, but Reed Gragnani grounded into a double play to end the game.

The Jackets will host Georgia Tuesday night while Virginia will take on Georgetown at 5 p.m.

FSU loses series to UNC

North Carolina had a unique strategy to defeat Florida State and claim the series win on Sunday afternoon. The Tar Heels used one inning to accumulate seven hits and seven runs, earning them to a 7-6 win over the Seminoles in Tallahassee, Fla.

Florida State started strong, leading 2-0 after the second inning. However, in the top of the third, North Carolina turned the tables. Freshman Tom Zengel had a lead-off walk and was put in scoring position after Seth Baldwin hit a double down the right field line. Ben Bunting, Levi Michael, Tommy Coyle and Jacob Stallings brought North Carolina to a two-run lead after executing four-straight RBI singles. Colin Moran, the Atlantic Coast Conference's RBI leader, added to his total and the Tar Heels' score by plating Coyle and Stallings after a single to left. The order trickled back to Zengel, who grounded out to first base but platted Moran for a 7-2 lead.

The Seminoles came close to a comeback. In the fifth inning, third baseman Sherman Johnson hit an RBI double and shortstop Justin Gonzalez hit a RBI single, leaving Florida State to trail by three. Mike McGee gave the Seminoles hope after hitting a two-run homerun in the bottom of the sixth. However, no Florida State player would make it past second base for the remainder of the game.

North Carolina will face in-state foe East Carolina on Tuesday night before taking on conference rival NC State on Friday.

Trevor Bray can be reached at tbray@student.umass.edu.

MARIA CMINSKI/COLLEGIAN

Senior guard Cerie Mosgrove won the 2011 State Farm Women's 3-point Shooting Championship, defeating Iowa State's Kelsey Bolte in the final round by a 19-11 margin.

Mosgrove wins shooting title, comes a long way in UM career

MOSGROVE from page 1

However, both parties knew that with Mosgrove's size, she'd have to adjust her game to the college level.

"I was the tallest one on my team in high school," said Mosgrove. "So, inevitably, you're going to be thrown into the post and do all of that. And I thrived off of that for a few years, but I knew my goals were higher than that and I wanted to go play in college.

"It's been my goal since ninth grade. That's when I knew for sure that I wanted to play Division I college basketball and was told by people that I wasn't going to be tall enough to be a giant center or anything."

With that in mind, Mosgrove came to the realization that the best way to play in college was to develop an outside shot, a process that started while Mosgrove was participating in the local camp circuit in her area.

Mosgrove's shot, which today is a lower, unorthodox style, was once a fairly standard shot that she'd modeled after varsity players that she watched during the camps that popped up around her town.

When Mosgrove entered ninth grade, she began working with her eventual AAU coach to develop a 3-point shot. It was then that her shot began to drop and move across her face. At that point, Mosgrove didn't have the strength to shoot from 3-point range with a classic shot.

There's no exact time or place that Mosgrove began to change her shooting style. But around that time, Mosgrove began to favor bringing the ball up from her left to her right side, which she says feels more natural.

"There's no good explanation for it," Mosgrove said. "But there wasn't ever a set time where someone said, 'You should shoot this way.' It just kind of happened that way; basically just learning to shoot threes changed it a little bit.

"It works, so I never fixed it."

"The Sniper"

Mosgrove didn't start playing an impact role until her sophomore year, where she, along with a perfect storm of other shooters, set the stage for "The Sniper."

A product of the imagination of Matt Goldstein, also known as "Matty G," Mosgrove's new nickname suited her college play style perfectly.

"It was pretty clever on his part and everyone here seemed to adapt it and really like it. It sticks and it kind of fits," Mosgrove said. "I never would have thought of the name before this, but I do embrace it now."

As a sophomore, Mosgrove was just one of four Minutewomen who attempted over 80 3-pointers and made over 30 percent of them. Mosgrove was second on the team in 3-pointers with 51, behind then-breakout-freshman Kristina Danella, who had 58.

Danella, who caught on offensively towards the end of the season, eventually supplanting Mosgrove for a starting spot in the lineup. The freshman finished the season by starting 19 games, compared to Mosgrove's 11, and finished second on the team in scoring behind then-senior Stefanie Gerardot.

Coaching Mosgrove was Dacko, who was in her seventh season at UMass and had been working with new men's assistant coach Vance Walberg to install the dribble-drive offense that was being installed with the men's team at the same time. At the time, though, Mosgrove had been limited as a stand-still shooter and would shy away from shooting if she missed a few shots in a row, says Dacko.

Mosgrove, who Dacko says "has a gift in shooting the ball," hadn't put together a complete game and struggled with her confidence at times when she wasn't on a streak. By the end of Mosgrove's junior year, she had begun the season as a starter again, only to fall out of the starting lineup again, finishing the season with an average of 3.8 points per game while making less than 30 percent of her 3-point attempts. Despite playing in all 60 games during her sophomore and junior seasons, Mosgrove started just 23.

Breaking the addiction

At the end of the 2009-10, Dacko's contract with the Minutewomen expired and was not renewed. So, for the 2010-11 season, all that Dacko saw from The Sniper came from the URI film room or from across the court. What she saw, though, was no longer just a sharpshooter.

"Through the course of the years, you wanted her to be able to penetrate," Dacko said. "She's a great stand still shooter, but she had to be able to put the ball down and penetrate. And in the A-10 you have to do both."

After being eighth on the team in scoring and rebounding, Mosgrove lead the Minutewomen in both categories as a senior, scoring a team-high 408 points (13.6 per game) and bringing down a team-high 195 rebounds (6.5 per game).

Dacko said that when Mosgrove first got to college, she wasn't comfortable with her back to the basket, struggled in post play and relied too much on confidence in her shooting. However, during her senior campaign, the URI assistant saw some huge changes in her now-opponent, who was crashing the boards and starting to have a better presence down low.

"Cerie was very good shooter when she got to UMass," Dacko said. "She had to learn how to defend on the inside. That's challenging in itself. At her size, it's easier to defend a post player than an outside player. When we brought her in, she was much better guarding an outside player. The biggest thing with Cerie's development, her post defense and rebounding."

Dacko also saw a more confident shooter who, even when she faced a cold streak, continued to believe in her shot with the knowledge that it would come back to her. That confidence is something Dacko saw firsthand when the Minutewomen face the Rams in January of this year. Mosgrove had a double-double with 21 points and 11 rebounds while setting a career-high in 3-pointers in a game with seven during the contest.

Mosgrove's developments comes as a strange circle, going from quasi-center to sharpshooter to a multidimensional 2-guard. In the end, she'll be remembered as The Sniper and a 3-point shooting champion. The "crazy" big trophy she now has from winning the competition is certainly evidence of that.

But her legacy on the court is something much more complex than just being a good shooter from long range. The best free throw shooter in the conference, the only player who was recruited from Massachusetts, Mosgrove went from a stand-still shooter to a slashing, post-playing, rebounding, featured scorer.

At this point, "The Sniper" is just inaccurate.

UMass wins opener, loses series to Dayton

UMass	9
Dayton	5
Dayton	8
UMass	6
Dayton	6
UMass	4

By Scott Cournoyer
Collegian Staff

Despite a combined 8-for-12 at the plate from first baseman Peter Copa and a victory in its home opener Friday evening, the Massachusetts baseball team lost two of three against Atlantic 10 foe Dayton over the weekend.

After taking an early lead in the first inning of the series finale on Sunday, Dayton (16-16, 4-2 A-10) went on to score five consecutive runs through the first five-and-a-half innings of the game, eventually claiming a 6-4 victory over the Minutemen (9-14, 3-3 A-10). Junior right-hander Rob Machado surrendered three earned runs on nine hits, walking one while striking out three over 6.2 innings.

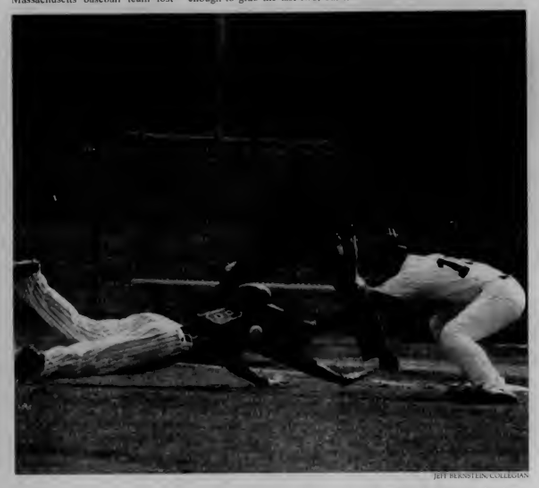
"It's definitely a tough pill to swallow, considering we wanted to at least come out of here with two out of the three games," said third baseman Matt Giedman following Sunday's game. "We were able to get the first one and played well enough to grab the last two, but it just didn't work out for us. All we can do is look forward to our games this week and look ahead to Temple next weekend when we get back into A-10 play."

The starting pitching wasn't the telltale sign of defeat for UMass, even though the starters combined to deliver 11 earned runs over 18.1 innings of work. Bullpen issues and timely mistakes by the defense spelled the final outcome for the Minutemen, including three errors on Sunday. On Saturday, with a 6-4 lead heading into the top of seventh, the bullpen allowed the final four runs of the game, all of them coming off seven hits over a combined two full innings from pitchers Joe Popielarczyk and

See OPENER on page 6

JEFF BERNSTEIN/COLLEGIAN

Despite claiming its home opener on Friday, the Minutemen dropped games on Saturday and Sunday to Atlantic 10 opponent Dayton. UMass will return home on Wednesday to take on Boston College.



JEFF BERNSTEIN/COLLEGIAN

First baseman Peter Copa was red hot over the weekend, hitting 8-for-12 against the Flyers in the three-game series. The senior is second on the team in batting average with a .359 mark.

Copa crushes Flyers' pitching, catches fire

By David Martin
Collegian Staff

Hitting a baseball is considered by many to be one of the hardest feats in sports. When one considers how little time one has to react to a pitch, how good one's swing must be what kind of pitch the pitcher could hurl one's way and all the other mental and physical factors that take place during an at-bat, it would seem incredibly difficult to get a base hit, never mind a home run, in any higher level of play.

Senior Peter Copa, however, had little trouble hitting in the recent three-game series for the Massachusetts baseball team.

Copa, who plays both third and first bases for the Minutemen (9-14, 3-3 Atlantic 10), saw great success at the plate against the Flyers (16-16, 4-2 A-10). He went 8-for-12 on the weekend, with three extra-base hits - a triple and two homeruns, one of which was a grand slam. Copa was also hit by a pitch, earned a walk, had seven runs batted in and reached home safely four times.

With his average continuing to climb throughout the course of the season (an impressive .359, the second-highest on the team), Copa attributes much of his success at the plate to minor adjustments in his approach to opposing pitchers.

"I have been able to see the ball well for most of the year," said Copa. "With that, I just make little adjustments, stay inside the ball, stay back, and get into a hitter's count.

"I mean, I am just trying to hit fastballs and get ahead in the count. Sometimes you hit it well, and you do not get on base, while other times you do not hit it that well and still get on base. I struggled a little bit in the beginning of the year, so I am trying to pick it up here in the second half by seeing pitches more, getting use to it, and being comfortable in the batter's box."

Throughout the weekend series, the Flyers' pitching could not find a comfortable rhythm on the mound when facing Copa. Though they were able to hold him 0-for-3 on Sunday with a walk and two strikeouts, opposing pitchers could not keep Copa from making good contact at the plate for the majority of his at-bats. Copa, however, was patient finding pitches he knew he could turn into hits.

"[This weekend] I saw a lot of curveballs, so I decided to lay off of those," said Copa. "First fastball I saw, I swung at it. Same thing in my first at-bat [on Sunday], [the pitcher] was throwing me breaking balls, so I sat on them, and in my third at-bat, he threw me a fastball and I made good contact on it."

Though the Minutemen could only walk away with a 1-2 record against their A-10 opponents over the weekend, Copa's success at the plate is one of many positives for the ball club to build off of.

After all, good hitting is contagious and with players like Copa doing as well as he is, the Minutemen appear to be headed in the right direction at the plate.

David Martin can be reached at dmmartin@student.umass.edu.

49ers continue to roll

By Amy Chaunt
Collegian Correspondent

For Charlotte's baseball team, offense was the key to success over the weekend against Saint Joseph's. The 49ers defeated the Hawks Saturday afternoon and in a double header Sunday, improving their record to 8-1 in the Atlantic 10.

The 49ers were originally supposed to play the Hawks at Campbell's Field in New Jersey Friday but poor weather conditions and scheduling conflicts moved the game to Saturday afternoon at Hank De Vincent Field at La Salle.

Saturday's game was scoreless through the bottom of the third, until Charlotte senior Cory Tilton hit a sacrifice fly to score Kevin Gillespie. The lead was short-lived, however, as the Hawks scored in the top of the fifth to tie the contest.

A-10 Baseball

Charlotte broke the tie when they scored three runs in the bottom of the seventh, one in the eighth and four in the ninth. Brett Tiagwad scored a run in the ninth for the Hawks but it wasn't enough to earn the win.

The double header Sunday was dominated by Charlotte, which outscored Saint Joseph's 22-1 as the 49ers scored 11 runs in both games.

Like Saturday, the lead came late for Charlotte in Game 1 as the 49ers got on the scoreboard in the top of the fifth. From there, Charlotte scored ten more runs within the next four innings while shutting down the Hawks' offense.

In Game 2, the Hawks were able to score only once in the fifth inning, handing the victory to the 49ers. The Hawks are 3-6 so far in the A-10.

URI claims series

After suffering a loss in the first game of a three-game series, Rhode Island pulled through and defeated Saint Louis in the final two contests of the weekend.

On Friday, the Rams fell short to the Billikens, allowing them to get an early lead in the top of the first with three runs. URI came back with one run in the bottom of the first. However, with back-to-back errors in the second inning, Saint Louis was handed two runs, improving its lead to 5-1.

The Rams only had three scoring opportunities from there on out, with one runner on base in the third, fourth and ninth innings. The Billikens, meanwhile, scored two more times to claim the 7-1 victory.

Rhode Island freshman Jeff Roy responded for the Rams after the loss, recording two runs, two hits and two RBIs in Saturday's 6-2 win against the Billikens.

As a team, URI was nearly perfect in the field, making a huge improvement from the miscues that occurred in Friday's game.

Saint Louis was on the scoreboard early in the second to take a 1-0 lead. The Rams, however, came right back and took the lead back in the bottom of the second

See A-10 on page 6

JEFF BERNSTEIN/COLLEGIAN

Charlotte continued its strong play, sweeping Saint Joseph's over the weekend to move to 8-1 in the Atlantic 10.

Freshman Koumas has career outing in South Carolina win

By Trevor Bray
Collegian Correspondent

The South Carolina baseball team swept Tennessee in a three-game Southeastern Conference series this past weekend. South Carolina maintained its No. 3 position after defeating Tennessee 2-1, boosting its record to 26-5.

Freshman Forrest Koumas pitched a career-high 7.1 innings, striking out seven batters and only allowing three hits to the Vols on Saturday. Koumas let up his first and only run in the first inning from Khayyan Norfork, who singled to left field. Andrew Toles preceded Norfolk and was granted a free base after being hit by a pitch. The Tennessee runners advanced to third and second bases after a sacrifice bunt, allowing Norfork to score off of Charley Thurber's RBI ground out.

Scott Wingo had the first hit for the Gamecocks in the top of forth. The second baseman singled to center field but was putout in a double play. South Carolina remained scoreless until the sixth inning. Robert Beary set the precedent for the inning after singling to left field. Peter Mooney followed with a single to left-center and Wingo loaded the bases after beating out a bunt. The score became even once Beary reached home off of Jackie Bradley Jr's RBI sacrifice fly to right field. Christian Walker broke a one-run lead for the Gamecocks by singling to right field, allowing Mooney to score.

South Carolina will go head-to-head with No. 1 Vanderbilt in a three-game series this upcoming weekend.

GT defeats UVA

While Virginia defeated Georgia Tech Friday and Saturday, the Yellow Jackets' 10-8 win Sunday afternoon broke the Cavaliers' 12-game winning streak. The loss caused Virginia to drop to No. 2 in the rankings.

Both teams' defenses struggled to remain composed in the contest. Virginia used five different pitchers and accumulated six walks in the game. Senior Cody Winiarski (4-2) started for the Cavaliers but was replaced after three innings. Winiarski gave up five earned runs, six hits and three walks. Georgia Tech starter, Buck Farmer, faired better by allowing four earned runs, 10 hits and a walk, but earned the victory by striking out eight in seven innings.

Top 25 Baseball

The Yellow Jackets scored in six of the first seven innings. The only time the Cavaliers were able to lessen the gap was in the top of the fourth when Keith Werman's RBI single platted David Coleman, making the score 4-3. Georgia put the game out of reach in the fifth thanks to a pair of RBIs from Kyle Wren and Jacob Esch, making it 8-4. Brandon Thomas topped off

Two students land White House internship

By Alyssa Creamer
Collegian Staff

Amid the over 750 political science majors at the University of Massachusetts, two UMass students have landed the highly distinguished White House internship, and are currently working in Washington, D.C. for this spring semester.

Laurie Roberts, a sophomore, who has been at UMass for three semesters before moving to D.C. for the internship, said she "jumped at the opportunity to be a White House intern," figuring the hands-on experience would be a productive step towards her career goal of working for the government after college. After receiving an email from the political science department, Roberts felt the internship was "a perfect fit" for her because of her experience volunteering for President Barack Obama's campaign, "Obama for America" in 2008. Roberts also caucused in the Maine Democratic Convention for a progressive candidate in 2010.

"This program has opened doors for me I never even knew existed," said Roberts in an email interview that had to be cleared by White House officials before it could be sent back to this reporter. "I'm learning so much about how the Executive Office of the President works, and how government moves through the various offices and elements within them."

Roberts feels that her internship is not only aiding in increasing her knowledge of how government functions, but also aligning her in a better position for future job prospects.

"I'm receiving a lot of guidance and mentorship from people in my office and department about steps to take after college and what fields I may be interested in entering when I begin applying for jobs," said Roberts.

"Everyone in this building is here for a reason, and everyone has a remarkable story about what they've done and how they ended up working for President Obama," continued Roberts. "It is an honor to serve the President in the company of these people, and to work in public service for a President I truly believe in."

For junior Benjamin Levine, the other UMass student interning at the White House, the program is "the best internship anyone can have." Levine has previously interned for Governor Deval Patrick. At UMass, Levine has been an active member of the Student Government Association, serving as a senator for three years, chairman of the Ways and Means Committee and Secretary of Finance. Levine's responses also had to be cleared by officials before they could be released to the Collegian.

"I vividly remember sitting in Professor Stifler's 'Economics and the Literary Imagination' course in Machmer Hall when I got an email on my Blackberry," said Levine. "I quickly scanned the sender and subject line which read 'WH Internship Program re: Congratulations…' As soon as I saw the word 'congratulations' I jumped out of my seat, ran out of the classroom and read the email. I have honestly never been more excited about anything in my life." After calling family members and taking about 15 minutes to let the reality soak in, Levine returned to class as it ended, apologized to Stifler and told him that he'd remember Stifler's lecture on "The White Tiger" forever.

"No matter what you are studying or plan to be, the White House can provide unique experiences … To be a White House intern is a privilege and an honor which alone is an opportunity of a lifetime," said Levine. "In terms of learning experiences, interns learn new things everyday about the government, the world, and themselves."

Using and Gaining Experiences – From UMass to the White House

Levine is interning in the office of National Economic Council Director Gene Sperling, while Roberts is interning for White House Operations, which means the two students have different daily tasks.

Levine said that his day nearly always begin with a routine check of his email to see if anything urgent needs to be completed. If nothing pressing is on the morning agenda, Levine eats a little breakfast and reads the White House news bulletin before diving into his work, which might include "helping schedule Sperling's meetings, assisting with memos for Sperling or conducting research on an array of economic issues."

"I would say that because UMass is so large, with no one there holding your hand through your four years, I have developed a truly unique sense of independence and work ethic," said Levine.

"The White House is a work environment that is fast paced. I believe that were it not for UMass' way of throwing their students into 'the real world' right out of high school, I would not be as mentally prepared for the work I do."

In regards Levine's academic experience, said that UMass' political science and economics departments are "some of the best in the country."

"The position papers I had to write for my political science class-

JQA break-in, man steals laptop

A dark-haired white man in a green Boston Celtics t-shirt and black jacket allegedly stole a laptop and iPod Touch after breaking into a dorm room in the John Quincy Adams (JQA) high rise in the Southwest Residential Area Monday, according to a University of Massachusetts Police Department crime alert. The theft occurred around 8:30 p.m.

According to JQA residents, the room's occupant left their door unlocked.

"You have to have respect [for] friends," Chris Watt, 19, a civil engineering major said. "I consider everyone here [in JQA] a friend. I feel bad [for the victim], I used to [leave the door unlocked] all the time. That's the risk you take. I will lock it every time now."

The crime alert mentioned other thefts that recently happened in Southwest where laptops were stolen. The crime alert said that the suspect in those thefts had a similar description. Police believe the suspect entered by following a resident in.

"I think people need to be aware and lock their doors because not doing so is naïve," said Alex Hall, 20, a psychology major. "I also feel that I am safe as long as I take proper precautions. There's not much we can do to stop it; we don't leave our doors open to our houses, so why do it in your dorm?"

UMPD posted a photo of the alleged suspect on their website and are looking for helpful information about the thefts. The crime alert ended with a reminder "that allowing non-residents into the building may put others at risk."

Spreading the joy: Facebook page recognizes Franklin employee

JAKE HACHEY/COLLEGIAN

Regina Rosado, an employee of the Franklin Dining Commons who's gained fame with the creation Facebook page, says that all she wants to do is make people smile.

By William Perkins
Collegian Staff

Putting smiles on people's faces can make a difference in their day.

That's what Regina Rosado, an employee of the Franklin Dining Commons at the University of Massachusetts, believes.

And that's what she tries to do – each night she works.

"Everyone I see, I just want to put a smile on their face – just make them happy," said Rosado. "It makes me feel good to see other people happy."

In Rosado's efforts to do that, she's developed a catchphrase that has become a fan favorite by students and has garnered a bit of attention recently: "Have a beautiful evening" – a statement that she recites each night she's cashiering at the facility. The phrase has become so popular by some, that it's spawned a Facebook fan page, which has garnered over 1,100 fans in just the two weeks since its creation.

Rosado – a 25-year-old who lives in Ware with her mother, stepfather, nephew and nieces – said she doesn't remember how exactly she came up with her noteworthy phrase, but noted that she says it because she wants all of the patrons of Franklin to have the best evening that they can.

"I actually don't know how I came up with it," she said. "I just want[ed] to wish everybody … a really good evening. And I was like, OK, beautiful is the best and I want them to have the best evening."

And she wants to make those she sees each night smile, too.

"I actually want to put a smile on someone's face," said Rosado, who's worked at Franklin for about three-and-a-half years. "And if I put a smile on at least one person's face, then it makes my whole night better."

Rosado, who's lived in Western Massachusetts for most of her life, said she could always remember being happy.

"I basically grew up as this happy girl – always happy," she said.

And even when times weren't always easy for Rosado – who said she was bullied during some of her school years – she maintained a smile on her face and managed to get through them.

"There was [a time] it was hard, but I just smiled it through," she said.

Rosado wants to help students who might have had a rough day or might be going through hardships to smile, too.

"If I can brighten up someone's night, then they're having a good night and that makes me feel good in the

Road trip begins for UM softball

By Stephen Hewitt
Collegian Staff

The Massachusetts softball team will look to continue its winning ways and go for its eighth-consecutive victory when it sets out on a four-game road trip beginning Wednesday afternoon against Boston College.

The Minutewomen (16-14, 7-3 Atlantic 10) have used the fuel of a recent home stretch, going 6-0 at the UMass Softball Complex, to improve into a tie for third place in the A-10 standings. If the recent success is any indication, the squad seems to be hitting its stride as it eyes postseason play in about a month.

Standing in the way of extending their season-high winning streak are the Eagles (10-22, 5-6 Atlantic Coast Conference) who come into Wednesday's game slumping, having lost seven out of their last 10, including falling victim to a three-game sweep to Maryland this past weekend.

Still, UMass coach Elaine Sortino, knowing well that the ACC is regarded as one of the strongest softball conferences in the country, isn't concerned with BC's record.

"Regardless of their record, the inter-regional rivalry between the two schools has been long standing for a long, long time," said Sortino. "I don't think either of us are having a great year offensively. We could be coming into the contest hitting .320 and they're hitting .202, and we come out of there with a one-run game. They play in a strong conference, and it's

Leticia Velasquez, co-founder of KIDS (Keep Infants with Down Syndrome) discusses her experience as the mother of a child with Down Syndrome. Tue. April 19, 2011, 5:00 p.m. Campus Center 101

DC employee praised

ROSADO from page 1

long-run, to know that I had some kind of influence on that," she said.

Rosado thinks she's accomplished that goal. She said that – even before the Facebook page dedicated to her was created – students would come up to her and tell her that she made their day better.

"That makes me feel good," Rosado said.

And, since the creation of the page, several current and former members of the UMass community have given her positive feedback – both online and in person. Comments on the page range from praises of Rosado's attitude to a suggestion that she should run for president.

Rosado said that she was both thrilled and surprised when she stumbled across the page.

"I'm actually excited," she said of the page. "I'm really grateful [that] the students made this page."

Rosado's co-workers are enthused about the page as well.

Marc Morrisette, the manager of the Franklin Dining Commons, said that most of his employee's have been supportive and praiseworthy of the page and Rosado.

"I think it's great that people enjoy her," Morisette said. "I think it's great that people like to hear from her."

Morrisette, who's been managing Franklin for about four years and hired Rosado, said Rosado was assigned to do cashiering about a year ago, due to her good people skills.

"She's really good at interacting with the customers," said Morrisette, who noted that Rosado is one of the best in her post. "I feel that I can utilize her skills the best there."

Additionally, several students have expressed their enthusiasm with the creation of the page, too.

"Regina's my favorite person at Franklin," Douglas Smith, one of the first people to become a fan of the Facebook page, wrote in an email to the Massachusetts Daily Collegian. "It amazes me how much effort she puts into just telling people to 'have a beautiful evening' and trying to make them smile.

"She really does make a lot of people happy, and I think she should be recognized for what she does," Smith added.

Rosado, however, said that she just wants to "spread the joy."

William Perkins can be reached at wperkins@student.umass.edu.

Blazing fresh trails

The snow has entirely melted on the hill, and rather than trekking on foot, many students are breaking out their bicycles to embrace the new warmer weather's breezes, including these two Baker bikers.

Levine, Roberts enjoy Capitol

INTERNS from page 1

es easily translated into position memos I have to write here at work," said Levine.

Levine also said that his delining college experience was being a member of the University's SGA.

"There is no way one can teach leadership – it can only be learned," said Levine. "My years, experiences and both professional and personal growth in the SGA are arguably the best education and preparation for my duties as a White House intern."

Roberts also feels as though both her character as well as her experience at UMass has prepared her for her role in D.C.

Roberts said a "typical day in White House Operations is very rare," and that her intern tasks differ almost daily.

"I don't often feel overwhelmed," said Roberts. Roberts said the White House Operations staff is "very helpful" in answering her questions and preparing her for assignments.

"However, the learning curve has been fairly steep, as Operations is a fast-moving office," said Roberts. "I wouldn't say I've ever been 'trained' so much as learned on the job – quickly."

"It's been up to me to observe my supervisors, take criticism and use logic to accomplish what I've been asked to do," continued Roberts.

"[At UMass] I learned how to get work done independently, which has served me well here" she said. "Writing three papers and studying for a final all in the same day has prepared me for juggling multiple assignments over the course of the internship, as well as staying on top of long-term projects."

Roberts also said her involvement in the Political Science Undergraduate Board, among other extra-curricular activities, helped her develop stronger leadership skills.

FAMILY, THE FUTURE AND THE AMERICAN DREAM

A future in politics is what Roberts foresees for herself, but presently, her only immediate plans are to graduate from UMass and move back to D.C. to find work for a progressive organization or a politician Roberts finds has agreeable viewpoints. And to most, those goals come as no surprise, given Roberts' fascination with politics began before she hit high school. She attributes much of her interest in politics to the importance her parents' have placed upon being informed citizens, and she also said her parents tend to agree with her political stances.

"My parents were as ecstatic as I was when I told them I'd been accepted into the program," said Roberts. "I was raised in a very liberal household that often participated in events and rallies for Democratic causes."

"I am very intrigued by the 'game' that is played in D.C.," she said. "Every word is chosen carefully and every initiative is carefully weighed against the possible negatives and how it will affect elections years away."

She added, "I have very strong beliefs and convictions, and I think politics is a great bastion through which to affect positive change that I believe in."

Levine's family members were also excited at Levine's selection.

"My entire family is thrilled," said Levine. "In their minds, not only did I make it to the White House; they made it to the White House."

Levine said that his grandfather, a survivor of the Holocaust, is particularly moved by his grandson's internship.

"My family believes that it is a true blessing for a man to come to the United States with no more family to speak of and see his grandson work in the White House," said Levine.

In terms of political views, Levine said his parents are "fiscal conservatives but not to the point where they would vote for someone who had social positions they disagreed with," and that he tends to agree on most political issues with them. Levine said there is no single factor that makes the White House internship so amazing.

"Working in the White House has been a dream of mine and for me to just be in the building is such a treat," said Levine. "Another great part of this internship is that there are great lectures by senior staff and brown bag lunches with NEC staffers. Getting to know these people beyond the press coverage has been a fantastic opportunity.

"I also have to say that my fellow NEC interns have made this experience what it is," continued Levine. "We have become so close over the past few months and working with such talented and interesting people makes the late nights in the office fun. Seeing the President walk by now and again is also a major perk!"

Levine, who found his spark of interest in politics from his Advanced Placement Government class, looks to stay close to politics in his future career and is looking to stay in D.C. to "either work on a campaign or for a member of Congress." He said he hopes to attend law school within the decade, and then lind work in the private sector as a consultant for multinational corporations, non-governmental organizations and other international bodies on issues such as trade and geopolitical strategy. Levine said his long-term goal is to end up back in the White House one day, and that his dream job would be to one day become White House Chief of Staff.

"I know that my experiences at the White House will help me accomplish these goals because working here has taught me the value of excellence, in every sense of the word," said Levine. "The White House has taught me to never settle or accept mediocrity. As corny as this sounds, the White House taught me to believe that anything is truly possible if I work hard for it because in all honesty, I never thought I would be here."

Alyssa Creamer can be reached acreamer@student.umass.edu.

"If we don't believe in free expression for people we despise, we don't believe in it at all." Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Keeping up with cable TV

Emily McGovern

Up until I was about 12 years old, I was jealous of everyone around me for having the one thing I lacked: cable television. I had a grand total of nine channels that had very few shows to interest a kid my age. I reeled through the numbers I will never forget: two, four, five, seven, 25, 38, 44, 56 and 68 over and over again, fully aware that Nickelodeon would never mysteriously appear on the screen. It wouldn't have been so bad, but I knew with absolute certainty that while I sat grimacing through episodes of "Pokémon" and "Jerry Springer" my peers were all enjoying the comedic genius of "SpongeBob Squarepants."

When my parents finally caved and got cable, I was overwhelmed with the endless TV-watching possibilities. The cartoons that I only got to watch on Saturdays were on every day of the week, there were plenty of movies to choose from and there were shows that I had only heard about, but had never seen.

I didn't think I would ever be bored again.

Apparently I wasn't the only one who felt this way; networks were spewing one spin-off after another, coming up with more unusual and ridiculous "reality" shows.

Of course, the novelty wore off, and I was left wondering why hundreds of channels didn't feel like much more than the original nine. I was restless once again, and was greedy for anything new; I just wanted something I hadn't seen before, in one way or another.

Apparently I wasn't the only one who felt this way; cable networks were spewing one spin-off after another, coming up with more unusual and ridiculous reality shows. It was difficult to turn down "16 and Pregnant," which followed teenage girls through their unplanned pregnancies, usually accompanied by an unqualified father and disgruntled parents. "Hoarders" seemed a bit unusual, but it also proved to be more popular than expected.

And, perhaps most troubling, there was "I'm Pregnant and a Hoarder." This was my breaking point. Why would anyone ever make this into a television show?

How could we possibly be captivated by something so absurd and specific?

Then I remembered: this is exactly what I had asked for.

It seems that the more that is available to us, the more we need to keep us entertained. The networks can try to keep up and cater to our never-ending needs for something new, but I don't see how this cycle could ever resolve itself. Eventually, everything that has the potential to be made into a TV show will be, and then what? How will they keep us interested once every story line, every type of character and every premise has been exhausted? From where I'm standing, it's starting to look like a race to the finish line.

The problem is that, as viewers, we can't will ourselves to be more easily entertained.

Anything less than the best we've ever seen will inevitably be disappointing. "The Office," for example, has been one of my favorite shows ever since it started seven seasons ago. I liked its uncomfortable humor and the absence of a laugh track, and that each character was bizarre in their own way. But once I knew how good a show could be, I lost interest in many others, finding them less captivating in comparison. I immediately dropped all the silly high school dramas I had previously been infatuated with. I had lost all patience with the less-than-sincere actors, overdramatic plot lines and cheesy scripts.

To make television even more accessible, Netflix has added hundreds of shows that can be ordered or played instantly online. It brings TV watching to a new level, and tempts viewers to simply click the "play next" button to see episode after episode without commercial interruption.

Netflix has explained their tactic for widespread viewing as such: "More recently, as streaming has become central to our business, we believe there may be an opportunity to change our focus from a household relationship to an individual relationship, since streaming is viewed on personal devices, such as phones, tablets and laptops, as well as on shared large screen televisions."

Apparently the increasing number of devices that allow for instant streaming has also had an impact on the way that we view television.

Now that we are in our current technological age, we are almost always in a position in which we can watch TV. With so many options, the quality of our programming should be going upward instead of downward.

Emily McGovern is a Collegian columnist. She can be reached at emcgover@student.umass.edu.

For better, for worse

Billy Rainsford

Monica Alcota should have the right to live with her spouse.

The 35-year-old Argentine woman first came to the United States on a tourist visa, according to CNN, allowing her to stay in the country for a short time before returning to South America. But true love got in the way. Alcota met and fell for an American, whom she then married and fully intended to live with. Not a problem, right? A foreigner marrying an American is usually granted permanent residence in the United States, as long as the marriage is legitimate. Even if the foreign spouse is an illegal immigrant, the marriage entitles the spouse to legal residency. Alcota overstayed her tourist visa while courting her love, but by marrying an American citizen, her undocumented status would be negated by a green card.

There's just one small catch.

Alcota is a lesbian, and her marriage was to 25-year-old Cristina Ojeda, another woman. Though Alcota and Ojeda were legally married in the state of Connecticut, the 1996 Defense of Marriage Act prevents recognition of the marriage by the federal government of the United States – the same federal government of the United States that issues green cards to married immigrants. Alcota was ineligible for legal residence because as far as the government was concerned, she was not legally married.

On the brink of deportation, Alcota was saved when President Barack Obama announced that the Justice Department would no longer defend DOMA in court, CNN reported. The constitutionality of the law is being challenged in court by several equal marriage rights groups, and while the fate of the law is decided, the judge presiding over Alcota's case decided to put it on hold.

On the brink of deportation, Alcota was saved when President Barack Obama announced that the Justice Department would no longer defend DOMA in court, CNN reported.

These legal troubles are typical of same-sex couples seeking immigration benefits, which is a troubling situation in a country that prides itself on its long, diverse history of immigration.

This hidden effect of DOMA robs the United States of positive contributors to the community and the economy, all on the basis of their sexual orientation. Ironically, Alcota had first come to the United States to seek a community more accepting of her orientation. She has lived in the US for over 10 years and had never attracted the attention of immigration officials until border patrol agents randomly stopped a bus she and Ojeda were riding from Buffalo to New York City.

Why deport someone so harmless?

A straight immigrant in Monica's situation certainly would not be shipped back to their former country. This shows the double-standard the federal government holds gays and lesbians to, a double-standard that can only be considered discriminatory as it robs people like Alcota of rights afforded straight immigrants.

The situation is compounded by Alcota's illegal status in the U.S. There are those who would argue a straight immigrant in Alcota's situation should not, in fact, be afforded legal residency, for no other reason than she is illegal. The term "illegal immigrant" has become a loaded one in American popular culture, bringing to mind stereotypical implications of border-hopping and job theft.

The legal issues surrounding immigrants like Alcota, however, are quite nuanced. An "illegal immigrant" like Alcota has not actually committed a crime by overstaying her visa; visa overstay is a civil offense, not a criminal one. Civil law is the same type of law that deals with traffic tickets, and you'd be hard pressed to find someone who would argue a person should be deported because they were caught speeding home to catch "Glee."

Even an immigrant who had committed a crime to get to America, though, deserves sympathy for wanting to stay and live with his or her love. Though the system is occasionally abused by so-called "green card marriages," where an illegal immigrant marries someone they do not care for just to get legal residency, it also provides an avenue for illegal immigrants to start families and become positive, stable contributors in the community.

Gay and lesbian illegal immigrants deserve that same chance – by achieving legal residency through their marriage, they too can contribute to the community they live in, which is a net benefit for the country the United States should be encouraging, not preventing.

Standing in the way of gay and lesbian immigrants' rights looms DOMA, an outdated law that continues to be defended by social conservatives in the Republican Party. After President Obama instructed Attorney General Eric Holder to stop defending DOMA in court, Republicans in the House of Representatives voted to have the House General Counsel do so instead.

In the meantime, Alcota and Ojeda are enjoying life together as a happily married couple in New York. They know, though, that they have the support of many who don't want such a loving couple torn apart by a cold, uncaring government.

Billy Rainsford is a Collegian columnist. He can be reached at wrainsfo@student.umass.edu.

Five Reasons Why:

There's no toilet paper in Herter

1) Environmentalism gone mad.

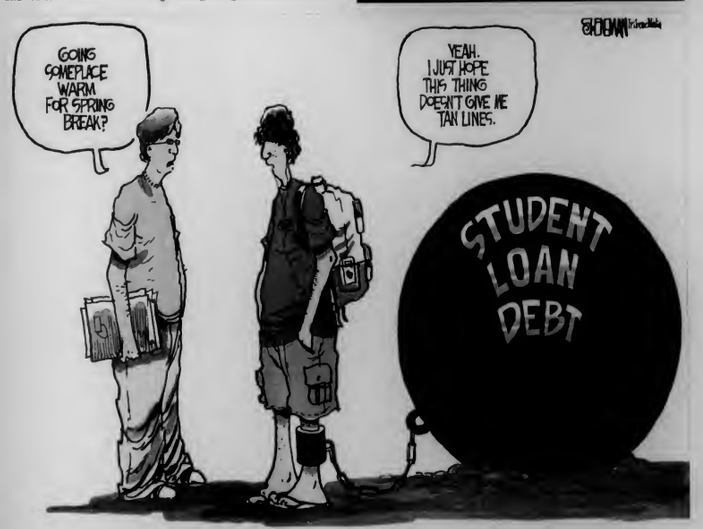
2) Professors want us to be like Erasmus and use live geese.

3) Some weird consequence of the smoking ban.

4) That guy who does the drawings in second floor men's room needed it for his art.

5) Cats plus laser pointers.

Ed/Op



On beyond Xanax

Victoria Knobloch

When I was 11, I couldn't sit still
Teachers complained so they gave me a pill
Toe tapping, hair twirling slowed to a still
But all those amphetamines can give quite a thrill

Adderall makes heart racing, blushing and giggles
Granted it eliminates any hint of the wiggles
Loss of appetite erases some of your jiggles
Increased intensity begins loud, angry quibbles

Physical violence is not good at all
So out from the RX comes Risperdal
Sure it's for psychotics, but it's the doctor's call
And she says in no time I'll behave like a doll

Back come those jiggles lost with the speed
And with it comes worries that begin to seed
And grow into a powerful, desperate need
For Valium in bulk like animal feed

Diazepam is its clinical name
I take it and become increasingly tame
And drowsy and silly; extreme laziness came
I always had to pee, which was a fun game

Lying around, unable to rise
Turns me into a person who just sits there and cries
In comes Welbutrin and with it the lies
That wellness will come to someone who tries

Life like a vegetable, no: at all a go-getter
Doctors confused why I'm not getting better
Medical testing makes me a drug vetter
Becoming best friends with the blood letter

Insurance bills come, and oh for Petc's sake
Pills make up most of my caloric intake
Uppers and downers, hard to stay awake
Weight of the world, about ready to break

Despite all the medicine making me tick
University says that I'm not really sick
Failing my classes but just need a kick
'Cause the real world ain't gonna buy my shtick

Orange bottles fill my recycling can
Can only wonder if there'd been a medicine ban
For a kid who just wanted to be Peter Pan
And suffered from a lack of attention span

Now I'm a junkie, though legal and clean
Add on top of it an addiction to caffeine
Get a crown for being prescription drug queen
I can't help but think what it all means

For a whole generation jacked up on dope
It's an answer for those who toe tap or mope
But in the end they have helped me cope
For better or worse, I'm not without hope

So through Celexa, Prozac, Paxil and Ritalin
Concerta, Cymbalta, Xanax and Klonopin,
Have helped and hurt through thick and thin
At the end of the day you just gotta grin

Because when things begin to go downhill
These medical cocktails give life some thrill
And I'll keep trying and hoping and praying that still
Maybe, someday, all my problems will be fixed via pill.

There once was a writer named Knobloch
Whose columns wouldn't stay under lock
So drop her a line, she'll like it fine,

ARTS@DAILYCOLLEGIAN.COM

Sisters strut their stuff for good cause

By Kate Evans
Collegian Staff

The downstairs area of the Campus Center was bursting with students dressed to the nines on Saturday, April 9, as the lobby outside the auditorium was filled with balloons, flowers, and raffle tables. While eager attendees bought tickets and waited for the doors to open at 6 p.m., students bid on gift packages and outfits to be worn by the models in the fashion show.

Sisters on the Runway (SotR), in its UMass incarnation, put on a fashion show of glamorous proportions to help raise awareness and money for victims of domestic violence. All the proceeds raised from the show were donated to Safe Passage, a shelter for domestic abuse victims in Northampton.

Upon entering the auditorium, a red carpet was laid out for photo shoots with the models and students involved. Photographers gathered around the carpet and in front of the runway, which ran from the main stage down the middle of the auditorium. About 10 rows of chairs were lined up facing the runway on either side and a roped-off section for event VIPs was directly in front of the runway.

A purple rubber SotR bracelet, Safe Passage awareness pamphlet and SotR informational flyer rested on each seat for audience members. A table of baked goods and water stood by the entrance of the auditorium and attracted much attention before the show.

Just after 6:30 p.m., Sae Bluff entertained the eager crowd with a hula-hoop performance. Bluff danced to several hip-hop songs by DJ Loo, as she hooped her way down the runway. The lights went out halfway through her dance and her hoop lit up with multi-colored hues, as Bluff performed for 15 minutes.

At 7 p.m., the co-ed dance team Dhadak Fusion took the stage, spicing things up by rocking shimmery orange tops. The dance show ran for 10 minutes.

With stragglers still filing into the auditorium, co-presidents Kaelyn Siversky and Alissar Taremi greeted the crowd at 7:45 p.m., as the two gracefully thanked supporters and all those involved in SotR.

Safe Passage representatives Kim and Dawn followed up Siversky and Taremi at the microphone. After thanking the audience for their support, Kim said a few words:

"Passions are great, and passions are horrific, and our very reason for being an organization is that horrific passion that turns into domestic violence," said Kim. She continued on to say, "Our job at Safe Passage is to empower anyone who has experienced domestic violence."

Dawn shared her personal experience with domestic violence, telling the crowd that she was in an abusive marriage for 10 years before escaping, and stated that she has been free of abuse for 12 years now.

Dawn concluded her speech by stating the shocking fact that, "one-in-four women is affected by domestic violence in every community."

As the lights dimmed and the music blared, the 17 SotR models strutted down the runway one by one. Each of the models looked beautiful with styled hair, perfect make-up and chic accessories. The fashions worn were from Ode, Monella, Zanna, Oonas, LEERA, Asos, Tommy Hilfiger, Lauren Engler, Clinton Stone, Urban Exchange, Ultra Gal, Wendy's Closet, The Hempest, The Mercantile and Liz Eddy.

The models wore mostly dresses and skirts paired with heels, but also rocked pants, shorts and even bikini tops.

Ode presented a variety of fashions, kicking off with a glamorous, sparkly dress and bejeweled heels. Other outfits from Ode included dark skinny jeans and a tan T-shirt paired with a white blazer, a belted romper and a flow-like grey tube-top dress.

The first outfit from Monella was a beautiful and daring bright orange tube wrap dress matched with orange jeweled earrings and gold heels, as Monella featured two other dresses in the show. Also featured by the clothing line were a cargo skinny pant, button-up shirt and green vest outfit.

Oonas kept things springy with floral, bright patterns. One model wore a black, red, green and orange flowered dress matched with a tan fedora and black heels. The hat was a nice touch, as many of the other clothing lines involved went without them.

Every piece donated from the student-run line, LEERA, was easily categorized as club wear. The dresses were mostly black, tight and short, paired with gold beaded necklaces or scarves. One of the models wore a cropped black jacket with big gold buttons that served as a nice cover-up.

Asos mixed things up with a variety of fashions, including navy blue velour cropped pants, ruffles and animal prints. A zebra print, silky halter dress stood out among Asos' other outfits with its unique length somewhere between the model's toes and knees.

Tommy Hilfiger donated many outfits to the show, ranging from dresses to pants suits and cotton tees. Most of the conservative fashions were plainer colors with collared necks.

Lauren Engler designed one of the hottest outfits of the show. The model wore a short sleeve black see-through top with a black sequin design on one side paired with skintight pale jeans. With a black bra underneath and heels, the scene easily resembled that of a high fashion show.

Ultra Gal clothing showcased a purple see through belly shirt with matching baggy purple pants, similar to that of a belly dancer's costume. The outfit was decked out with gold sequins and straps, officially one of the most daring pieces of the show.

From The Hempest were summery pieces, like a colorful and sparkly triangle bikini top matched with green cropped pants. The Mercantile followed suit with a somewhat risque outfit consisting of a purple bra, belly chain, flowy skirt and high heels.

The fashion show ended by 8:45 p.m., as all the models walked the runway one last time together. Taremi and Siversky followed, leading to a standing ovation from the crowd. With the size of the crowd and the satisfied cheers, Safe Passage was surely pleased with the outcome.

Kate Evans can be reached at kvevans@student.umass.edu.

Pictured above is a group of models who walked this past Saturday at the Sisters on the Runway (SotR) event. In its UMass incarnation, the proceedings from the event went to Safe Passage, a NoHo based organization created to support victims of domestic violence.

Models walked the runway in clothing from Ode, Monella, Zanna, Oonas, LEERA, Asos, Tommy Hilfiger, and others.

'Scarcity' a sweeping theatrical success

By Josh Steinberg
Collegian Staff

A compelling tale of a lower class family struggling to get their lives in order, "Scarcity" ropes the audience in from the moment it begins. The story revolves around the lives of the troubled Lawrence family.

Herb Lawrence, played by Wilson Zinnurov, fuels his day through vigorous consumption of alcohol. Throughout the entire play, Herb can be seen with a drink in his hand. Zinnurov hits the nail on the head with this role, making you appreciate his character from the moment he steps on the set. Despite his lack of motivation and seemingly deadbeat personality, you can tell he loves his family and works towards making them happy. His relationship with his wife, Martha, is rocky at first glance, but there is actually a deep love between them.

Erin Wholley brings a dazzling performance to the table with her role as Martha, a strong mother struggling to make ends meet for her family. Her dead-end, low-paying job is the family's primary source of income, putting immense pressure on her to constantly toil through stressful days of work in order to provide for her children. She works hard to keep both her children on the right track and out of trouble.

Rachel and Billy Lawrence are teenagers who have to deal with the burdens and abuse that ensues from growing up in the lower class. Rachel is an innocent 11-year-old girl who looks up to her 16-year-old brother, and wants to follow in his footsteps. She is constantly pestering her brother to introduce her to his teacher so she too can fulfill her potential. Actress Kate Henoch turns Rachel into a loveable character that puts a smile on your face simply through her presence.

Billy, played by Zachary Smith, is struggling to find a way out his current situation. He is a smart, 'straight A' student who has been dealt an unfortunate hand in life. Smith draws the audience to feel connected to his character to the point where you are itching to see him maximize his potential and succeed in life. While his mother points him in the right direction, he is lacking in support from his father, which hinders his success.

The troubled teen, in his frantic search for a way out, is taken under the wing of one of his teachers, brilliantly played by Robin McNamara. Ms. Ellen Roberts takes a particular liking to Billy, and seeing the potential his young mind holds, she decides to help him succeed. Her intentions are more than professional, as it is revealed she fancies Billy as more than just a student. Her interest in him increasingly becomes obvious, and Billy eventually succumbs in order to get the help he needs.

In another dark twist, Martha's cousin Louie is constantly hounding her in an attempt to win her affection. Andrew DiBartolomeo does an exceptional job at portraying his passionately persistent – yet hopelessly misdirected – character. His intentions are clear, as he blatantly neglects his wife Gloria, played by Kim Feener, in an attempt to sway Martha into his arms. Martha, being a respectable and loyal mother, is constantly fighting off the affection being thrown at her by her desperate cousin.

What makes this play so enjoyable is the way playwright Lucy Thurber sprinkled a touch of dark humor in every crevice of the show. It almost feels unnatural laughing at such a hapless situation, but just when you think the Lawrence family is going down in flames, the audience is shown the light at the end of the tunnel. Billy gets accepted into a prestigious private high school, Herb gets work and can finally provide for his family and Gloria finds the support and comfort her life has been lacking in the form of family. The combination of a talented cast and an uplifting, jocular story gave "Scarcity" an abundance of entertaining and uplifting moments.

'Your Highness' proves a dud for otherwise dank director

By Acacia DiCiaccio
Collegian Staff

"Highness" describes the state of mind one would need to be in to find this movie funny.

Fans of fantasy films or Natalie Portman filed in to see "Your Highness" upon its release this past weekend. What they may not have been aware of, however, is that this movie was created by director David Gordon Green ("Pineapple Express"), and takes on a similar mantra of brainless stoner film mannerisms without the funny weed jokes (or Seth Rogan).

The film follows two resentful brothers, Thadeous (Danny McBride) and Fabious (James Franco, both with leading roles in "Pineapple Express") who embark on a quest to save a damsel in distress. Thadeous is the fat, lazy younger brother of the heroic Fabious. Thadeous is unhappy with his less than valiant life, so in turn he gets high most of the time. Fabious' love, Belladonna (Zooey Deschanel, "500 Days of Summer") is stolen by the evil warlock Leezar (Justin Theroux), who must impregnate the virginal Belladonna at the time that the two moons meet so that she can birth a dragon. Confused? Seeing the movie will barely clear up this bizarre plot line. The film does not focus enough time on setting up rules and a history of this mythical world. They spend only about one minute on this, actually – by reading out of an animated book bordered with a pot leaf pattern that proves distracting to viewers during what should in fact be important background to the story.

One of the difficulties found in fantasy plots is that viewers need to somehow be acquainted with the rules of this new world. Unfortunately, the writers did not even seem to know what cultural norms existed in the world that they created. While the actors speak with British accents and elevated diction that mimics 19th century English, the dialogue oscillates between over-the-top speech and inappropriate and unexpected slang. Rather than attempting to write real jokes, it seems that the screenwriters thought it best to draw laughs from inconsistent profanities.

The title, "Your Highness" appears to be a play on words, suggesting that the movie belongs in the category of "Harold and Kumar…" and "Half Baked," and would be best for an audience in another state of mind. Perhaps one of the most memorable scenes of the movie is with the psychedelic puppet, the Great Wise Wizard, who grows his own herbs, and has a glittering brain; even this scene is ruined by a slew of distasteful references to molestation, however.

The film is surprisingly gory, and may be better marketed as a guy's movie, though the theatrical trailers did little to suggest this. The film utilizes the gross-out factor to get laughs, but more often than not, the audience is merely unsettled. The incongruity of the relationship between Thadeous and Fabious leaves the audience detached from the characters because their personalities are too complicated for this mindless movie. The protagonist is rather unlikeable throughout the entire movie, so it hard to care about him and though he goes through a serious of challenging quests, his character remains static. Fabious's heroic masculinity is contrasted with numerous sexual references towards men and these jokes become more confusing than humorous.

For moviegoers excited to see Natalie Portman on the silver screen once again, "Your Highness" is a disappointment. She is not introduced until halfway through the movie, and even then she disappears multiple times and plays little role in the movement of plot. It seems as though, just in case Deschanel's extensive cleavage was not enough, filmmakers added Portman's character for extra eye candy, as her thong bikini may be the most prominent part of the entire film.

The action in "Your Highness" is over-the-top in a "Princess Bride" sort of way, but much less endearing, because this is not 1987 (and there is no excuse for having people in poorly made Minotaur costumes, because CGI has been around for a while now). When CGI is used, (such as for the lasers that Leezar shoots from his hands, clearly a reference to Emperor Palpantine from "Star Wars"), it simply looks overdone; the audience is unsure if the movie is taking itself seriously. But that is the problem – it is unclear when the movie is being facetious or totally sincere.

"Your Highness" is not a complete waste of film. Some funny jokes are made. Some actors are attractive, and there is occasional partial nudity. If the movie had been advertised as a stoner flick rather than a comedy for anyone over 17, perhaps the viewers would go into the movie with different expectations.

Maybe if you are looking for something to do after Extravaganja this weekend, this movie is worth your time. Otherwise, "Your Highness" is one to skip.

UMass turns up heat as season progresses

By Scott Cournoyer
Collegian Staff

With a thick conference schedule ahead, the Massachusetts baseball team will look to keep its offensive streak alive as it prepares to take on Boston College on Wednesday.

The offense, despite getting off to a cold start, has turned up the thermostat, with UMass (9-14, 3-3 Atlantic 10) posting just shy of over six runs per contest scored in its last 11 games, scoring five runs or more in seven of those matchups.

Although the usual lineup has increased its performance statistically in the batter's box over the last dozen games, a couple of teammates in the top-half of the order have combined to take over the conference leader boards when it comes to hitter's stats.

Seniors Peter Copa and Matt Gedman have held down the responsibilities for getting on base and driving runners home for the Minutemen, combining for 39 RBIs between the two of them.

Gedman, who leads the conference in hitting with a .444 batting average, also ranks fourth in the country in the same statistic, as he is 10 points behind Tanner Waite of New Mexico State. The Framingham native also has blistered A-10 pitching with his .474 on-base percentage, good for fourth in the conference. When it comes to runners on base, Gedman has delivered a .500 average (22-for-44) and stands at 459 (17-for-37) with two outs.

Copa is currently batting .359 on the season, with a team-leading 19 walks. His .519 on-base percentage ranks best in the conference, which attributes to his plate discipline that he's shown over the past four years. This discipline was evident in the Minutemen's recent loss against Dayton.

"I was getting a lot breaking balls in the first couple of at-bats in the series, so I decided to lay off of them until I could get something different," said Copa. "In my third at-bat, I waited for a fastball and when I saw it, I decided to jump on it."

Copa's 692 slugging percentage puts him at the top of the team, as he has also helped drive in 22 RBIs.

Both Copa and Gedman will be called on for help on the offensive front against a defensive Eagles side that recently downed Bryant, 16-5, and defeated SIU-Edwardsville, 15-0 earlier this season.

At this point last April, the Massachusetts baseball team was sitting on four wins out of 21 games played, including a streak of nine-consecutive losses to start the season.

The Maroon and White posted some alarming statistics, including an average of 4.8 runs scored through those 21 games (with a handful of high-scoring but unusual situations that inflate that number).

Additionally, the Minutemen were held to one run or less in six of those opening contests, and four runs or less in 12 games. The pitching didn't keep the team in the ball game either, averaging over eight runs allowed in the same time frame, including double-digit affairs by the opposition on eight different occasions.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Matt Gedman swings at a pitch against Dayton. Along with the rest of the Minutemen offense, Gedman has been on a tear from the batter's box with a .452 batting average.

Sara Plourde, who has been strong for the Minutewomen, discusses the game situation with catcher Meghan Carta against St. Bonaventure.

Slap hit batter

MATTHEW from page 8

got here, it was tough for her with slapping and trying to learn the difference between a softer slap and harder slap and a bunt because the defense is so much better at this level and she has to be able to read what the defense is doing."

Since adopting her new approach, Matthew has studied and tried to replicate professional softball players. Perhaps the best player to emulate is Natasha Watley, a current member of the USA's Softball Women's National Team and a world-renowned slap hitter. Unsurprisingly, Watley is Matthew's favorite player.

"We have her look at Watley as much as she possibly can," Stefanoni said. "She's done her own research, she's Youtube'd videos."

Matthew's speed is what sets her apart from other players. In order to utilize that speed, however, she has to get on base. The Minutewomen would like to see her on base percentage increase, as it currently sits at .319. Even with her speed, Matthew will have to wait for the green light from UMass head coach Elaine Sortino.

"It's different from baseball [where] there's a bigger lead," said Sortino. "I do think that there are green light conditions that can result at the plate with a mishandle or a bobble that she knows [she can go]. A straight steal, though, I wouldn't be too happy because it's too easy to get doubled up."

Steve Levine can be reached at slevine@student.umass.edu.

Speer, Wilkins on UM radar

BOUTIN from page 8

age and a .410 on-base-percentage, including two home runs and 12 RBIs in all 30 of her starts.

"We've definitely turned a corner [offensively]," said Boutin. We're really getting there, we're really hitting the ball hard, we're swinging at good pitches [and] we look a lot more comfortable and stronger at the plate, so we're really coming around."

The UMass offense will try to continue to turn the corner and feast off of a BC pitching staff that yields an ERA of 4.47 this season. The likely starter will be Allison Gage, who holds a record of 4-9, a 3.97 ERA and has 48 strikeouts through 97 innings.

The Eagles could do most of their damage from the plate, as they have hit 38 round-trippers this season, which is over twice as many as the Minutewomen (17).

Leading the attack for BC are Tory Speer and Brittany Wilkins. The duo has produced 18 home runs and 53 RBIs combined and a .340 and .337 batting average, respectively, so far this season.

"They've always come after us," said Boutin. "I know going there, they're going to have the fans on their side, but we're going to be coming after them just as hard."

The first pitch is scheduled for 4 p.m. from Shea Softball Field in Chestnut Hill, Mass.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

SPORTS@DAILYCOLLEGIAN.COM

Minutewomen face ACC opponent

SOFTBALL from page 1

a good inter-regional rivalry ... always has been."

That inter-regional rivalry has been dominated by the Minutewomen, who hold a 44-4 all-time edge against the Eagles, and have won 13-straight matchups since 2004.

To continue its streak, the Maroon and White will once again look to pitcher Sara Plourde to provide impressive pitching from the circle. The junior has tossed three no-hitters in her last four starts. For the season, she boasts a record of 14-10, a 1.41 ERA and 282 strikeouts in 164.1 innings pitched.

"It's been a slow but steady comeback," said Sortino. "Every day we're getting a little bit better in terms of speed, and keeping it. I think that her ball movement and her spins are getting sharper ... and then the third piece which is really, really important is, [and] I think everyday she gets a little bit more consistent in terms of her pitch location."

Although Plourde seems to be back in form, it will be up to the offense to give her the run support she needs. Recently, that support has been there as the Minutewomen have outscored their opponents, 26-8, over their seven-game winning streak dating back to March 30.

Orchestrating the effort, quietly but methodically, has been senior Audrey Boutin. She won't dazzle with flashy home run numbers, but she does lead the team with a .311 batting aver-

JEFF BERNSTEIN/COLLEGIAN

Cyndil Matthew prepares to catch the ball in the Minutewomen victory over St. Bonaventure. Matthew has provided strength in her ability to slap hit, even though she bats ninth in the lineup.

Matthews impressing

By Steve Levine
Collegian Staff

Since becoming a starter this season for the Massachusetts softball team, sophomore outfielder Cyndil Matthew has done much to impress her teammates and coaches.

In addition to playing volleyball and basketball for Westfield High School in N.J., Matthew excelled mostly on the softball diamond, where she set records for highest batting average (.642), most doubles in a season (11), most career hits (130) and home runs in a season (20).

Matthew batted primarily right-handed in high school, which has changed ever since putting on an UMass uniform. Matthew now bats left-handed and is primarily a slap hitter, an approach meant to utilize her speed by putting the ball in play and pressuring the defense.

"When she got here we knew that we were going to need her speed," said UMass assistant coach Kristi Stefanoni. "She is fastest [down the line] from the left side so when she got here it was all slapping. As long as she runs like that, she'll be left-handed forever."

Typically, a speedy contact hitter would be placed in the leadoff spot of the lineup. Matthew, however, bats in the nine spot.

Matthew and leadoff hitter Kyllie Magill are responsible for 30 of UMass' 114 runs as well as 16-of-44 steals. Magill is 7-for-8 in stolen base attempts while Matthew is 9-for-9.

"She's like our second leadoff [hitter]," said Stefanoni. "She's someone we can depend on to get on base and use her speed and then have the heart of the order... [come up] to drive Cyndil in."

Much like the rest of the Minutewomen, Matthew struggled at the plate to start the season. However, Matthew has raised her average from .203 to .247 while scoring six runs and stealing three bases over UMass' last 10 games, in which the Minutewomen are 9-1 over that span. With continued starting experience, Stefanoni expects her development to continue.

"She has [developed] so much; she has become a triple threat," said Stefanoni. "When she first

Grand slam by Paolini gives Minutemen 3rd-straight loss

UMass	4
Siena	9

By Eric Mansfield
Collegian Staff

Heading into Tuesday's game, Siena's Dan Paolini needed one home run to become the Saints all-time leader in that category.

The Massachusetts baseball team probably wishes he would have picked a different time to make that record his own.

With the score all tied up in the sixth inning, the junior second basemen hit a grand slam to help put the Saints up, 8-4. Siena (11-21) would tack on one more run in the eighth, securing themselves a 9-4 victory over the Minutemen (9-15, 3-3 Atlantic 10), who have now lost four of their last five games.

After UMass came up empty after a leadoff walk in the top half of the first, Siena wasted no time at all, plating a run on a sacrifice fly by Larry Balkwill, giving them a 1-0 lead.

The second inning proved not much different, as UMass left two men on base and Siena plated two more runs, this time on a two-RBI single by Vincent Citro.

The third inning showcased a different game between the two squads. After Anthony Serino reached base for the second time in the game, Eric Fredette walked. Matt Gedman, who upon entering the game was leading the A-10 in batting average at .444, tripled to right field, bringing both Serino and Fredette home. Tom Conley then brought Gedman in on a sacrifice fly, tying the game up at three.

Siena came right back to take the lead in the third after Paolini scored on a two-out single to right field by Ken Kirshner. This knocked out UMass starting pitcher Aaron Plunkett, who was replaced by Ben Hart. Hart recorded the final out of the inning on the first batter he faced.

After a scoreless fourth, UMass answered with another run of its own in the fifth. Serino got things going once again on a single to right field, and moved over to second off of a sacrifice bunt from Fredette. Serino then advanced to third base on a passed ball.

After Gedman walked, Siena made a pitching change, pulling starter Jake Werdesheim for C.J. Sohl. Peter Copa then knocked Serino in with an RBI single to center field. Conley ended the threat, and the inning, after striking out swinging.

The score would remain tied after Siena and UMass didn't score in their next at-bats. The bottom of the sixth inning went in another direction, though: as Siena broke the game open on one swing of the bat.

After Andrew Sawyer led off with a walk, he was forced out at second base on a sacrifice bunt attempt by Tyler Bell. John Rooney then reached after being hit by a pitch. A single by Citro advanced both Rooney and Bell into scoring position. That's when Paolini came to the plate and hit a grand slam to left field to give the Saints an 8-4 advantage.

"Obviously it was the difference in the game. [We] had opportunities before that but didn't cash in," said Stone.

UMass didn't respond, going scoreless the next three innings.

Taking the loss for the Minutemen was Hart, who pitched four innings, giving up four runs on the same amount of hits while striking out and walking three. Getting the win for the Saints was Sohl, who went 2.2 innings, allowing no runs on three hits while striking out three and walking one.

Up next for the Minutemen is a home game against Boston College on Wednesday at 3 p.m.

Eric Mansfield can be reached at eamansfi@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Peter Copa catches a Dayton Flyer at the bag. Copa has been dynamite on the offensive front for the Minutemen, as he leads the team in home runs (7) and walks (19).

JEFF BERNSTEIN/COLLEGIAN

Right-handed pitcher Robert Machado throws a pitch against Dayton. Though Machado recieved the loss on April 10, it was Sorenson who came in to try and provide some relief.

RHP Sorenson adapting to UM after UVM cuts baseball team

By David Martin
Collegian Staff

When a baseball player enters a game, no matter how late in the season, he reflects both on how he thinks the game will go and how he feels the game should go, based on everything he knows about the teams, the field and the game itself.

Sometimes when it is least expected, life takes a shocking turn in a different direction, throwing a real-world curveball.

For junior right-hander Leif Sorenson of the Massachusetts baseball team, that real life moment came at the end of his first season of collegiate ball.

Sorenson's former school, Vermont, cut its baseball program after the 2009-10 academic year due to a lack of funding. As a result, some of the former players sought out other schools, as they looked to further their education while still keeping the opportunity open to pursue their futures in baseball.

Sorenson, in addition to senior second baseman Eric Fredette and junior right-hander Ben Hart, all chose UMass to be their next school.

In his first season with the Catamounts, Sorenson held a 0-4 record with a 6.15 earned run average in 21 appearances, one of which he started. In 26.1 innings pitched, he earned one save and 12 strikeouts, while relinquishing 31 hits, 18 earned runs and 18 walks, with opponents hitting .307 against him.

In his first full season with the Minutemen, Sorenson began to grow into his role, and he improved in almost every pitching category. In 19 appearances, Sorenson would garner a 2-1 record with five saves in 29.2 innings pitched. Though his hits rose to 34, his ERA shrank to a much more favorable 3.94, while his earned runs would fall to 13 with eight walks. In addition, his strikeouts would rise to 14, with opponents hitting for a considerably less .286 average.

Throughout the Minutemen's (9-15, 3-3 Atlantic 10) 2011 season, Sorenson has proved to be a key player in the bullpen, quietly assuming the team's closer position. In four of UMass' nine wins, Sorenson earned four saves (10 appearances) while holding opponents to a 0-3 record. He has walked four batters and given up eight earned runs, in addition to striking out an impressive 15 opponents.

Sorneson has also had statistical improvements when facing A-10 opponents this season. In games against A-10 teams, Sorenson has played 9.4 innings in which he gave up seven hits, no walks and struck out eight. Two of his four saves on the year came also came against A-10 opponents.

In losing one potential future with the closing of UVM's baseball program, Sorenson was put in an understandably tough situation. Though like his fellow teammates, Sorenson has made the move to another program and has begun to put out strong numbers this season.

David Martin can be reached at dmmartin@student.umass.edu.

BDIC hosts networking night

By Alyssa Creamer
Collegian Staff

For University of Massachusetts students developing their own concentrations in the Bachelor's Degree in Individual Concentration (BDIC) program, many find a number of benefits, including inspiration and solace, in meeting successful BDIC alums.

So this year, members of the BDIC student advisory board planned the program's first large and formal "BDIC Career Networking Night" – a night which brought together over 70 members of the program and featured drinks, dinner and speeches from BDIC alums about how developing their own college tracks led them to their careers.

Student advisory board member Tara Kelly emceed Tuesday evening's networking event, and said in her opening remarks that "looking out [into] a room filled with successful BDIC alumni only reinforces that our ability to create unique and individual majors pushes us to succeed even after graduation."

"A networking night seemed obvious," she said. "As BDIC students, we are naturally inclined to network. Unlike most students, we must advocate for ourselves and our majors and networking becomes our greatest resource."

The networking night prioritized inviting BDIC juniors and seniors. The night allowed time for students to socialize and eat amongst themselves. The students then heard from nine different alums of varying ages and careers speak on their experiences before the students moved into roundtable groups to further question their alum(s) of interest.

The featured alumni were Marc Berman, class of 1980 journalism alumnus; Annie Tiberio Cameron, class of 1973 environmental education alumnus; Emily French, class of 2009 holistic health and sustainability alumnus; Justin Gallant, class of 1993 entrepreneurial studies alumnus; Doug Levinson, class of 1985 molecular biology alumnus; Bruce Ledoux, class of 1991 international advertising alumnus; Cristina Sadler, class of 2008 marketing design and public relations for the green industry alumnus; Tom Sharpe, class of 1975 personnel management alumnus; and Bruce Warila, class of 1988 software design alumnus.

Nearly all of the alumni presenting that night spoke about concepts such as "making your own luck" and "keeping an open mind" that several of the BDIC students said resonated well with their personal beliefs.

Berman, an adjunct professor in the UMass journalism department, president of the WFCR Foundation and founder of the Scott J. Bacherman Fund, talked about how he was one degree of separation away from being a BDIC alum. He told his personal story about his cousin and his decision to pilot a radio station.

Cameron spoke about how her passions, such as teaching and photography, have dictated her career. She worked in education, and ultimately felt compelled to start her own photography business.

Ledoux, another alum whose career choices highlights how passion can catalyze life change, shared a moving story about his determination to raise money for children with illnesses and disabilities through founding Guardian Angel Motorsports, an organization that has raised over $160,000 for children's causes.

According to BDIC Director Daniel Gordon, also of the UMass history department, the night had a large turnout as BDIC contains nearly 230 students, many of whom are spending the semester studying abroad.

"BDIC students study abroad more often than any other major with the exception of languages, literatures and culture [studies]," said Gordon.

While the college has had several networking events throughout the year, usually inviting between 20-30 students, this event was by far held on a grander scale. It brought together more of the college's students, whose common desire to direct their own education makes it nearly impossible for all of them to interact in a classroom setting as other majors usually have the ability to do. The entirely student-catered night was held in the Marriott on the 11th floor of the University's Campus Center.

"I think it's awesome to have everyone from BDIC in one place and just to get to meet our own peers and see how incredible everyone is," said senior David McGavern, who is studying how to make computers more user-friendly and will be working at Apple on Mac development upon

Activist to give Palestinian talk

FILE PHOTO

Omar Barghouti will give a talk at UMass tomorrow at UMass which will discuss recent events in Gaza.

By Michelle Williams
Collegian Staff

Over the past week, the world saw a spike in attacks between Israeli forces and Hamas, resulting in many deaths and injuries.

The attacks were sparked by an antitank missile fired at an Israeli school bus on last Thursday, according to the New York Times, that critically wounded a 16-year-old boy. In response, Israel launched a series of aerial, artillery and tank fire throughout the Gaza Strip, attacks that resulted in the deaths of at least 18 Palestinian militants and civilians, according to the New York Times.

Days later, the New York Times reported that Hamas and Israeli leaders "signaled on Sunday that they were willing to restore calm after days of intense fighting," and a tense ceasefire remains in place.

Palestinian activist Omar Barghouti will speak tonight at the University of Massachusetts about these recent developments and more in an event titled, "The Global Struggle for Palestinian Rights."

Barghouti is a founding member of the Palestinian Civil Society Boycott, Divestment and Sanctions (BDS) campaign against Israel, a nonviolent movement initiated in 2005. The call to action on the BDS campaign website specifically calls for "ending its occupation and colonization of all Arab lands and dismantl[e] the

SGA senators talk tobacco-free ruling

By Sam Hayes
Collegian Staff

Recently elected Student Government Association President Yevin Roh vetoed last week's SGA Senate's motion to ask Chancellor Holub to delay approval of the Faculty Senate resolution which will ban tobacco from campus.

In a close 20-to-10 vote, the SGA failed to overturn the veto during Wednesday night's meeting.

Roh's main problem with the motion was that it insinuated that students did not participate in the process of creating the tobacco-free campus legislation.

"Students were involved at every step along the way," said the president, who helped write an earlier version of the tobacco-free bill as a freshman. Roh also said that, as a freshman senator, he warned the SGA that this rule was going to happen and they should not have been surprised when it did.

While being questioned by the senate about his veto, Roh said, "It is obvious that we do need a voice [in the tobacco resolution]... but we as students need to show we are the competent adults that we are [and rewrite the motion]."

Roh explained that he was not against the entire motion, but requested that the senate look at the problem and write a new motion with more specificity.

"We can write a better motion that has some deadlines and more factual information," said Roh.

He explained that he, along with speaker Modesto Montero, met with Vice Chancellor Jean Kim, who told the president and speaker that she would not approve the motion in its current form.

Montero clarified Roh's points.

"There was student input, but maybe there wasn't sufficient input," he said. "As a body [the SGA] was not involved."

Roh, Montero and the senators that spoke were all in favor of student input, and agreed that more could be involved with the faculty senate's tobacco-free campus resolution.

Andrew Prowten, former secretary of outreach and a student involved with the Faculty Senate, came before the senate to further explain the tobacco-free campus rule.

He said that some version of the rule has been being discussed for the past 20 years. Prowten's major addition to the rule was advocating against a $100 fine that was initially discussed.

When asked why the resolution covered all tobacco products, not just cigarettes or smoke, Prowten explained that the Faculty Senate specifically wanted to be a tobacco-free campus and did not want to set a vague precedent of being "smoke-free." In clarifying the law as tobacco-free, the Faculty Senate would not have to make changes should marijuana become legalized in the near future.

Additionally, student trustee Mike Fox was questioned on how he will vote for the fee increase and the potential flagship fee.

Although saying that he is "99 percent sure" that the Board of Trustees will get the majority needed to pass a student fee increase, Fox said he will take a "symbolic vote against the fee."

On the flagship fee, where his vote will most likely be more important, Fox said he is still researching and is unsure of his position.

After repeated questioning, Fox announced, "I am refusing to take any questions about how I am voting on [the flagship fee]."

Senator Zac Broughton brought up Fox's original campaign promise of not increasing fees. Fox called his promise "naïve."

"With no fees we would be looking at a drastically different university," said Fox. "Either more burdens fall on the students or there is a pull back on the service offered."

Nearly 100 students and SGA members will travel to the statehouse in Boston on April 20 to ask for increased funding for the faculty raises and the University as a whole on Lobby Day.

Any student interested in Lobby Day can visit SurveyMonkey on the UMass Lobby Day Facebook page.

The senate voted to give $2,000 to Alpha Phi Alpha Fraternity, Incorporated for seven members to pay for registration fees to attend a national conference.

The Northeast Area Government was given $4,000 to pay for t-shirts, food, beverages, police, EMT's and inflatables at this year's Quadfest. The event is traditionally paid for by the Commuter Area Government, but with their assets frozen, they could not fund the event.

Sam Hayes can be reached at sdhayes@student.umass.edu.

At last night's SGA meeting, President Yevin Roh vetoed a motion which would have asked the chancellor to delay approval of the Faculty Senate tobacco-free policy.

UM food science department unveils new research facility

By Brian Canova
Collegian Staff

The food science program at the University of Massachusetts recently unveiled a new state-of-the-art, 7,800 square foot research facility focused on discovering how nutritional value and accessibility to healthy foods can be improved in the supply of food at the national and international level.

The aim of the Fergus M. Clydesdale Center for Foods for Health and Wellness will be to learn and discover new components of healthy foods, according to Dr. Eric Decker, head of the UMass Food Science Department. Decker clarified that the food science department doesn't develop food products. Rather, it develops technologies to allow companies supply healthier foods.

"The pendulum is shifting towards making food healthier," he said. "Part of the challenge is that you still need to make it accessible because the major health problems in the U.S. are among families of low income."

Decker explained, that while the rise in popularity of organic food has been very successful, these foods are often unaffordable for lower income families. He said that the problem of "food deserts" in inner cities – where there may not be any grocery store for a family to shop at – severely limits access to fresh fruits and vegetables. This leads to a dependence on convenience stores and fast food restaurants as the primary food source, he said.

Decker also added that, on a per capita basis, food is cheaper than it was 100 years ago, with less than 10 percent of a household's income being spent to feed the family.

The new facility is located in the Chenoweth Laboratory and is named after Distinguished University Professor Fergus Clydesdale, retired food science researcher and Decker's predecessor as department chair.

The six labs in the $5.6 million facility are each named after science industry partners: Pepsico, Kraft and ConAgra, as well as alumni and major donors Charlie and Mickey Feldberg, Gil and Carol Leveille and Karakian "Cutty" Bedrosian.

The Food Science department raised $1.8 million over four years for the facility, which was then matched by the University for the second phase of the project. The University had previously spent $2 million in the project's early planning and development stages, which began in September 2008. Construction on the facility began in June 2010 and was completed this past January.

The new facility comes just in time. According to Decker, the food science program has tripled in size in the last five years.

There are two major reasons for its growth. The

Wall," "recognizing the fundamental rights of the Arab-Palestinian citizens of Israel to full equality," "and respecting, protecting and promoting the rights of Palestinian refugees to return to their homes and properties as stipulated in U.N. resolution 194."

"[BDS is] a global movement with a Palestinian leadership, and it focuses on the three basic Palestinian rights," said Barghouti in an interview on the "War and Peace Report," a program for Democracy Now.

"This is often forgotten, especially here in the United States. It's not just to end the occupation, because the 1967 occupation victimizes one-third, a mere one-third, of the Palestinian people," he said. "Two-thirds are either refugees in exile or Palestinian citizens of Israel."

Barghouti added, "To have a minimal kind of exercising of our right to self-determination, we would need to end the occupation of 1967, end Israel's system of racial discrimination ... so, have full equality in Israel for Jews, non-Jews and so on ... and the right of return for refugees in accordance with U.N. Resolution 194. Without that, Palestinians cannot exercise our right to self-determination, and we can never have a just peace."

The West Bank resident will also discuss his new book, "Boycott, Divestment, Sanctions: The Global Struggle for Palestinian Rights."

Though he lived in the United States for 11 years, while attending Columbia University and working in the country, Barghouti was denied a visa for several months to visit the United States and promote his book.

"I think I never had trouble until my book tour was announced. So I think it is connected to the book tour," said Barghouti on another appearance on the "War and Peace Report." "There was a clear attempt to cancel this book tour. I never had any security issue with the U.S., or anywhere else, actually. So there was absolutely no excuse. The visa was issued and then delayed. Some processes came up after it was supposedly approved."

The book is published by Haymarket Books, a non-profit, book distributor and publisher based in Chicago, Ill. In a statement on the publishing company's website, Haymarket Editor Anthony Arnove said he believed the visa was eventually granted as a result of an "international public campaign" that lobbied U.S. government officials, members of Congress and the State Department.

"It is proof that protest works and solidarity matters," said Arnove in a statement. "We are thrilled he is coming."

The event will be held tonight, April 14, in Thompson 102 at 6 p.m. The event is being sponsored by six Five College student groups, UMass' STPEC Department and the Western Mass. Coalition for Palestine.

Michelle Williams can be reached at mnwillia@student.umass.edu.

A truck drives down a road in the Gaza strip. Omar Barghouti will discuss recent developments in Palestine tonight in Thompson Hall.

Department admits class of 60

FOOD SCIENCE from page 1

first, he said, is "an increased awareness of foods and health, and the second is that food science has always had excellent job placement with average starting salaries of $50,000."

Sixty students have been admitted for next year's incoming freshmen class, the department's highest number to date, which has risen in each of the last three years, said the department chair.

"Traditionally when the economy is bad, interest in food science increases," said Decker. "It truly is a major where you can get a job right out of school."

Decker said that the industry also supports the department to train students to become future top notch scientists and future employees to their companies after graduating from the program.

The UMass Food Science Department was ranked number one in the country, according to a 2010 ranking by National Research Council, which is part of the National Academy of Sciences. Decker added that the department has boasted the top score on student satisfactory surveys administered at the end of a student's senior year for five out of the last six years.

The food science department at UMass has existed since 1918, and is the oldest in the country, according to UMass.edu. Decker explained that the program began because of a need to learn and teach how food could be better preserved.

Brian Canova can be reached at bcanova@student.umass.edu.

A new research facility has been installed in the Chenoweth Laboratory. The building hosts the UMass Food Science department.

Tickets available for 'UMassquerade' ball

Seniors, get ready to put on your dancing shoes – and masks.

The 2011 Commencement Ball, an annual event hosted by the University of Massachusetts Student Alumni Association (SAA) will take place on May 6 and will feature a "UMassquerade" theme. The theme was chosen by seniors in an online poll in January.

Tickets are $25 per person and have been available since April 6 online, but they can be purchased in person during the next few weeks. SAA members will be at Memorial Hall on Thursday, April 21 and Friday, April 22 to sell tickets. Seniors can also obtain tickets during Senior Fair on Tuesday, April 26 through Thursday, April 28 at Memorial Hall.

Because of high demand in previous years, SAA moved last year's Commencement Ball to the Mullins Center. The event will take place there again this year as the SAA hopes "UMassquerade" will draw a four-digit amount of students.

A DJ will be on hand to lead a dance party on the Mullins Center floor from 9 p.m. to 1 a.m. UMass Catering will provide hors d'oeuvres and desserts for the evening. Students over the age of 21 can purchase drinks at a cash bar.

In addition to the SAA, Mullins Center and UMass Catering, the Commencement Ball is supported by a variety of campus-related organizations, individuals and corporate sponsors. These include Auxiliary Services, Coca-Cola, the College of Humanities and Fine Arts, the College of Engineering, the College of Social and Behavioral Sciences, the Dean of Students, Housing and Residence Life, the Isenberg School of Management, the School of Education, the School of Nursing, Senior Campaign 2011, Student Affairs and Campus Life and the UMass Amherst Alumni Association.

More information about this year's Commencement Ball and other senior activities can be found at UMassAlumni.com/students/seniors.

Event allows BDIC students a chance to meet, network

BDIC from page 1

his graduation. "I love hearing about what makes people passionate."

After a live jazz-filled cocktail hour, Kelly and Gordon gave their introductions to the night. Gordon emphasized his hope that "BDIC would become a part of [the students'] sense of self," which several of the alumni guest speakers echoed during their stories.

"I think it's great to get alumni back so we can see what people who were in BDIC previously are doing now and how their concentrations played into their careers and life plans," said civic engagement and the politics of representation major and senior Nikki Tishler.

"It's also great to get BDIC students together," continued Tishler. "The nice thing about talking to BDIC students is that you'll have no clue what a person's concentration will be just meeting them, but you know your mind is going to be blown by it. No matter what they say, it's going to be amazing."

Even some of those students who may have been disheartened initially to discover some of the speakers were not working in fields directly related to their prospective work found value in the event.

"I figured I'd be able to talk to somebody who was close to my major," said Ben Silverman, a junior audio engineering and music production major. "But then I looked at the list of people and nobody seemed to be. Then, I coincidentally started talking to Marc Berman of journalism, and it turns out his son is a member of MGMT the band."

Silverman said his local band, Kids on a Hill, which is slated to play at the Spring Concert and was the recent winner of UPC's Battle of the Bands, used to play a cover of MGMT's song "Electric Feel."

"This is much more helpful than I ever thought it would be," said Silverman. "Talking to someone who knows exactly what it's like to be successful in the field I'm in is great."

Other than just meeting people in their fields, students also found the atmosphere of the event to be exceptional.

"The food has been amazing. The connections have been easy-to-make, and it's been very chill," said Rebekah Blair, a dance education and management fifth-year student, who aspires to open up a dance studio. "I don't know any other colleges in the country that offer a dance education concentration and business background, so as far as opening my own dance studio I need all those different skills."

The college plans to hold this event each year in the spring.

"We draw meaning from continuity in our lives," said Gordon. "And it is impressive that these alumni can tell stories that link their college stories to what they're doing now. I think that's an advantage of BDIC."

Alyssa Creamer can be reached at ascreamer@student.umass.edu.

BDIC students and alumni met one another at Tuesday's networking night. Unlike most majors, BDIC students do not often get an opportunity to interact with their fellow program colleagues.

Mayor Higgins set to leave NoHo early

On Sept. 9, Northampton Mayor Clare Higgins will leave office nearly three months early to become the new executive director of Community Action of the Franklin, Hampshire and North Quabbin Regions (Community Action), the Daily Hampshire Gazette reports.

Higgins has held the post since 1999 and was elected to six terms. She announced last month that she would not run for re-election, but at the time was not sure of her future.

Community Action "provides social and advocacy services to over 25,000 people each year in Franklin and Hampshire Counties and the North Quabbin region of Massachusetts," according to its website.

As executive director, Higgins will lead a staff of 350 and handle a $26 million budget, the Gazette said.

Last month, the Gazette interviewed Northampton residents who expressed mixed opinions on Higgins' impending departure.

"I think [her time in office] was just all right," said Bryan Lehr to the Gazette. "She did the best with what she had and was OK overall ... Change is always good, though."

Another resident, Diane Travis, said in a Gazette interview that Higgins' successor will have "big shoes to fill."

"I think she had a way of giving out information that was great, she'd have informational meetings at the schools, go into people's homes and just try to connect with people and let them know what's going on," said Travis.

According to the Northampton charter, David J. Narkewicz, the City Council president, will serve as acting mayor on Sept. 10, said the Gazette. Narkewicz, an at-large councilor, will then have to run against former City Council president Michael R. Bardsley in the Nov. 8 election if he wants to retain the post.

Bardsley served on the City Council for 16 years. He ran against Higgins in the 2009 mayoral election, but was defeated by 344 votes.

Amherst purchases new license plate reader

By Haleigh Finch
Collegian Correspondent

The town of Amherst will be using an $18,945 grant from the executive office of public safety and security to purchase a device to read license plates. The device will help police to identify unregistered vehicles and find drivers whose license plates are revoked for drunken driving and other offenses.

The device that the Amherst Police Department will be purchasing is an Automated License Plate Reader, a tool that will aid police in locating wanted cars and people.

This device can recognize 1,000 license plates per hour, according to a Daily Hampshire Gazette story about the grant. Advocacy for license plate readers has improved in the last 20 years and the price has dropped making them a more popular option, the Gazette story stated.

"Because of the way the device works, it could have been used to combat the rash of vehicle and house breakins last year," police captain Jennifer Gundersen told the Gazette. "This would include possibly identifying patterns among vehicles in the vicinity of the break-ins by creating a specialized database."

Ellen Santagati, a sophomore at UMass, is in favor of the license plate reader.

"I think it is a good idea. It will help make Amherst safer," she said. "There are many things we could do to make the community safer but this is just a small step. It shouldn't be a big deal if people don't have anything to hide from."

Another student, senior Jessica Arthur, disagreed.

"I think it's a form of profiling so it is not a good idea," said Arthur. "Identifying patterns among vehicles during certain instances would create biases in [which] the police choose to search first.

"The police do all they can to reduce crime and protect the people in Amherst, so I do not think there any many other avenues to pursue," she added. "Sometimes I think police may even be too harsh because they already have preconceived notions about college students."

The device will be purchased and installed in one police car by July, Gundersen told the Gazette.

Haleigh Finch can be reached at hffinch@student.umass.edu.

Beginning this summer, Amherst police will be able to read up to and recognize 1,000 license plates per hour with a new license plate reader.

"The best thing about the future is that it comes only one day at a time." - Abraham Lincoln

EDITORIAL@DAILYCOLLEGIAN.COM

Got shallow Pockets?

Chelsea Whitton

This column is painful for me to write. It contains truth in fact and in numbers that I have been reluctant to review. As graduation approaches, I'm trying to rid myself of my four-year demons, one of which has been money and spending.

On paper, my financial profile would look like this: Whitton, occupation: student graduating, major: journalism, student loans: a lot, current personal finances: grim. My student loans aren't astronomical, as I transferred to the University of Massachusetts from a private institution to get a budget-savvy education.

Here is the alarming bit: After some accounting on my part, I found that, if had saved every dollar I made during the duration of my four undergraduate years, I would have had enough money to cover exactly what my student loans amount to. I also might have some extra money for cushion when graduating.

But no, I am bare-boned in the financial department. I will share this – I have, until this Friday, 37 cents in my checking account. I pay for some rent, food and – despite what seems to be a financial burden – keep enough cash around that there must be a way to save.

I am someone who has been there and overdrafted on coffee, folk artist t-shirts and inexpensive beauty products. I am also someone who has chipped in thousands of dollars on my own education, won scholarships but still struggled to keep a positive savings balance and someone who in the last year has made a grand effort to reshape my financial future with my spending habits. This is why I'm qualified to tell you how to get your financial assets together.

My personal scenario tells me that not only did I not take responsibility of my spending habits early on; I'm also a reflection of our society.

I offer this piece of advice: Do not, under any circumstance, use a credit card during college. I didn't. Technically, there is a plastic piece of lies floating around somewhere in my parents' house with my name on it. However, I have never used it. I couldn't be any happier about this choice, because I hear from many of my peers that they are leaving college with not only valuable knowledge, but also anywhere from $2,500 to upwards of $7,000 in credit card debt. This is insanity.

This is a preventable and easy step to take. Don't spend money that's not yours. It's simple. It's like that "Saturday Night Live" skit from a few years back with Steve Martin. "Don't buy stuff you can't afford," says Amy Poehler. "If you don't have any money you should not buy anything. Hmm sounds interesting," to which Steve Martin replies, "Sounds confusing!" This is the best piece of advice you could take.

Next: take control of the money that is yours. It's simple – save your money. Let's say that, during my four-year academic experience, including summers, I had saved a reasonable $15 a week for a separate account than my regular savings. After eight academic semesters, I would have had roughly $2,700. Man, do I wish I had that kind of money sitting around; with interest, it would be even more.

Another step to take towards financial freedom and success is realizing you are the only person responsible for your spending – don't make excuses. You might be reading and thinking either that I grew up an indulgent materialistic and spoiled. I grew up wearing Salvation Army dresses and was dragged on camping trips, not expensive hotels – but was still extremely blessed. They gave me freedom throughout high school and college to make spending decisions on my own, and trusted me because of the practical foundations they taught me. Unfortunately I couldn't be trusted up until this year.

We don't talk about finances and spending enough while at college. We have unrealistic meal plans fees, housing costs and lifestyles. We pay fees for things that we will never use while attending UMass. We pay $8 for a drink uptown but are unwilling to give to charity or those who need it or to put in our savings, I'm not exempt from this.

Though the numbers I report may not sound outstanding to anyone or this advice as unheard of, I urge you to look over your personal finances, and make some changes if need be in order to ensure stability upon graduation.

My personal scenario tells me that not only did I not take responsibility of my spending habits early on; but I'm also a reflection of our society. I believe the media has failed to articulate to its youngest consumers (college students) that, amidst the three-year economic crisis, and the coverage on it, we as consumers are not told to save our money. In fact we were told, even by the President, to spend, spend and spend.

We heard things like, "Hey, young prospective buyers with jobs just as shaky as the rest of us, houses are cheap, go buy one. You need things – go support the economy and buy them." And so we did. We bought and bought more stuff and, in turn, the job recovery process was slow.

The simple fact is, I've made a lot of money as a college student, but I've made a lot of poor decisions that I wish I could take back. Hopefully, you take your financial future wisely and catch those dollars before its too late.

THIS WEEK'S FEATURED HAIKU:

WIND CREAKS TALL YOUNG TREES
AS I STAND STILL IN QUESTION
IN AWE OF ANSWERS

- KANE MEADOWS
WIND TAMER/POET

An airing of grievances

Nick O'Malley

I hate everything.

Well, most things. A lot of things.

Regardless, there's less than a month until I graduate, and there remains a colossal pile of glaring issues at the University of Massachusetts, and for that matter, the world.

Seeing as how there's a limited amount of time left, it's only logical to attempt to address all of these problems at once. It's prudent to try and solve all of the world's problems it in one column, so it's convenient to remember how all these problems got solved.

You know, for the children.

UMass football: Please go to the Football Bowl Subdivision. I'm tired of fake Division 1 football. Yeah, I said it. You all know that's what it is. I'm the only one admitting it here. Let's get this over with and move up.

Lockout of the 2011-12 NFL season: I understand, I really do. I understand that the money the players and retirees get from the owners may not be fair and that you've spent your entire lives preparing for this small window to make large amounts of money for your entire life while risking brain damage. Still, I don't care. You're millionaires. Play football. I don't care.

(Potential) Lockout of the 2011-12 NBA season: Oh, come on.

President Barack Obama: Yeah, you're kind of a wuss. Why'd you wait until you lost the House until you grew a pair?

Republicans: Please don't let Donald Trump or some other crazy win the primary. Actually, what am I saying? Don't let some crazy win the primary.

PVTA: I fully appreciate your service and understand why you are late. It's when you're early and leave me in the dust that our relationship begins to become strained. Don't do this to us PVTA.

SGA: It's understandable. You guys have an enormous amount of funding and a legitimate amount of influence. However, there's an enormous difference between how serious people inside and outside of the SGA perceive it to be. That's all. Just letting you know.

Autoplay on online videos: If I wanted to watch your video, I would. You know what videos I don't want to watch. The stupid ads halfway down the page that starts at max volume so it has you scrambling all over the page to ty and find it and shut it off. The Gawker blogs are definitely guilty of this. Speaking of which…

The Gawker blogs: Change your layout back. It looks stupid. It's not like the changes that happened on Facebook. Speaking of which…

It's prudent to try and solve all of the world's problems It in one column, so it's convenient to remember how all these problems got solved. You know, for the children.

Facebook: You're really just going to take everyone's personal information ever, aren't you? Yeah, everyone's going to get to see my stupid pictures from spring break in Miami. Speaking of which…

Miami: If I get skin cancer, I'm blaming you. That burn on my leg was the worst thing that happened to me since I was sure I'd signed up for housing junior year and SPIRE told me I didn't. Speaking of which…

SPIRE: I pressed that button. I should've lived in Wheeler junior year. But, no, I'm going to be mature about this.

You smell like butts.

Taylor Swift: Your slow, inevitable dominion over the American people will be complete in only a short amount of time. You start with country music, but soon your quirky acting appearances will translate to film. Please give the world more time before you take your place atop your throne of colorful notes to boys you have a crush on.

Obama conspiracy theories: Stop it. It's called Google. That's where his birth certificate is.

Google: Watch out for Taylor Swift.

Glee: You've had two episodes in two months. You're either the best worst show ever or the worst best show ever. Make up your mind.

The economy: Yeah, the big one. For some reason, there's only two schools of thought on this one: "the corporations and Wall Street are evil and greedy" and "Obama and the government are evil and greedy." I'm going to go with "a lot of people are financially self-motivated and willing to screw over people." Let's try screwing over less people.

Wings: Sometimes you screw me out of my money. One time, we ordered a Concorde for six people. We had three or four wings a piece. That's $42 dollars and don't think you earned it.

Auxiliary Services: Why do you get to drive everywhere? I once saw you take a right turn on the crosswalk near Bezanson, heading towards the building. The driver was looking at me, wondering why the hell I was in his way.

Library elevators: You're mocking me aren't you? You lazy, lazy bastards.

UMass and Town of Amherst Parking Services: Why do you refuse to teach me your ninja ways? No one sees you, yet you cause suffering amongst the masses. Your powers are truly ancient and legendary.

People that park at the steps outside the campus center: You suck. I don't care. There's a sign saying "no vehicles past this point." I don't want to hear you complain about your ticket. Suck it up. Park at Worcester.

My fridge: You need more pizza. Also beer.

The 2011 Boston Red Sox: There is something definitely wrong with you. I went to the game Tuesday night. Speaking of which…

My exam Tuesday night: I'm sorry. I was busy. I'll take the make-up. It's not like it'll affect my GPA.

Ah, crap.

My GPA: Uh oh. Hi Dad. I'm doing fine in classes this semester, why do you ask?

Students should fume over tobacco ban

Nathan Lamb

Herter 227 lecture hall was filled to the breaking point with occupants, as one student after another voiced their staunch opposition to the "Tobacco-Free UMass Amherst" policy.

Regardless, the Faculty Senate has proven yet again its blatant disregard for the will of the student body, endorsing the policy with a vote of 14-to-7. Not one single student, smoker or non-smoker, spoke in favor of the policy.

Generally, the University of Massachusetts is good at making it at least seem like the opinion of the students is taken into consideration, but in this instance, the students were flat-out ignored.

The policy, being painted as a "smoke-free" policy, is testament of its intrinsically shady nature. The policy does not aim to simply reduce second hand smoke for non-smokers. Rather, it is an ultimatum handed down by the faculty telling students what legal products or substances they can or cannot use during their stay at UMass. The policy bans all tobacco products and even one non-tobacco product aimed at helping people quit smoking, electronic cigarettes. Among the most egregious aspects of the policy are bans on smokeless tobacco and smoking in one's own personal vehicle while on campus.

One of the main arguments made by the faculty in support of the policy is the failed enforcement of the state law, which requires people to stand at least 20 feet away from buildings when smoking. It is strange how UMass has failed to adequately enforced this law. Could it be because cigarette butt receptacles are literally placed next to the doors of buildings on campus? Maybe they should try out the revolutionary idea of moving these receptacles to 20 feet away.

Has there been an effort to encourage students to smoke away from buildings? No. Maybe they should provide designated smoking areas in high-traffic areas on campus, much like the gazebos at Hampshire College, for smoking with protection from the weather. Rather than making any attempt whatsoever to curb the problem of smoking in front of buildings, it seems to authority the 20 feet law is unenforceable. After claiming this existing law unenforceable, the supporters within Faculty Senate went on to explain how the new bans would also be essentially unenforceable.

Reducing second-hand smoke is an understandable goal for UMass, especially in front of buildings. However, university and faculty supporters of the tobacco-free policy have yet to explain why smoking in personal vehicles, smokeless tobacco and electronic cigarettes have found their way into this policy.

The only reasonable explanation for these provisions is that the University is attempting to regulate the personal and moral decisions of students regardless of whether or not non-tobacco users are being affected. These substances and products are legal for all adults to purchase and use. The university and faculty have no right to regulate the moral and health related decisions of adults when those decisions are legal in the limits of the law. We cannot allow the University to set the precedent that regulating and systematically removing the personal freedoms of students is acceptable policy.

According to the Board of Trustees Statement on University Governance document, "Students will have primary responsibility for services and activities which are designed primarily to serve students or those which are financed primarily by students, managing student political affairs and organizational matters, and setting standards for student behavior, conduct, and discipline."

The tobacco ban is undoubtedly a policy concerning the behavior, conduct and discipline of students, but was the Student Government Association consulted? No. Was the Graduate Student Senate consulted? No. Was there a referendum question on the spring election ballots to gauge student support for the "Tobacco-Free UMass Amherst" policy? No. Students were inarguably ignored throughout the entire process of drafting and passing this policy because they know students would absolutely detest the over-reaching, freedom-encroaching and overbroad nature of this policy.

This policy has given rise to many important questions. Why has the health council chosen to address tobacco use before attempting to address the much more severe health concerns on campus like drunk driving? Who are the faculty and the University to tell students what legal products or substances they can or cannot put in their own bodies while hiding behind the façade of reducing second-hand smoke? And, after admitting the impossibility of enforcing the tobacco ban, why wait until 2013 to implement it?

The answer to the last question is obvious enough. It is clear that the school knows the students oppose such an encroachment on their personal freedoms. By waiting until 2013, the UMass conceals the caustic nature of this issue from the public eye for two years, by which time half of the opposition will graduate and begin their post-collegiate lives.

The most reprehensible aspect of this policy, however, is how it is being misrepresented by its supporters as a smoking ban, rather than the egregious and intrusive ultimatum on morality, health and personal freedoms of students that it truly is.

Do not let the University win by subverting our opposition and silencing our voice. It is imperative that you write about it, organize protests and voice your displeasure. Voice your discontentment, not only with the policy itself, but for being disrespected and ignored by the university and faculty in the process through which this policy was created.

Nathan Lamb is a Senator for Student Government Association and Secretary of the UMass Republican Club.

Time to end American empire

Harrison Searles

As debate over domestic policy in the United States focuses on austerity and reducing the federal deficit, there have been two 1,000-pound gorillas in the room.

One of which is so-called mandatory entitlement spending and the unsustainable commitment that the federal government has given to it. The second is the sacred cow that defense spending on a global empire that actually manages to diminish American security with its unnecessary series of globe-trotting military adventures over the past decades.

While the former has at least been acknowledged and addressed by Rep. Paul Ryan's recent and politically gutsy budget, spending on an at-best obsolete empire that stretches from South Korea to Germany is allowed to continue demanding and getting whatever it wants. It is time that the federal government come to terms with those unsustainable burdens that it has in foreign nations and replace them with a foreign policy that puts America first.

However, it must be warned that to think that ending the keystone role that the U.S. military plays in the structure of the world would simply be a matter of graciously leaving stage right as other nations peacefully decide to fill the role would be excessively naïve. Over the past decades – and especially since the end of the Cold War – too many nations have counted on Uncle Sam to provide at least an implicit threat of intervention. Whether it is the North Atlantic Treaty Organization or the United Nations, it is expected that the U.S. military will always be the leading force when it comes to military affairs.

This can be seen in not only the recent outcry for American intervention in Libya, but also the equally as loud, if not even more thunderous, calls for the military of the U.S. to enter Darfur in order to stop the atrocities there and in previous humanitarian missions in the former Yugoslavia. To end empire means to also end all military adventures for even the most humanitarian of ends.

The electorate must face the fact that there will be consequences of the U.S. relinquishing its role as global superpower and that this will mean that innocents across the world will die while we look on.

Of course, the formation of international security which would result from a draw-back of American involvement around the world – is difficult to foresee. Surely it is true that nations like France played a leading role in the actions in Libya so do-gooders can place their hope that they would act as the international keepers of the peace.

However, it is very doubtful that those very same nations, having a fraction of the military strength of the U.S., would be able to have the same capability to single-handedly give legitimacy to military adventures or to intimidate nations into accepting certain positions.

Furthermore, the presence of the U.S. in many regions only serves as a force that prevents events from reaching an indigenous equilibrium.

The fact is that, after the Gulf War and the fall of the Union of Soviet Socialist Republics, there has not been a nation that can actually hold a candle to the American military in a conventional war and now the only efficient tactic against it is a protracted guerrilla struggle. While this may seem to be self-evidently obvious, it is necessary to hearken back to the expectations of the Gulf War when decision-makers both within the executive branch and military were actually worried about the amount of casualties the Iraqi army could inflict. In many ways, the one-sided battles in the deserts of Kuwait have set a paradigm that we have all become too accustomed to: the thought that any military confrontation with the West is a one-way road to military disaster.

Whether another nation acting in place of the U.S. could also maintain that standard ought to be considered an open question if the U.S. were to pull-back its military might.

Nevertheless, despite reasons for short-term pessimism regarding the results of the end of the Pax Americana, there are plenty of reasons to be optimistic about the course of events in the long-run. For one thing, the greatest threat to American interests and security today is its own actions and those of its allies.

Creating an enemy out of the peoples of an entire region, as American policy in the near East has been doing over the past decades whether by giving unconditional support to Israel, or occupying an entire country after invading under pretenses now understood to be false will only make the U.S. less safe in the long run. Weapons and war cannot convince the peoples of the Middle East that the U.S. is a country that they should have peace with and once their grievances are actually considered, they are actually more reasonable than not.

Furthermore, the presence of the U.S. in many regions only serves as a force that prevents events from reaching an indigenous equilibrium. Whether it be American support for otherwise unpopular regimes or otherwise, often American interference in the affairs of a region serve to prevent an outcome that is fully compatible with all regional factors and this only makes the problem worse. All of these considerations are thoughts that help to offset the darker short-term picture of an end to the American hegemony over much of the world and show that its end may actually make the world a better place.

Without the consequences of blow back from military adventures gone wrong, the U.S. would paradoxically enough be made safer by a reduction of its self-inflicted military responsibilities across the globe. Furthermore, the money saved by such measures would help the federal government pay for the rash promises it made to its citizens over the last decades. Nevertheless, there is a stark contradiction between the desire to roll-back the post-World War II American empire and a desire to use the military as a tool to chase dreams of world peace in far-away regions engulfed in war and disaster. Once a single military adventure is allowed, a rule is set that it is a legitimate role for the U.S. military to undertake such missions, and the question then becomes what adventures are permissible.

The only means of ending the American empire is to simply accept Washington's advice that the best foreign policy is to simply pursue good will and trade with all, but alliances with none. If this is not accepted, then empire is the only logical conclusion.

Harrison Searles is a Collegian columnist. He can be reached at hsearles@student.umass.edu.

Kids on a Hill to bring the funk on Sunday

By Dan Gigliotti
Collegian Staff

A mess of wires lays strewn across the basement floor of Ben Silverman's Amherst home. A power surge connects the wires to a slew of musical instruments and equipment, including two guitars, a bass, keyboards, two microphones and a few amplifiers.

The room is no larger than a single dorm, but the nine present members of Kids on a Hill manage to find enough space to maneuver their instruments comfortably and begin their weekly practice.

Much like their early accommodations in a University of Massachusetts dorm room, where they began practicing, the bandmates are used to playing in tight quarters.

Still, in their two years of performing since, the hodgepodge group did not expect to receive the type of fandom that led to becoming the opening act at Spring Concert this coming Sunday.

In a lot of ways, their accommodations have made them tighter as a group and closer as individuals. Though they weren't strangers when they began playing in 2009, Kids on a Hill's assembly was merely incidental.

"It was interesting because we came together very organically and randomly," said singer Nora Murphy. "We didn't ever sit down and decide to be a band. We played this one show and then another show came up and we were like, 'Oh! Let's play that one again.'"

In early April 2009, drummer Nick Pope was slated to perform with his band at a Patriot's Day celebration at Orchard Hill until his cohorts cancelled. Pope scrambled for other musicians to fill the void with about one week to go before the show date.

Pope elicited the help of guitarist/drummer Ben Silverman, bassist Craig Holland and guitarist Ben Falkoff to fill the slot, who were already performing together as a trio.

The offer was extended to saxophonists Alec Huston and Greg Blair and singers Chris Kazarian, Nora Murphy and Madeleine Maggio, which began a fateful four-day stretch.

Most of the students resided on the same floor of Van Meter as part of a Residential Academic Program that grouped students in the performing and visual arts majors together.

Four days before its scheduled performance on The Hill, Orchard Hill, the group huddled into Silverman's single dorm room and began practicing for their impromptu gig.

They practiced countless hours until they had learned eight new songs, playing them in a set that opened the President's Day celebration show on The Hill on April 20, 2009.

A warm reception on The Hill coined the band's name and spurred them to continue playing for fun.

"[We] kind of just started because we really enjoyed playing together, no matter what. We liked jamming and, out of jamming, we got a couple songs together," said Silverman.

Aside from squeezing into dorm rooms, hallways and common rooms, the band drew crowds to their practices on the basketball court outside of Van Meter which, as Falkoff recalls, was not always welcomed, yet well-received.

"There was this one night when Orchard Hill was putting on [a party in the Orchard Hill Bowl] and we ended up playing the basketball court that night … At the end of the night, one of the maintenance guys, somebody who was in charge of the power, walked out and said, 'You know, it's midnight. You've got to put a stop to this. It's late. But, frankly, I think there's a lot more people here than there is at the Bowl,'" said Falkoff.

Kids on a Hill's sound is characterized by its upbeat harmonies and synchronized instrumentals. With the energy of an evangelist, Kazarian creates the driving force behind microphone while Murphy and Maggio mostly complement him in the background.

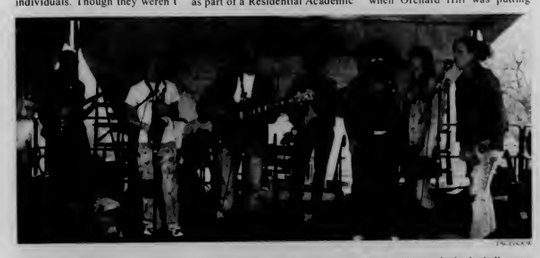
Pope craftily steadies the group on the drums, while Silverman and Falkoff trade licks wielding their electric guitars. Huston and Blair, who played saxophone together at Newton High School, have adapted a deftness of harmonizing the horns.

The newest member of the group, Christian Tremblay, has a not-so-ecclesiastical approach to the organs, while Holland provides the essential bass licks that qualify the type of jazz-and-funk infused tunes the band is accustomed to playing.

"The music that we play we're playing a solo and then we're jamming – but it never goes really far," Holland said. "We jam and then it stops and that only happens when we have a long show and we can actually do that. Usually, our arrangements are very tight and very much worked-out."

The fledgling group began predominantly playing cover songs. Out of the 10 people in the group, each had their own musical preferences, but they could all agree on one motif they enjoyed playing the best.

"I wouldn't say [we have the same] taste in music because we like all different kinds of music and different backgrounds, but we all love funk," said Maggio.



Kids on a Hill have gained considerable popularity ever since they started practicing in the basketball courts between Van Meter and Orchard Hill, where they have also played shows.

Kids on a Hill's most recently recruited member is an organ player, who adds a unique sound to the group's already electrifying funk sound.

In addition to covers of Jimi Hendrix, The Band and Jeff Buckley, they tackled funk classics from Sly and the Family Stone, Parliament Funkadelic and, most notably, Stevie Wonder.

The group recently played at the Jazz Showcase on the UMass campus, which was themed after Stevie Wonder, where they played "I Wish," "Sir Duke" and "Master Blaster," getting help from newly acquired freshman keyboardist Tremblay.

As of late, the group has included original music into their ensemble which, as Murphy said, has been an interesting and inspiring process.

"Now, we've been focusing a lot on originals and it's been such a great experience, getting to hear everybody's different artistic takes and how the band can really elaborate on songs that people write by themselves on acoustic guitar," said Murphy.

"Bring it to the band, flush it out, it's all instrumentation. Watching the songs transform and hearing people adding their ideas, it's really cool."

During the winter hiatus from UMass' scheduled classes, Kids on a Hill met in Maggio's hometown of Great Barrington and collaborated on an extended play album.

They cleared out a room in Maggio's parents' home and set up a makeshift recording studio, where they taped four songs in four days over Silverman's laptop.

The EP features original songs written by four members of the band. "Start it Upright" (lyrics written by Kazarian, music written by Falkoff), "Magic Lover" (written by Kazarian), "Scary Faces" (written by Murphy) and their oldest

See FUNK on page 6

Giamatti film 'Wins'

By Brian Canova
Collegian Staff

"Win Win," from director Thomas McCarthy (The Visitor), mixes snarky wit, dry humor and dark sensibility as it tells the story of Mike Flaherty (Paul Giamatti), a discouraged attorney and high school wrestling coach who finds Kyle (Alex Shaffer), a high school runaway, nearly on his doorstep and takes him into his family.

When money got tight for Flaherty and his family, he made the decision to assume guardianship of one of his clients who was on the verge of being ruled unfit to care for himself and removed from his home by the state of New Jersey. Rather than allow him to be turned over to the will of the courts, Flaherty opted to take responsibility for the man, receiving in exchange a $1,500 monthly stipend from the wealthy aging man's estate.

Giamatti reprises a familiar role, reminiscent of the ones he played in "Sideways" or "American Splendor." A relatively personable individual, Giamatti's Flaherty thrives on self-deprecating humor and awkward interactions with a smart sharp-witted cast of characters around him. He seems to fit perfectly in place in his family. His two daughters, especially the oldest, seem to reflect and parallel much of his comedic style. Not to be completely confused with "Sideways" and "American Splendor," Flaherty does live a happy, high-spirited life, less the stress that monetary problems he's keeping from his wife seem to be having on his health.

Impulsively choosing to assume guardianship of his client, Leo (Burt Young), Flaherty makes the ethical digression of moving the man out of his home anyways and putting him into a retirement home in town, lying to Leo and telling him the judge mandated that he move in there. Days later, the plot progresses when Flaherty discovers Kyle, the son of Leo's estranged daughter who he hasn't seen in 20 years, sitting on the doorstep of Leo's home.

A runaway from Ohio, Kyle visits Leo and spends the night at the Flaherty's home. When Flaherty gets a call from the police the next day after putting Kyle on a bus back home, his wife Jackie starts to pull the deeper story out of him. Exclaiming to him that his mother must be worried sick with no way of knowing where he is, Kyle, with his characteristic gentle yet defensive soft spoken demeanor, pulls his cell phone from his pocket and quietly answers that she could have called at any time.

The relationship that develops between Kyle and Flaherty comes to exist somewhere between the typical father-son bond and that of a mentor-protégé flipped upside down. Kyle accompanies Flaherty to one of his wrestling practices, sitting quietly by the outskirts watching the laughable squad and hopeless coaching staff struggle to achieve some semblance of a regimented practice. That night Kyle asks Flaherty if he can practice with the team the next day and Flaherty tells him that he can.

When Kyle pins his opponent in mere seconds, stunning Flaherty and his cohorts, the tone of the movie gets more exciting, inspiring and rejuvenating. It is an interesting coincidence that Shaffer won the New Jersey State Wrestling Championship as a 17-year-old. Kyle's workout regimen becomes something of an awe-inspiring display of discipline to Flaherty's family as they awake to the sound of him leaving for runs at 5 a.m., lifting weights after that and quitting cigarettes on the spot the day after joining the wrestling team.

The film's killer soundtrack scored by Lyle Workman and featuring The National's "Think You Can Wait" pull together its indie feel and complementing its dry approach.

"Win Win" avoids, for the most part, addressing heavy topics, deflecting them as they are presented with the clever witticisms and letting the tension slowly come to a boil. Life is a bit of a wrestling match, McCarthy seems to be saying. Flaherty asks Kyle in front of the wrestling team how it is he keeps from getting pinned, and how it is he gets back up when he almost does. Kyle thinks for a moment and says he imagines someone holding his head down under water trying to drown him, and tells Flaherty in not so many words that he doesn't let that happen. "Win Win" is about getting back to your feet no matter what's holding you down, and not hesitating for a second.

Local trails a refreshing change of pace

With warmer days on the way, students are headed outside for some fun in the sun. There are a number of local trails and conservation lands in the Amherst area that are ideal for walking or bicycle riding, many of which boast beautiful views and wildlife.

By Chelsea Whitton
Collegian Staff

It seems like spring is here at the University of Massachusetts.

However, soaking in some sun doesn't mean only staying within the University grounds. There are plenty of alternatives to lounging around the campus pond nearby.

The town of Amherst and Amherst College have plentiful opportunities to appreciate the new season such as conservation lands and trails. Unlike the crowded student union lawn or Southwest beach, the conservation lands behind Amherst College are quiet, calm and isolated from the normal hustle of college life.

The Norwottuck Rail Trail, about a mile away from campus, is an 11-mile stretch from Belchertown to Northampton and a great way to get exercise. These trails carve through woods and surround ponds and wetlands, offering a peaceful getaway sure to get your mind out of your studies, albeit temporarily.

The town of Amherst has 1,965 acres of conservation land, more than 40 open fields and 80 miles of foot trails which are maintained within the town border, according to the Amherst Conservation Department website.

The protected wetlands are perfect whether you'd like to sit and get some sun, see diverse plant species or maybe have a chance to see sunning snapping turtles, snakes or even better – beavers.

The pond within the Amherst College Wildlife Sanctuary has a clean trail following the diversified water body, which is home to viewable Great Blue Herons which provides wooden bridges over small streams and benches to rest on. The variations of trees, such as ancient northern red oak and red pines provide enough shade and patches of dwarf ginseng flowers speckle the floor of the woodland.

Taking a break from the concrete and brick of the UMass campus and heading into the wild with friends can help clear your mind for the final push of the semester.

Chelsea Whitton can be reached at cwhitton@student.umass.edu

Spring Concert to get funked up

FUNK from page 5

song "Without Words" (written by Falkoff).

The band hopes to have its EP ready for the concert, but it is still in production.

In the two years since debuting outside of Van Meter, Kids on a Hill has played at various campus-events as well as music venues in Cambridge (Middle East) and Northampton (Bishop's Lounge).

Local psychedelic grunge band Orange Televtsion requested that Kids on a Hill open their show at the Iron Horse Music Hall on Oct. 16, 2010. The group considers that to be its best show to date.

Yet, without a designated manager and content with their current reputation, they don't actively seek to book shows and remain humbled by their recent recognition.

"In thinking about how we came together, we've definitely kept this same sort of impromptu and fun attitude throughout the whole time," said Murphy. "We're even a little bit thrown off, I would say, by the recent attention we've been getting. We definitely do this becauseat's fun and none of us ever sat down and said, 'Let's make a band.' It just happened."

After winning the annual Battle of the Bands event hosted by the University Programming Council on March 21, Kids on a Hill will perform as the opening act to the Spring Concert on Sunday.

Kids on a Hill will take the Mullins Center stage around 7 p.m., as the group of musicians travel far down The Hill from their former residence hall and onto a stage much more gracious than their rehearsal space.

"The Mullins Center is going to be unlike anything we've ever done," said Murphy. "Few musicians get to experience playing on a scale that large, so it's going to be really different.

"I'm a little nervous about it," she added. "I don't know how it's going to sound. I don't know anything, but it's going to be really unique, something we'll never forget and something we'll learn a lot from."

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

Dayton baseball up-and-down thus far

Flyers struggling to play to expectations

BY ERIN CANNON
FLYER NEWS (DAYTON)

Despite early high expectations, the Dayton baseball team is still struggling to find its identity with a .516 record thus far.

The Flyers are currently 4-2 in the Atlantic 10 Conference, and were predicted to finish third in the league by the A-10 Preseason Coaches' Poll. Overall, the team's season has been sporadic, and just recently has rallied for a 17-16 record on the year.

Dayton went on a four-game winning streak from Tuesday, March 29, through Saturday, April 2, defeating the Cincinnati, Temple and Miami.

The winning ways were halted soon after with a three-game losing streak. Dayton gave up 33 runs in losses to Temple, Toledo and Massachusetts.

UD previously traveled to Pepperdine in Malibu, Calif., for three games from Friday, March 25, through Sunday, March 27. Even though the Flyers lost two out of three games, Dayton coach Tony Vittorio said it was a great team-building experience, and helped prepare the Flyers for the current conference travel.

Defense, specifically pitching, has been a struggle for the Flyers this season, the team members said. Junior third basemen C.J. Gillman said there has been "a little bit of [a] lack of concentration."

"We tend to play well a couple games in a row, [and] then we get off track," he said. "I don't think we need to do anything crazy. We just need to play our game."

Vittorio said Gillman has been a great leader for the team all season, and that other upperclassmen need to step up so that the team can be more competitive.

"Guys like C.J. Gillman and [junior utility player] Brian Blasik need to let each opponent know who we are in the ball park," said Vittorio. "C.J. has been doing that all year long, and Brian needs to work on that."

The Flyers hope that some new, fresh faces will lead the team in the right direction. A primarily veteran infield now includes freshman infielder Mel Skochdopole, who Vittorio said is "a great talent." The shortstop is the reigning A-10 Rookie of the Week and is batting .333 in 32 games thus far.

Skochdopole said he was definitely nervous before his first start, but that his teammates have been supportive.

"We got a lot of good leadership this year especially from the infield," he said. "They are always pushing us and trying to make us better, and are a lot of fun guys on and off the field."

Vittorio said Skochdopole has pulled his own weight despite his lack of experience.

"Mel has done a great job knowing he's a part of the lineup," Vittorio said. "The guys have done a great job welcoming him in."

The Flyers next conference games will take place against Richmond on Friday, April 15, through Sunday, April 17, at Time Warner Cable Stadium. Vittorio said he has high hopes and confidence in his team as they continue their season.

Dayton players look on from the bench as a UMass batter takes a swing during their series last weekend. The Flyers, who were predicted to finish third in the Atlantic 10 this season, have shown inconsistency throughout their 33 games, compiling a 17-16 record.

Hey, you know what would be totally super hipster cool?
What?
If you worked for the Daily Collegian.
I MUST go to the basement of the campus center! Collegian, here I come!

Kromko headed to track team

BY JOBY FAWCETT
THE TIMES-TRIBUNE (MCT)

Courtney Kromko never even thought about competing in track and field in college, let alone having the opportunity to compete at a Division I level.

But after a rewarding four-year career where she played a major role in building Western Wayne into a Lackawanna Track Conference Division II power, she earned a scholarship to the University of Massachusetts.

She signed her letter of intent this week to the Atlantic 10 school.

"I never, ever thought this would happen," said Kromko. "If you told me four years ago that this would have happened at the end of my senior year, I would not have believed it. But coach Justin Collins and my teammates really did a lot to help get me here."

A two-time All-Region selection, Kromko set a record at the Robert Spagna Championship meet last spring, leaping 17 feet, 2.5 inches.

She also earned two silver medals at the District 2 Class AA championships last season in the long and triple jumps. Her distance in the triple jump hit 36-4.75 and sent her to the PIAA championship meet.

Her efforts drew recruiters and her decision came down between UMass, where she plans to study psychology and communications, and Richmond.

"It was a tough choice," said Kromko. "I really liked the coach and had a good connection with the girls. I really had fun when I was there. They really took me in and acted like I was already part of the team.

"I'm really looking forward to the challenge," she added. "It seemed like it was home. I really feel like I can do well there."

For now, Kromko will concentrate on the season at Western Wayne, which is off to a 3-0 start. She has a season-best in the long jump of 15-7.5 and 33-0.75.

Varsity Four earn gold for women's rowing

By Ben Lambert
Collegian Staff

After a long day of competition on the Cooper River in Camden, N.J., the Massachusetts women's rowing team had come away with a number of accolades, including a silver medal in the Novice Four and a bronze in the Second Varsity Eight.

However, there was still the crowning achievement to shoot for. In the very last race of the weekend, the Varsity Four sped past the competition to finish first and earn a gold medal.

"There was some pretty great racing going on," said UMass coach Jim Dietz. "Overall, I think it was a good regatta."

However, the positive results didn't mean that the competition wasn't grueling for the UMass squad. "Usually, we beat the team up at the Knecht Cup," said Dietz. "The average person there raced 2,000 meters, or a mile-and-a-quarter, six times. And that's a lot."

On their way to the gold medal, the Varsity Four finished second in its initial heat, first in the semifinal and then the aforementioned first-place finish to pull off the victory. In the final race, junior coxswain Em Chiu, senior Teresa O'Brien, sophomore Meredith Kearney, senior Rachel Spielberg and sophomore Adrienne Breef-Pilz crossed the finish line in a time of 7:46.20, just over three seconds ahead of second-place Buffalo.

Duke, the third-place finisher, clocked in more than seven seconds after the Minutewomen.

The Varsity Four's time in the last race shattered its previous best at the 2011 Knecht Cup, as it was over 23 seconds faster than its 8:09.31 mark in the semifinals.

"Some 30, 35 different colleges were entered [in the Varsity Four]," said Dietz. "So to win is pretty huge."

The closest race of the day was the Second Varsity Eight final, as boats from UMass, Wisconsin and Delaware all finished within two-tenths of a second of one another. Wisconsin just snuck across first to earn the gold, finishing in 6:57.58.

The silver and bronze winners, Delaware and UMass, came in just one-tenth and two-tenths of a second later, respectively.

"The Second Varsity Eight rowed tremendously," said Dietz. "I think that's pretty exciting racing."

The Minutewomen also earned a victory in the Double and a fourth-place finish in the Varsity Eight.

Now, the sights of the team turn to the Atlantic 10 Championships, which takes place on April 16 in Pennsauken, N.J. where UMass will be in pursuit of its 14th conference championship. While the stakes are high, Dietz doesn't seem worried. In fact, he's counting on the lesser physical stress and the team's natural enthusiasm to carry the day.

"Unlike this week's racing, the kids' know they'll only be going down to the course twice. Once in a pretty easy heat, the next in a barn-burner final," said Dietz. "It'll be interesting to see what goes on. Our kids really get up for that regatta."

Ben Lambert can be reached at wlambert@student.umass.edu.

UMASS ATHLETICS

The Massachusetts women's rowing team earned a gold, silver and bronze in last weekend's meet on the Cooper River in Camden, N.J. The team will now shift its attention to the Atlantic 10 Championships, which take place on April 16th in Pennsauken, N.J.

UMASS ATHLETICS

A member of the Massachusetts men's track and field team competes in the discus throw during the UMass invitational on April 9th. The Minutemen took the bronze out of the seven-team field.

Great individual performances abound in UM's recent meet

TRACK from page 10

strong long jumps by grabbing the top spot in the long jump with a distance of 23-02.50. Kevin Spieler followed suit, beating out his competition in the shot-put with a distance of 48-2. The senior tallied a second place finish in the discus throw, as well. David McKenna came up short of fellow upperclassman Spieler, finishing close behind in third as well as seventh in the hammer toss.

Grafov helped the 4x400 meter relay team conquer third place as it posted a time of 3:24.29.

Minutemen place in Husky Decathlon

UMass sent three of its competitors to the Husky Decathlon Invitational in Storrs, Conn. last Thursday and Friday. Sophomore Conor McGee led the three Minutemen in the field after day one, sitting in seventh overall after five events. Saint Louis college transfer Mark Hewitt surpassed McGee in the field, finishing in sixth place with a point total of 5736. McGee finished in 10th with senior Chris Dzidek following close behind in 11th.

UMass will return to action on Saturday for The Minutemen Invitational, its second-straight home meet. The event is slated to begin at 11:30 a.m.

Matt Strong can be reached at mstrong@student.umass.edu.

UMass looks to keep streak alive this weekend

By Stephen Hewitt
Collegian Staff

For the second time in as many weeks, the Massachusetts softball team's scheduled contest was rained out, as showers swept through Massachusetts to postpone the Minutewomen's trip to Boston College on Wednesday afternoon. The game has yet to be rescheduled.

The Maroon and White will now search for their eighth and ninth consecutive victories this weekend when they travel to play Atlantic 10 foe Dayton for a two-game series scheduled for Friday and Saturday afternoon.

The Flyers (13-19, 5-5 A-10) currently sit in seventh place in the conference, two games behind the third-place Minutewomen (16-14, 7-3 A-10), and are sliding as of late, as they have lost 11out of their last 14

UMass is 26-3 all-time against UD, which includes a doubleheader sweep last season that was held at the UMass Softball Complex.

Sara Plourde picked up both victories on the day against the Flyers, as she pitched 13 total innings, striking out 23 and allowing six runs, all earned, in the Minutewomen's 8-2 and 5-4 wins.

Plourde will take the hill in at least one of UMass' two games against Dayton this weekend, which should not be a welcome sight for the Flyers. From March 30th to April 10th, Plourde recorded 30.1 consecutive no-hit innings at the UMass Softball Complex. On the year, she boasts a 14-10 record to go along with a 1.41 ERA. Through 164.1 innings, she has tallied 282 strikeouts, which is nothing newe for the reigning national strikeouts champion.

UD pitchers Amanda Daly and Sarah Wedel respectively started in each game, while also pitching in relief of each other. The duo was unable to tame the UMass lineup, as it combined to give up seven runs and record four strikeouts in Game 1 before allowing five runs and striking out three combined in Game 2.

To this point, neither pitcher has shown encouraging signs this season, as Daly is 2-6 with an 8.01 ERA while Wedel has a record of 3-5 with a 3.86 ERA.

However, the Flyers have a new weapon in the circle this season that they hope can compete with Plourde in the form of freshman Alysha Isaacson.

The Chula Vista, Calif. native was recently named the Atlantic 10 Rookie of the Week for her career performance last Saturday against Saint Louis, when she pitched a complete game, one-hit shutout victory while going 3-for-6 in the two-game series. So far this season, Isaacson boasts a team-best record of 8-7, which includes seven complete games to go along with a 4.03 ERA and 40 strikeouts in 90.1 innings.

At the plate, UD features three batters with a batting average of at least .350: Isaacson (.350), sophomore Kathleen Maloof (.356) and junior Lauren Nacke (.371).

Of the three, Maloof and Nacke are the only ones to have seen action in every game for the Flyers, and they have produced big numbers, combining for 16 home runs and 57 RBIs, both of which are about half of the team's total.

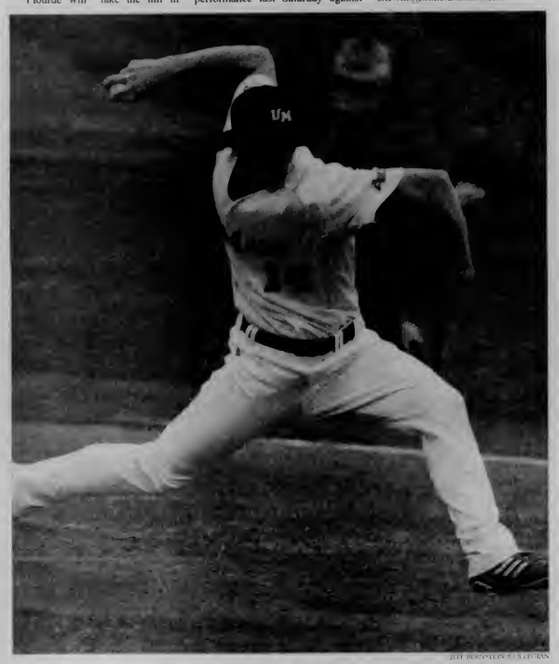
Nacke, with 10 home runs and 30 RBIs, is second in the conference in home runs and third in RBIs. She also holds the Flyers all-time record for home runs with 27 career round-trippers and she is still just a junior.

Friday's game is scheduled for a 3 p.m. start while Saturday's action will get started at noon from the UD Softball Stadium. After the weekend, the Minutewomen will conclude their road trip at Connecticut on Wednesday before starting an 11-game homestand.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Freshman utility player and designated player Tiffany Meeks takes a hack against St. Bonaventure last weekend. Meeks has a .241 average to go along with three home runs and nine RBIs.



JEFF BERNSTEIN/COLLEGIAN

Junior close Leif Sorenson delivers a pitch in a game against Dayton last weekend. Through 19.2 innings, Sorenson has compiled a 3.66 ERA, 15 strikeouts and four saves.

Minutemen's long stretch of games begins against Temple

By Michael Counos
Collegian Staff

The Massachusetts baseball team will have two days off before it begins a six-day stretch of games beginning on Friday.

UMass (9-15, 3-3 Atlantic 10) was scheduled to play Boston College at Earl Lorden Field on Wednesday, but the game was canceled due to inclement weather. The Minutemen will have Wednesday and Thursday off before traveling to Philadelphia, Pa., to take on Temple for a three-game A-10 series. UMass did not play the Owls (15-14, 2-7 A 10) last season, so the majority of this year's roster is unfamiliar with the current team.

Following its series against the Owls, UMass will make up its game against Connecticut at home and then travel Central Connecticut State on Tuesday and finally to Lowell for the first round of the Bean Pot Tournament on Wednesday, April 20.

The Minutemen currently sit in seventh in the A-10 standings while the Owls are last in the conference. UMass has dropped its last three games, including two conference games against Dayton and most recently a non-conference matchup versus Siena. In its last three losses, UMass has been outscored 23-14. The Minutemen's last win came in their home-opener, when they defeated the Flyers (17-16, 4-2 A-10), 9-5.

UMass is hoping it can receive an immediate boost offensively. The Minutemen have had just two players consistently producing at the plate in seniors Matt Gedman and Peter Copa. Gedman has started in 22 of UMass' 24 games, compiling a team-leading .452 batting average and 22 runs. Copa has played in all 24 and currently leads the team in home runs (7) and RBIs (23). His .354 average is second behind Gedman.

It is clear that, aside from that duo, the Minutemen are looking for production from the rest of the lineup as every other UMass starter has a sub-.300 average.

Temple, which is also coming off a cancellation, is looking to get back on the winning page, as it has dropped four consecutive games, all against A-10 opponents. La Salle swept the Owls over the weekend, outscoring them, 27-13. Before that, the Owls lost to Saint Joseph's, 4-3, on April 5.

UMass pitching will be tested against the Owls, who feature 11 players hitting over .300 and a .347 team batting average. Senior Adrian Perez is leading the team in hits with .50, while fellow senior Ryan Ferguson is leading the team in home runs and RBIs with seven and 37, respectively.

Temple features three starting pitchers in junior Brant Norlander, senior Ben White and freshman Matt Hockenberry. Norlander is currently 3-2 with a 4.89 ERA. As an entire staff, the Owls have a 5.83 ERA compared to their opposition's 7.37 ERA.

Following their series with Temple, the Minutemen will host the Huskies (17-12-1, 7-2 in Big East) on Monday at Earl Lorden Field. UMass last played UConn on April 6, dropping the game, 7-1, in Storrs, Conn. The Minutemen managed eight hits in the game with Tom Conley going 2-for-3 with a double, a walk and an RBI while Rich Graef went 2-for-4. Robert Machado was charged with the loss but freshman Aaron Plunkett showed strength, striking out four batters while giving up a run in three innings of relief.

The Huskies have fared well on the road this season, with a 9-4 record. UConn relies on a strong offense led by senior Mike Nemeth and juniors George Springer, Tim Martin, Ryan Fuller and Nick Ahmed, who all hit over .300.

Another strength comes from the mound in Matt Barnes, who boasts a 1.03 ERA in eight starts to go along with a 6-2 record and Bob Van Woert, who had given up just two earned runs in 24.1 innings pitched over his four starts. The two lights-out starters highlight a pitching staff that boasts an ERA of 3.11.

The Minutemen's long-stretch of baseball begins Friday at 3 p.m. Then, UMass will play Saturday and Sunday at 1 p.m. before returning home to take on the Huskies on Monday at 3 p.m.

Michael Counos can be reached at mcounos@student.umass.edu.

Men's track and field teams impress at home

By Matt Strong
Collegian Staff

Home field advantage proved to help the Massachusetts men's track and field team as it placed third in Saturday's UMass Invitational.

Stellar individual performances from several different athletes contributed to a complete team effort as the Minutemen finished the competition with five first-place athletes and a combined eight second and third-place finishes on the day.

The early spring weather set the scene for UMass as it competed in its first home meet, when UMass coach Ken O'Brien's squad tallied a 133-point performance. UMass' 4x100 meter relay team left with an early victory taking first place with a time of 42.43. The team mark was good enough to qualify them for the ICAA Championships, which take place at Princeton the second weekend in May.

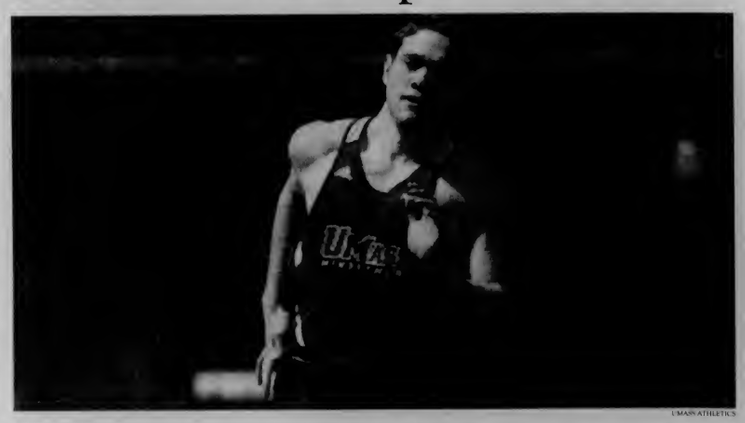
Freshmen Patrick McGowan and Antony Taylor both competed in the 1500-meter run. As McGowan placed second with a time of 3:58.09, Taylor trailed a couple of minutes behind, finishing fifth. Sophomore Paul Grafov and junior Evan Donadt continued their great running of late, each recording a second-place finish in the 400 meter dash and 400 intermediate hurdles, respectively. Freshman Aaron Araujo landed a spot behind Donadt in third, less than a second later.

The Minutemen had two of their five first-place finishers in the sprints and hurdles. Senior Tyler Cotto and freshman Quinn Ryder, members of the first place 4x100 relay team, each added individual first-place performances. Cotto ran an impressive 14.67 mark in the 110-meter hurdles, besting his ICAA qualifier time of last weekend by .11 of a second.

In an interview with UMass Athletics, O'Brien talked about the efficiency of his team's one-two punch, attributing the success to a core of excellent individuals, but stating they're almost secondary to a great supporting cast.

Daniel Wu built on a string of

See TRACK on page 8



UMASS ATHLETICS

After having a very successful weekend at home, the Massachusetts men's track and field team will look to replicate that performance on April 16 when it competes in the Minuteman Invitational. The event is slated to start at 11:30 a.m.

Chicken changes in future?

UM professor attempts to make raising chickens easier

By Katie Landeck
Collegian Staff

From the street, there is nothing different about University of Massachusetts Professor of Plants, Soils and Insect Sciences John Gerber's house. Its neat gardens, brick front and beige siding give it a distinctly suburban look that matches the rest of Harlow Drive, a residential neighborhood just a few miles off campus.

However, unlike the rest of his neighbors, Gerber keeps four hens in the corner of his backyard — Lucy, Ethel, Rosie and Gertie.

"The Ladies," as he calls them, live in a 10-square-foot red henhouse in a corner of his backyard sheltered by an evergreen hedge. The henhouse is an old wooden garbage container he modified, adding several roosting platforms, a nesting box for the animals to lay their eggs and a light bulb that turns on at 2 a.m.

The chickens' enclosure contains a narrow run protected by mesh netting that gives the birds a place to run around and stretch their wings whenever they want. In the summer during the day, Gerber lets them into a larger area of the yard protected by a low fence.

Gerber started to raise chickens eight years ago when he wanted to have a closer connection to his food supply. He keeps the chickens for as long as they can lay eggs then slaughters them for food.

"They are a reminder of what it is to be human," said Gerber. "And that food comes from Mother Nature and farmers, not a grocery store."

However, it was not easy for Gerber to receive permission from the town to raise his hens. Since he lived in a residential area close to the center of town, he had to obtain a special permit allowing him to raise chickens from the Town Zoning Board.

"They used the same application that they use for major development, billboards and parking lots," said Gerber. "It asked me all sorts of crazy question that had nothing to do with five backyard hens. The Zoning Board understands billboard and parking lots, they do not understand chickens, so it was kind of ridiculous."

MATTHEW HARRISON/COLLEGIAN
UMass professor John Gerber is trying to make it easier to raise chickens in Amherst by simplifying the permit process.

It cost him $210, he said, to obtain the special permit allowing him to keep his chickens.

After going through such an ordeal to secure a permit for his hens, Gerber decided he would try to make the permit obtainment process simpler and started a Citizens Petition to change Amherst's town bylaws. The changes he proposed would allow residents to keep up to 12 hens or rabbits in any part of town, regardless of zoning.

"I think it is reasonable to try to raise some of your own food," said Gerber. "There is a real prejudice against raising chicken[s]. I don't ask people to zone my personal values, but it seems okay for someone else to say that I can't have chickens."

In order to have the petition come to a vote at Town Meeting, Gerber had to present the petition to the Amherst Town Planning Board, which is required by law to pres-

Virginia Tech's Ball is first Engineering Dean candidate to appear at UMass

By Nancy Pierce
Collegian Staff

Engineering students, faculty, and administrators were invited yesterday to an open meeting in the Marston engineering building for an opportunity to meet the first of the four finalists for the new Dean of Engineering. Jim Kurose, executive associate dean of the College of Natural Sciences and chair of the search committee for the new dean, began the meeting by introducing Kenneth Ball, a professor of mechanical engineering at Virginia Tech University in Blacksburg, Va.

A new dean is being appointed because the previous dean, Michael Malone, stepped down and is now

VT.EDU
Virginia Tech's Kenneth Ball spoke yesterday as a finalist for Dean of Engineering.

the vice chancellor for research and engagement, according to Kurose.

Kurose chaired the search with the help of the national executive search firm Isaacson Miller. He said the search process began last September with collaboration from the Engineering department and the provost. They placed advertisements in various academic publications and reviewed applications in a series of meetings. Kurose said in March the search committee did in-person interviews with a subset of applicants, ultimately narrowing the field down to four finalists.

Kurose said the applicants were "very high in number, and the quality was absolutely outstanding."

Kenneth Ball has worked as the L.S. Randolph Professor and department head of Mechanical Engineering for Virginia Polytechnic Institute State University for seven years. Prior to that, Ball was a Professor of mechanical engineering and thermal/fluid systems area coordinator at the University of Texas at Austin for 15 years.

Ball began by explaining his background at Virginia Tech and Texas.

Ball emphasized the importance of maintaining a positive rapport within a department, stating that, "To me, there's nothing more important than that, if you don't have that it can hold you back."

Ball talked about his experience at Virginia Tech and cited a project concerning a vehicle able to be driven by blind people, describing it as "an example of an exciting thing we're doing."

Engineering is increasingly multidisciplinary by nature, according to Ball. He also mentioned how engineering is moving toward what he called grand challenges facing society, such as energy, sustainability and conserving water as a resource. Ball talked about bringing the study of engineering "forcibly to these problems, to have a major impact," while describing the future of engineering as "very bright."

When talking about what distinguishes UMass from other schools, Ball mentioned Chancellor Robert Holub's "Framework for Excellence" plan and how, according to him, the vision shows the "elevating stature of the University; that's what I would like to be a part of."

Ball described his style of leadership as a "bottom-up" approach, elaborating by saying that "I try to remember what it's like to be a student, what it's like to be a faculty member, and as a dean what it's like to be a department head."

After presenting his background and delivering his outlook on how to be a leader, Ball opened up the floor for discussion. The first question came from a faculty member inquiring about Ball's perspective on how the UMass campus is different than the campuses at which he has previously worked. Ball responded by

See BALL on page 3

Chicken changes on Amherst's horizon?

CHICKENS from page 2

ent a report at Town Meeting about any proposed changes to the bylaws. There are three proposed changes before this year's Town Meeting.

Both citizens and the planning board developed the first one, Article 33, which simply would allow people to keep up to 12 hens or rabbits. Roosters and other noisy birds would not be permitted under the article.

Article 34 was created by the town Planning Board alone and outlines the regulations that owners of chickens would have to adhere to, should the changes pass. Owners would be responsible for registering their animals for a $10 fee and would be required to have their homes and animals inspected by Animal Welfare officer Carol Hepburn.

In addition, owners would be responsible for notifying their neighbors of their plans to raise chickens. If enough neighbors objected, a hearing would be held. According to Planning Director John Tucker, the hearing would hinge on whether the potential owner was following the rules, not on whether neighbors like chickens.

Petitioners created the final article, Article 35. It is the same as Article 34 except that it would not force potential owners to tell their neighbors.

"The Planning Board is offering an alternative not because they disagree, but just to allow the Town Meeting to decide if they want to have stricter regulations," said Tucker.

The Planning Board recently voted to support all three articles in a six-to-one vote.

Richard Roznoy, a member of the Planning Board and a lawyer accounted for the lone vote against the articles. In a recent planning board meeting, he listed several of his concerns about allowing people to raise hens, which include mice and rats getting into their feed, the new policy possibly becoming too much of a strain on enforcement, and a belief that raising chicken discourages community.

Roznoy will be presenting a minority report against the articles at Town Meeting. He was unavailable for further comment.

Hepburn, the Animal Welfare officer, supports the articles and disagrees that examining the chicken coops will be a stress on her job.

"I already go around to all the farms, so adding a few new ones won't be a problem," said Hepburn.

Hepburn also believes it's important to know where the chickens are in the event that there is ever an epidemic, however unlikely, related to the animals such as bird flu.

The articles will be voted on during Town Meeting, which will be held May 2 in the Amherst Regional Middle School Auditorium starting at 7:30 p.m.

Katie Landeck can be reached at klandeck@student.umass.edu.

UM hears Ball's pitch to be Dean of Engineering

BALL from page 2

saying that since the engineering department at UMass is not as prominent as other colleges' departments, there is ample opportunity for growth, adding that the engineering department would need to do what he feels is consistent with the University's agenda as a whole.

The next question pertained to what it would take for the University to be successful in engineering. Ball replied it would be more "strategic planning."

Ball also discussed criteria for making decisions on how to get resources. He said it's important to investigate areas with significant potential for growth. He said new strategies for energy growth is a clear example of a major opportunity for future funding. He also mentioned the importance of maintaining a balance, and not overflowing all the resources in one department.

Assistant Professor of Mechanical Engineering Yahya Modarres was one among the many faculty and administration of the Engineering apartment who attended the meeting. Modarres was satisfied with the meeting and impressed with Ball. Modarres lauded Ball, stating that "his ideas are very ambitious." Modarres said he is looking for a candidate who will develop the college and bring in more money and more faculty members.

Kurose said the expectations of the new dean are to "lead the College of Engineering and continue to build on the wonderful things happening already and move the college further forward with research, teaching, and service."

Provost James Staros said he will be making the final decision based on all the information accumulated about the candidates and final interviews.

Staros said that "we are looking for a leadership that can get us to that next level of excellence."

Staros commented, he was "absolutely delighted of the quality" of the candidates. He also praised the search committee for their work in attracting the candidates.

Nancy Pierce can be reached at npierce@student.umass.edu.

TAMU.EDU, RPI.EDU
Texas A&M professor John Niedzwecki and RPI professor David Rosowsky are finalists.

Radioactivity inactive in cell phones

Matthew M. Robare

Ever since movie studios first realized that you could film something very small and make it look very large on the screen, they have cranked out sci-fi B-movies in the hundreds. This entailed putting an over-the-hill Boris Karloff in the old Universal Frankenstein set, throwing in a bunch of actors in their mid-to-late 20s who weren't eligible to join the Screen Actor's Guild yet, doing location filming a few hours east of Los Angeles and getting a script quickly from a science fiction author normally being paid a few cents a word by pulp magazines.

A lot of those movies used radiation as a plot device to explain why an iguana, or a tarantula or whatever else was on sale in the pet store closest to the studio had grown to enormous size and was now threatening a small town with no minority residents.

As a result of those movies, I think, more than any actual scientific research, the public has developed an unhealthy fear of radiation. Well, my newly grown second head and I are in complete agreement: the threat of radiation is greatly exaggerated, especially when it comes to cellular phones.

Last year, the City of San Francisco passed an ordinance decreeing that all electronics stores post information on the amount of radiation emitted by cell phones.

Unfortunately for the nanny-statists in 'Frisco, the World Health Organization has said "Current exposure to RF [radiofrequency] fields, such as those emitted by mobile phones and their base stations, is unlikely to induce or promote cancers."

Cell phones can still be dangerous when you're driving and holding the thing to your head and Apple products can explode with alarming regularity. But your phone's radiation isn't going to give you cancer.

The important thing to know about radiation is its penetrating power, which is tied to its frequency and wavelength. High frequency, short wavelength radiation penetrates the human body more easily than low frequency, long wavelength radiation.

To explain this next bit, I'd like to turn it over to my friend, a sock puppet with cardboard electron orbitals so he looks like Ernest Rutherford's "solar system" model of the nucleus, Adam the Atom.

Adam: Hello, kiddies! Before I start I just want to make clear that I am in no way similar to any other character who may have been named with the same pun in mind.

Me: There's no need to be patronizing, Adam, just tell the liberal arts majors the difference between radioactivity and radiation.

Adam: Sure thing! Radioactivity is when an atom like me disintegrates, releasing energy in one of three forms: an alpha particle, which is two protons bound up with neutrons – otherwise known as a helium nucleus, a beta particle, which is just an electron, and gamma rays, which are high energy electromagnetic particles. When a substance decays like that, it's considered radioactive. Yay!

Me: And those three things are radiation?

Adam: Sure! But radiation isn't just those three; any form of energy that's emitted can be considered radiation. Light, heat, microwaves, X-rays – all of them are forms of radiation. The big difference is in how much energy the radiation has. If it has enough energy to knock an electron off an atom, it's called ionizing radiation.

Me: Thank you, Adam.

Ionizing radiation gets the most attention because it is the most dangerous – it's high energy, high frequency and short wavelength, so it can penetrate deep into the body and increase the risk of cancer by interfering with DNA.

However, even then, there are so many trillions of atoms in the body and atoms are mostly empty space that the real determining factor is the dose level. The people at Fukushima who keep going back in there to try to bring it under control are giving up their lives for Japan; the guy in Seattle who doesn't want to eat fish probably doesn't have a thing to worry about; the Pacific Ocean is pretty big, I'm told.

Cell phones use microwaves for communication. Microwaves have wavelengths between one meter and one millimeter – longer than visible light and much longer than those of "hard" forms of radiation, like gamma rays. Microwaves have been used for various consumer purposes for decades now, especially the ovens, although broadcast television used microwaves and satellite TV still does.

It may be that, as the first mobile-intensive generation we'll get cancer from cell phones when we are in our 80s, but right now the evidence suggests otherwise. So just remember to stay clear of the gamma rays, recycle old phones properly and watch out for iExplosions.

Matthew M. Robare is a Collegian columnist. He can be reached at mrobare@student.umass.edu.

Smoking out students' rights on campus

Dave Robertson

In case the spring weather has had you distracted the past few weeks from the news, our campus has been in the middle of an intense discussion in regards to banning any and all tobacco products on our campus. No longer will the 20 feet away from buildings smoking policy stand, the little grey poles, cigarette disposals, surrounded by students will disappear and the crowd outside the People's Market in the Student Union will disperse as the ban goes into effect in 2013.

The intended consequences of the ban, according to the University Executive Council, the University Health Council, and several other notable individuals including Professor Wilmore Webley and Tobias Baskin are to protect the rights and air of non-smokers. While this is a fundamental battle ongoing in the United States today, such as questioning where our rights end and other's right begin, there are far more issues that prevent such a policy from being effective in the first place. Namely, how the hell do we enforce such a ban?

The jurisdiction outside of dormitories is subject to two enforcing bodies: The University of Massachusetts Police Department, whether you like them or not, do a great job ensuring that the peace is kept for the most part and that everything proceeds smoothly. The Resident Assistants, another group both loved and hated by the general student body, usually handle situations inside the buildings, but, what may be to your surprise, do have jurisdiction across the entirety of campus.

Here's the catch though, no matter where you live the authority is the Assistant Resident Director or Resident Director that is in charge of the RA who wrote you up for smoking no matter where you were written up on campus. That means if I was caught smoking on campus by an RA from Washington I would have to trek down to the freshmen dorm in Southwest despite living in an upper-classmen dorm in Central. The question here is why does that RD or ARD care about something so harmless? Are they really going to ruin a student's academic career over a quick puff when they don't even live in their cluster?

So who is going to enforce the smoking ban? Are we going to have RA's roaming campus with clipboards on their way to class, ensuring that students aren't sneaking a quick smoke behind the dumpsters and in the alleyways of our University?

Are the police going to suit up in gas masks and riot gear to walk around and bust those lighting up? In either case both solutions seem to be a waste of resources that could be used elsewhere to address more serious problems, because apparently smoking takes precedence over people tearing apart bathrooms when drunk, fist fights or legitimate medical emergencies.

While I'm sure the police who are bored working the Monday morning shifts will be glad to have an alternative to the standard traffic patrol on Massachusetts Ave., walking around and telling smokers to douse their cigarettes will probably get old quickly, and the Amherst town police who I have seen on a number of occasions won't care because it's not a town bylaw. It's literally not their problem, so why bother? The last time I checked, not one front lawn has been torn apart because of tobacco, nor has anyone woken up next to someone they don't know because they bummed a cigarette on a Friday night.

Another question the University and the ban-supporters have failed to address is something else that everyone is discussing as their wallets get thinner, which is how much will this ban cost to enforce? If smoking is effectively "outlawed" on campus people will continue to smoke.

If you think that people will voluntarily comply with such a ban simply ask the experts how hard it is to quit. I've spoken to plenty of smokers that said it's one of the most addicting choices they've ever made. Still, we all passed eighth grade health and we know the risks. Smoking will continue to happen, and to be honest I think such a ban will only save smokers from leaving their dorm room in the first place. Even if your roommate doesn't like it most students will find a friend within the dorm and smoke in a social setting.

If I recall my time in Professor Webley's class, socialized smoking is one of the top ways to become initially or further addicted. Even if 95 percent of the population abides by the new rule, those who run the risk of being caught by smoking are most likely the ones that currently light up several times a day. Let's assume that .5 percent of campus ignores this ban and smokes lightly with three cigarettes a day. This means on an average day there would be approximately 300 violations of the policy, and that's only smoking. The weekends would undoubtedly have violations in the thousands, and once again this is only for smoking.

The only option for this new policy to actually be effective is for the University to increase the number of RA's on duty, or rely on students abiding voluntarily which is nothing short of a dream.

So the choice here is pretty clear, rely on those who oppose the law, essentially trust the "criminals" who are exercising their right or turn the campus into a police state where any authority figure is looking to write up students to ensure that smoking stops, rather then address the real problems here on campus.

Before any ban goes into effect, and not just for smoking, the University needs to reflect on the impractical reality of enforcing anything not on the law books. Forcing the problem underground isn't truly addressing the problem. Asking the police to help enforce such a poorly thought out decision is a gross, risky misallocation of resources that could possibly serve the student body better in addressing more serious issues.

Despite what you may think of the ban, whether it's a step in the wrong direction or a move towards cleaner skies and less second-hand smoke, is the benefit worth the faced opposition? With much more serious issues to address I don't think the student body, nor the University, should be fooled into such a half-baked plan.

Dave Robertson is the Secretary of Public Policy and External Affairs for the SGA and can be reached at darob0@student.umass.edu.

Budget cuts deeper into the wounds of the suffering

Ashley O'Neil

Yes, we know, there have been serious cuts for government spending. It's all everyone could hear about for days in the news, and the government almost shut down in the process. Up until the very last minute Republicans fought to cut spending significantly from the wrong budgets. Then, Congress decided it would become a hero for a short amount of time and save 80,000 of federal workers from furlough. But, apparently this scare wasn't a big enough deal to get America to care about making a change or take a public stance at harsh budget cuts affecting their daily lives.

So who is being affected by the hacking of funds? Apparently it is the groups that need the funds the most. And while the most vulnerable bits of society get pushed into a corner, everyone gets a piece of "the cut."

The now Republican-led House is telling big billion-dollar corporations, "Hey great job, here's a tax cut. How are you this morning six-figure-and-above-earner? You really earned a break with the IRS, didn't you?

"Oh whoops, I didn't see you there unimportant youth center. You're way back there in the unnoticed and dangerous neighborhood. You're cut. I'm sorry, what do you need single mother? A free mammogram from Planned Parenthood? Guess you didn't make the cut."

Did we fix the deficit yet? No, not yet. There's still public education, senior programs, and subsidized housing to dip into. They have plenty of money to fill the void, right?

This sounds harsh, but this is how I imagine the discussions among the Republicans that fully backed the slashes in our budget this year. Could it have gone any differently?

Former Ohio Democratic Congressman Tony P. Hall is so infuriated with the irresponsible actions of his Republican neighbors that he has called on America to participate in a hunger strike that began March 26, 2011.

In 1993, Congress cut the House Select Committee on Hunger, a program that was created to help the needs of poor and hungry people in America. Congressman Hall moved Americans by participating in a 22-day hunger strike to protest, a strike that many Americans and other congressmen also took part in.

> The cuts do affect us, we can change what gets cut and how Congress finds that money from those that can actually afford to give it up.

Today's budget cuts are so far beyond that one event in 1993, because multiple programs will suffer this time around. Women without access to basic OB-GYN care have higher risks of death due to undetected cancer and birth complications. Their children that depend on their community center programs or a free lunch at school will starve. The list goes on and on while the rich benefit from their continued favor by the GOP.

Former Congressman Hall has called on us again to participate in a new fast to protest the recent proposed budget cuts. Yes, cuts are necessary. Yes, there is a deficit. But are we supposed to lie here and take whatever they throw at us? No. We are young students that are going to be running this country in the next 10 years or so and we have to speak up.

President Barack Obama is just as outraged as Congressman Hall, speaking before the House on how these cuts proposed are completely out of the question. According to the New York Times, his speech on Wednesday called for a cut of $4 trillion dollars over the course of 12 years, and his goal is to keep up with "Democratic core values" as he reassesses what the Republicans were proposing for cuts. While the Republican proposed budget is planed to take 10 years, and will cut $4.4 trillion the programs being cut will hinder basic human rights. A vote took place in the House on Thursday, but the bill will only last through September 2011, making any current agreements extremely temporary.

The cuts do affect us, but we can change what gets cut and how Congress finds that money from those that can actually afford to give it up. The fast started March 26, but it will continue through April 24, (also Good Friday).

I myself have started the fast, along with 36,000 strong Americans with numbers rising. A community center leader in the Bronx, Heidi Hynes, recently posted an editorial-opinion in City Limits Magazine stating that she will "hunger and thirst for justice." Hungerfast.org provides more information about who is fasting and why. You can like it on Facebook, post a tweet on your Twitter, and give up on the McDonald's for a few days while you reflect on the fact that there are 45 million Americans that are hungry right now and not by choice.

Even Kevin Anderson of World Food Program USA is promoting this cause, because what has been proposed has to be told "No." Love your country, take a stand, get the idea out of your head that we can't do anything about it, because it is our own mentality that prevents us from being able to make a change. Today's Internet-addicted world should help us, not hinder us. Do the right thing, even if you are unable to physically fast, be aware and know your rights. This is our country and we need to take it back.

Extravaganja brings familiar smell to town

By Andrew Sheridan
Collegian Staff

As April wears on and finals sneak onto the radar, many students tend to talk about the year coming to an end. Before the sun sets on another year at the University of Massachusetts, however, there is at least one major event to attend: Extravaganja.

This year marks the twentieth anniversary of Amherst's historic festival. Taking over Amherst's South Common for Saturday and Sunday, the event centers around the celebration of cannabis culture, as well as protest of what activists view as the "marijuana prohibition" that exists in the United States.

Extravaganja is sponsored and organized by the UMass Cannabis Reform Coalition, a student organization dedicated to ending the "war on drugs" and reforming the way that our legal system deals with marijuana. While Extravaganja is their largest annual event, they are active throughout the year. In the past, the group has launched campaigns to [illegible] person for and pass awareness of cannabis use [illegible] rights. "We don't want it to be pot humor" said Adam Freed, treasurer of the CRC. "We want [marijuana] to be accepted culturally, medically and legally, just as if it were any other harmless substance."

While in the past Extravaganja has been a one-day event, it has been expanded this year to a full weekend-long event. "Basically it's our twentieth anniversary," said Freed "so we decided to celebrate by having it go two days."

The festival's main attractions are, as always, musicians and speakers who take to the stage in support of cannabis. Vendors of exotic foods, colorful clothing and smoking paraphernalia will also be flooding the commons, hanging their wares directly [illegible]

Saturday's [illegible] feature local bands including [illegible] The Hill," who earned their spot by beating out [illegible] at March's battle of the bands. Returning for yet another show, last year's headliners "Radio Free" and "Pinnacle Fiasco" will also be taking the stage alongside a host of local artists.

Sunday's talent is set to include Amherst-based "Orange Television" as well as such touring groups as "Tribe Movement" and "Spiritual Rez."

New this year is the presence of private sponsorship. Area businesses such as Captain Candy have supplemented the CRC's usual fundraising activities, allowing the group to better supply the festival with audio equipment and activity booths.

This weekend's keynote speaker will be John Sinclair, a socialist radical who spent the 1960's raising [illegible] racial equality. Sinclair gained national notoriety in 1969 when he was arrested for possession of [illegible] of marijuana and sentenced to ten years in prison. [illegible] quickly became a rallying point for the legalization movement, and his imprisonment was [illegible] by such high-profile entertainers as John Lennon and Stevie Wonder.

Other Extravaganja attractions are set to include a D.I.Y. tent and speaker area for those who want to escape the elements. An art area will also be set up, with a tie-dye station and body paints for those who wish to leave more colorful than they arrived.

While possessions of small amounts of marijuana no longer carry criminal charges in this state, its possession and use are still illegal, making Extravaganja a historic drug use a serious legal problem. Attendees can toke in peace, however, thanks to a long-standing peace accord between the CRC and the Amherst Police, wherein possession and use of marijuana on the South Common are tolerated as an act of peaceful protest. Attendees should be warned, however, that the public consumption of alcohol and other drugs will still be prosecuted as usual.

Extravaganja starts at noon on Saturday, and will be held regardless of rain. The threat of lightning could shut the event down, but as of the time of printing, no thunderstorms are predicted. Rain or shine, supporters of cannabis are sure to be out in force, celebrating and partaking in the herb that they love.

Audiences get ready to 'Scream' again

By Herb Scribner
Collegian Staff

Do you like scary movies?

Everyone remembers the opening line from the first "Scream" film that follows Sidney Prescott (Neve Cambell) and her fight for survival against a serial killer (nicknamed Ghostface) and all the terror that the killer brings to her group of friends. From Deputy Dewey Riley (David Arquette), to reporter Gale Weathers (Courteney Cox) and all the others, the masked killer watches over those of Woodsboro, Calif., and won't seem to go away.

In spirit the release of "Scream 4" on Friday, here is an extensive look over the Scream series to help everyone catch up.

Sidney's Story

When the first "Scream" film opened in theaters, viewers were treated to a happy-go-lucky, pretty, lax girl in Sidney Prescott, one who was having usual teenage romance troubles with her boyfriend Billy. She had a shady past, at least regarding her mother's rape and murder, but she appeared to be fine with the way her life was going.

Once the murders started happening, Sidney's life took a serious downturn and spiraled to a point where she was not even a shade of the self viewers saw back in the film that debuted in 1996.

Over the course of the three films, Sidney lost trust in all those around her – except for Gale and Dewey, who she recognizes to be the only people she can be assured won't hurt her. She's even lost her greatest friends including Dewey's sister Tatum and ultra horror-movie-nerd, Randy Meeks.

Her boyfriend Billy was revealed to be the first murderer along with her pal Stu; people always question her motives behind the acts she commits and she's always cautious when dealing with people in new lights. By the time of the third film, Sidney locks herself in the middle of nowhere in California, hiding herself from the new killer that springs to life.

It's all a part of the character development of Sidney. She's grown up right before the viewers. She's been noticed as that hot teenage girl, to that experimenting/happy college chick, to the hidden exile that just wants to be left alone. More importantly though, viewers have seen the terror that once plagued Sidney in the opening film vanish by the time she faced off against the third killer – who ended up being her half-brother.

With the fourth "Scream" film coming out, one must wonder what Sidney has developed into over the 10-year gap. When the third film concluded, Sidney seemed at peace with everything that had occurred. She felt the fight was over, so maybe she went back to being that sweet girl that first tossed Billy Loomis out of the window. Or maybe she returns back to that guarded self, still wary of all those who try to leach onto her life.

Romantic terror

One constant theme in the opening "Scream" films is that of romance.

Most romantic instances are seen by the budding relationship between Dewey and Gale, who are a misfit little couple that always seem to, well, never actually become a couple.

While they started as a push by the over-the-top journalist Gale to get some intriguing information from the dorky cop Dewey in the first film, by the time the third film rolled around they were bickering buddies that easily had some romantic chemistry between them. After the murders end in the third film, Dewey actually proposes to Gale, and she happily accepts.

The fourth film will be interesting because, as far as viewers know, this is the first time we're going to see the couple together. The end of the first two films concluded with the two in a "maybe they're together, maybe they're not," scenario.

Sidney has also had her fair case of romantic troubles since the beginning of the series. Her first romance came in Billy Loomis, who was revealed to be one of the opening killers. It was told in the film that the two lovebirds had a very hot and heavy relationship before the murder of Sidney's mother, which identifies them as one strong couple.

Though after you murder a couple of people, it's the romance that starts to die.

It was a surprise then that Sidney picked up the romantic game again in her college years with her new boyfriend, Derek (Jerry O'Connell). They appear to be a happy couple in the film as well, until suspicions rise that Derek is the killer. This is the final time in the first three movies that viewers see Sidney have a romantic interest. Even though Derek isn't the actual killer, having two lovers that are accused of being serial killers certainly shakes her trust.

And of course all the other romantic twists and turns that are shown in the films usually end with a stab of a swift blade.

Ghostface Gallery

Three movies, five killers.

MCT

The films have offered viewers a lot of different faces to go alongside that Ghostface mask. The first one featured Billy and Stu, both of whom were surprises for the audience to witness.

Many didn't take Stu seriously in the first film, as he displayed that 90s lax bro type of style that is usually associated with comedic relief. Billy was even stabbed in the latter half of the film, and presumed dead, so his revelation of being the killer is quite the twist.

The motive is actually quite the scream as well. Though Stu is just a lapdog that is obsessed with horror films, Billy reveals that he was the one that slaughtered Sidney's mother.

Fast forward to the second film, and the killers reveal to be Mickey – a classmate of Sidney's – and Debbi Salt. Don't recognize her? Sidney did. Salt is actually Billy Loomis' mother, the same mother that left Billy and his father and drove the former to begin the trail of tears, err, blood.

Though the idea of Billy's mother being the killer falls in line with horror movies of the past, it was a bit of a disappointment for a killer that not only ended Randy's life, but also nearly killed Deputy Dewey.

For the third film, the killer's reveal was actually one of the most intense moments of the entire series, rivaling the reveal of the first film. Ghostface revealed to be Roman, the director of the third Stab movie (which are loosely based off of the events of Woodsboro and serve as a pseudo-Scream series). Roman even reveals to be Sidney's half brother. Talk about your twists.

It's a common theme amongst the killers to not only have some connection to Sidney's past, but to also reveal themselves in this grand soliloquy of a moment. Not to mention, they usually all have a connection to the horror movies. Take that into consideration as "Scream 4" opens up.

Predictions for Prescott

So where does all of this leave us? Well, the premise of the fourth "Scream" film has Sidney returning to Woodsboro for the anniversary of the initial murders as a part of a book tour. And as always, the killings return.

We've seen Sidney progress as a character and gain some valuable history lessons along the way. She's learned not to trust, she's learned not to love and she's learned how to crack some skulls. What else is there for her to really learn?

Nothing.

It's possible that the next step in Sidney's story isn't to continue the downward spiral that she's faced in the previous three movies. Rather, it may be her turn to teach a new group of terrorized youth as Ghostface makes his moves.

Or maybe, Sidney has taken that final step towards facing the killer by donning the mask herself.

Manny meeting 2011 expectations

By Herb Scribner
Collegian Staff

At the beginning of the 2011 season, Massachusetts men's lacrosse team coach Greg Cannella set some goals for attackman Will Manny.

He wanted Manny to assume a leadership role and carry the weight of the Minutemen on his shoulders as they progressed through their second season in the Colonial Athletic Conference.

With three games remaining before a potential postseason, Cannella explained that Manny has indeed met those initial expectations.

"I think in terms of leadership [he has met the expectations]," said Cannella. "It's hard for young players, and he's still a young player as a sophomore, it's hard for those guys to take on a leadership role on their own."

Though Cannella admitted that Manny has had to work with players like Anthony Biscardi and Ryan Hantverk to help with leading the team, he has seen a consistent effort from Manny on all ends of the field.

"Willy's been fairly consistent," said Cannella. "It kind of feels like he has to put the team on his shoulders and he does it. He's done a good job of managing his game [and] he's taken advantage of his opportunities that he's gotten. That's so important to guys, kind of letting the game to come to them."

Manny is a natural on the lacrosse field as he has earned a point in all of the UMass (7-3, 2-1 CAA) game his season, which is the current longest streak on the team. This is despite the fact that Manny went through struggles early in the season, according to Cannella.

Though the sophomore opened up the season with an impressive performance against then-No.12 Army (one goal, two assists), it was the following game against Hartford that saw Manny achieve career-high numbers.

Manny notched four goals in the second half (a career-high) in the Feb. 19 encounter, as well as an assist to give a career-high five points in the contest. Additionally, one of the goals was a game-winner.

More career-high numbers followed against then-No.20 Brown and Albany, as he earned three assists in both games to tie his career-high in assists for an individual game. Early this month against Saint Joseph's, Manny tied his career-high five points again as he notched another four goals and an assist. This brought his total assist count to 16 between March 5 and April 2 (a five-game span).

In the overtime thriller against Towson last Saturday, Manny managed his second-consecutive game with four goals.

Though Cannella said that the game comes naturally to Manny, he also explained that last year's CAA Rookie of the Year has been putting in the extra effort.

"I've seen him work hard, I've seen him care, I've seen him go out extra and shoot, I've seen him change his shots up, I've seen him do what you expect your really good players to do," said Cannella.

As the season progresses forward, Cannella expects Manny to keep the offense motivated as the Minutemen compete against another top offense in Drexel on Saturday.

"I expect him to do what he does – to work hard, to keep the offensive group motivated, especially the attack group motivated, keep them under control [and] keep them composed," said Cannella.

With Manny being a focus of Cannella's, the UMass coaching staff wants Manny to continue to balance out his leadership and the way he plays his game because it'll help drive the team through the tough schedule ahead.

"[We continue] to ask him not to do too much and that includes in the leadership role," said Cannella.

"You've got to take care of your game as well as you lead the team. That's the hardest thing for guys as college players is to be able to lead the right way and go out and play the right way.

"Some guys will focus more on their play and not enough on leadership, and some guys will go all leadership and their play struggles," he added. "I think he's finding that really good balance at this point."

Herb Scribner can be reached at hscribne@student.umass.edu.

◆ NO PASSES

High–powered offenses clash

By Jay Asser
Collegian Staff

In a battle between two high-scoring offenses, the Massachusetts men's lacrosse team will square off against Colonial Athletic Association opponent Drexel on Saturday at Garber Field. The No. 14 Minutemen will make their return home after being on the road for nearly a month.

While the three-game road stint produced two wins, University of Massachusetts coach Greg Cannella is looking for his team to get a shot of energy from being back at Garber.

"Guys take a lot of pride in playing and practicing out on Garber so hopefully it does [help]," said Cannella. "You take out the travel equation and that certainly helps you a little bit, not being on a bus for seven hours. ...It takes a little bit out of your legs and we won't have to deal with that this week."

The Minutemen (7-3, 2-1 CAA) are coming off consecutive victories, including an overtime thriller against Towson last Saturday. After facing struggles in a four-game stretch in the heart of its schedule, UMass appears to be getting back to early-season form when it began 4-0.

Going up against a potent attack in the Dragons (6-5, 2-2 CAA) this weekend, the Minutemen will have their hands full with trying to both slow down and keep up with the highest-scoring team in the conference (11 goals per game).

Being ranked right behind Drexel in offense at 10.5 goals per game and having the ability to grind out wins with its stout defense (ranked No. 2 in the CAA, 8.07 goals against average), UMass is more than capable of giving the Dragons fits.

"We would love a fast pace in all our games but we've come to the realization now at this point in the season that teams aren't going to play that way against us, they're going to slow it down so we do have to grind it out, we do have to be patient with our offensive possessions in particular," said Cannella.

Drexel, however, will look to score and score a lot. When reaching double-figures this season in goals, the Dragons are 5-1. Leading their attack is senior Scott Perri, who anchors Drexel as a co-captain.

Perri leads the CAA in goals scored (29), assists (21) and points (50) this season. Though limiting his opportunities will be a point of emphasis for UMass on Saturday, it will be easier said than done.

"It's hard to contain him because you slide to him early, he feeds the ball," said Cannella. "If you don't slide to him, he scores the ball."

Fortunately for the Minutemen, the defense will have experience playing against similar talent in their offense. Going up against players like Anthony Biscardi, Art Kell and Will Manny every practice will do nothing but prepare them for opponents, Cannella feels.

"I think it helps those guys," said Cannella. "What has helped those guys is their approach, their approach every day, their approach with coach Burns and their preparations, their actions there on the practice field and their attention to detail, that's what helps."

JEFF BERNSTEIN/COLLEGIAN

The Minutemen gather during their last home game against Penn State.

In the first-ever meeting between the two teams last year on May 1, Drexel handed UMass a 12-6 loss in the final game of the regular season.

After coming out of the gates with a 3-0 advantage, the Minutemen allowed a 7-0 run by the Dragons which extended to an 11-2 run to bridge the first and forth quarter. Perri scored a game-high four goals while Ryan Liebel tallied a pair of goals for UMass in a losing effort.

The Minutemen will look for a different result on Saturday with the contest scheduled for a 1 p.m. start.

Jay Asser can be reached at jasser@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Jackie Lyons, above, scored five goals against the Spiders in the 2010 title game.

Rematch with the Spiders

By Dan Gigliotti
Collegian Staff

After a couple of slow starts in its opening two A-10 games against La Salle and Temple, UMass got off to a quick lead against the Dukes, taking a 5-0 lead just over 15 minutes into the opening half.

Minutewomen coach Angela McMahon would appreciate seeing the same intensity to begin this weekend's games.

"Attacking-wise I really want us to set the tone against both teams and really come out firing and getting a lot of good looks on [the] cage," said McMahon.

Based on the past four games, McMahon has little to worry about when it comes to the attack, as the Minutewomen have produced a fury of goals. UMass has averaged 14.5 goals per game in conference play and are the top-scoring offense in the A-10 (14.23 goals per game).

The Minutewomen are receiving production from plenty of different players, including freshman Katie Ferris, who continued her high-scoring freshman campaign with 10 points (nine goals, one assist) in two games last weekend.

Ferris and junior Ali Houlis, received A-10 accolades for their play as they were named Rookie and Defensive Players of the Week, respectively.

"[Ali's] really great about hustling and doing the dirty work for us," said McMahon. "Defensively, she's one our leaders on the defensive end. She's constantly communicating making sure everyone's on the same page."

GW and Richmond rank among the lowest in the conference in goals against average with 11.64 and 12.98, respectively, but their offensive outputs indicate that this weekend's matchups could end up in a shootout.

The Colonials are averaging nearly 15 goals per game in their five wins and are currently scoring over 11 goals per game total. GW split its four A-10 games this season, behind the play of junior midfielder Sarah Phillips who leads the team with 53 points this season (30 goals, 23 assists).

In a rematch of last year's A-10 tournament final, UMass's game against Richmond on Sunday could be an indication of which team will earn the No. 1 spot for this year's postseason tournament.

Richmond boasts a perfect A-10 record, tied atop the conference standings.

A Minutewomen victory might be contingent on slowing down junior midfielder Mary Flowers.

Flowers is second in the A-10 in goals and points per game (2.62 goals per game, 4.15 points per game), trailing only Ferris in both categories.

Aside from the individual threats on either team, McMahon is concerned more with stopping the imposing team offenses of each team more than anything else.

"Both teams are very balanced scoring, they don't necessarily have one player that does it all, so we're going to have to play really good, solid team defense," said McMahon.

Dan Gigliotti can be reached at digliot@student.umass.edu.

UMass prepares for difficult A–10 foes

By Jackson Alexander
Collegian Staff

Head coach Angela McMahon and the No. 15 Massachusetts women's lacrosse team couldn't have asked for a better start in Atlantic 10 play. But the Minutewomen's clean Atlantic 10 record will be put to the test this weekend against two of the best teams in the league.

UMass has won its first four conference games and possesses an impressive 11-2 record going into this weekend, which has pleased McMahon.

"I think it's been great for us, especially for building confidence and being able to get a lot of different players in and having a lot of different people scoring," said McMahon.

The Minutewomen will host George Washington on Friday, then Richmond on Sunday. Both games will have strong postseason implications as the Minutewomen continually find themselves matched up with Richmond in the postseason, including last year's championship game.

"I would say in our conference it's a huge game for us," said McMahon on the Richmond game. "Depending on if we take care of business against George Washington it's probably going to determine who gets the top seed in the A-10 Tournament."

Currently, the Minutewomen and the Spiders sit atop the A-10 standings, each with 4-0 records, while the Colonials enter Friday's game at 2-2 in conference play and are tied for third place.

"There are a couple of teams in the A-10 that really can compete with any of those top programs," said McMahon.

This year, UMass has played a vital role in putting the A-10 on the map. Early in the season they defeated then-No. 18 Boston University and then played tough games with No. 2 Northwestern and No. 7 Albany. The tough non-conference schedule, combined with their 11-2 record, has earned them the No. 15 rank in the nation.

The Minutewomen are not the only team making strides from the A-10 as several teams have added nationally-ranked teams to their respective schedules. Based on the current Insider Magazine Women's Lacrosse Top 20, six different A-10 teams have played teams ranked in the top 20. This includes Temple, the Colonials, the Minutewomen, St. Bonaventure and Duquesne.

Meanwhile, Richmond has had a tough non-conference schedule as they have compiled an impressive resume that includes No. 1 Maryland, No. 4 Duke, No. 6 North Carolina, No. 9 James Madison, No. 11 Virginia and No. 18 William and Mary.

"It's a conference that has been improving and getting better and hopefully we have some more nationally ranked teams in our conference as we go forward," said McMahon.

Despite adding top 20 teams to their schedules, the various A-10 teams haven't found successful results as they went a combined 0-12 against teams in the current top 20.

McMahon attributes the domination of A-10 teams to the overall depth of the power conferences.

"I think the biggest thing is the depth of those confcrences where teams one through six are all in the top 15," said McMahon.

Jackson Alexander can be reached at jfalexan@student.umass.edu.

New building commemorates Parks

Minuteman Marching Band has new permanent home in memory of its beloved late director

By Herb Scribner
Collegian Staff

The University of Massachusetts University Concert Band commemorated its late band director George N. Parks on Sunday afternoon with a performance and the unveiling of the George N. Parks Minuteman Marching Band Building.

"Finally, a place to be," said Todd Monroe, a UMass alumnus. "It feels like home. You're outside, [there's] wind, rain, hail [and] snow all in one day, the one place to be is inside, and now we have a place," he said.

Interim Director Thomas P. Hannum led the building's opening Sunday, an event sponsored by the fraternities Kappa Kappa Si and Tau Beta Kappa. Hannum addressed the crowd from the top of a second-storey balcony in the new practice room.

Although the building's official opening and commemoration is scheduled for Nov. 5, Hannum asked the audience to help open the building in a different way.

"I thought it'd be sort of nice if we christened this place in our own way … by doing a little singing of [Frank Sinatra's] 'My Way,'" said Hannum.

The audience, filled with current and former band members, accordingly broke out into song. Afterwards, the crowd dispersed to tour the rest of the building.

The band's new home is unfinished, as construction will continue until the official opening next fall. The floors are neither tiled nor carpeted, and the walls are not heavily decorated. Additionally, several rooms on the upper floor (including a video room, a shower and a bathroom) remain empty and uncompleted.

"As you might imagine, there are still a number of details that remain unfinished with the new Band Building, but it is close enough for us to share its potential with our Minuteman Band family," Hannum explained on the event page of the building's opening on the UMass website.

Although the building remains undecorated, Monroe, a former trumpeter, explained he could feel Parks' presence in the building.

"He's got his touch on here," said Monroe. "It's definitely a landmark place to come visit. Once you feel the history of how long we've gone without [such a building], you're going to feel like you're home."

Associate Director Michael J. Klesch said the building was important to establish for the band "so that we can all see what the vision is for this program to move into the future."

"I think everybody's going to be blown away" by the finished product, he added.

At the Concert Band's performance earlier that day at the Fine Arts Center, Hannum spoke to Parks' involvement with the new building.

"[He wanted to] provide a home and a building for these people so that they'd have a place to go to be together," said Hannum. "Whatever George sets out to do, it gets done."

Sophomore Andrea Gonzalez, a trumpet player, also detailed the importance of the new band building as she recalled some logistical troubles she dealt with her freshman year.

"I remember doing band freshman year and having to carry a ton of garments from my dorm to the field in Southwest," said Gonzalez. "It's a lot of work, and I feel like [the band] really deserves to have a building."

Gonzalez was part of the University Concert Band that performed earlier in the day at the FAC with six songs dedicated to the late director.

"We thought we'd play a couple of tunes that he'd particularly enjoy," said Hannum at the concert.

One of these tunes was "Danny Boy," which Klesch explained is a song Parks really wanted to see performed, as he felt it had a personal and familial touch for him.

"The fact that we got to play a lot of the pieces that he was interested in playing is a big deal," said Gonzalez. "It's cool to see what other people can do with the program as well."

Gonzalez said Klesch is one of the people taking control of the program. Like Gonzalez, Hannum praised Klesch for his work with the band.

"He brings so much to the table and his contributions are immense," said Hannum. "I'm very fortunate to be a part of this program and to have many great people who are also associated with it. There's no one else that defines caring and sharing more than Klesch."

Hannum said caring and sharing were among the main themes of both the building's opening and the concert's aim of capturing Parks' ethos. Additionally, it was the anthem Parks used in raising funds for the building.

"[Parks] really tried to get people motivated to care and share," said Hannum.

The concert featured six songs that differentiated between soft and fast-paced. One of the faster numbers was Erykah Badu's "Rimshot," which featured Alex King on the snare drum right before intermission.

After intermission, the band played "Elements (Petite Symphony)," and "Greensleeves," before finishing out with Al Hirt's "Bugler's Holiday."

Swap site aims to help students save on texts

By Dmitriy Shapiro
Collegian Correspondent

After a year of development, students at the University of Massachusetts now have a new, more affordable source to buy their textbooks. Developed and designed by UMass students in a coordinated effort by the UMass Student Government Association and the Association for Computing Machinery – the UMass Computer Science club – the free, user-based social application umassbookswap.com became available to Five College students April 7.

Modeled after larger textbook swap websites, UMass Bookswap is aimed specifically at Five College students in the hopes of creating a localized experience. After registering with the website using a Five College email address, users can post the textbooks they want to sell or trade, or search for textbooks they need. The site's creators aimed to keep the platform simple, user-friendly and to help users save a lot of money.

During the previous year's SGA election, the victorious Brandon Tower/Mike Fox administration had pushed a platform promising more student input into improvements they wanted to make during their tenure. Their campaign, "UMass that UMade," gathered feedback from students they met on the campaign trail, ultimately leading the two to discover that high textbook prices were a persistent concern.

After assuming office last spring, the Tower/Fox administration selected senior economics major Sam Azar as the Secretary of Web and Media Management for the SGA. According to Azar, SGA President Brandon Tower proposed the project during Azar's interview, asking whether such a project could be completed within the year, to which Azar satisfactorily responded.

"During the campaign, students expressed their concern with what they believed to be unfair buyback prices of the Textbook Annex and felt that they were losing a lot of money if the edition of a book they had bought that semester will no longer be used," said Azar.

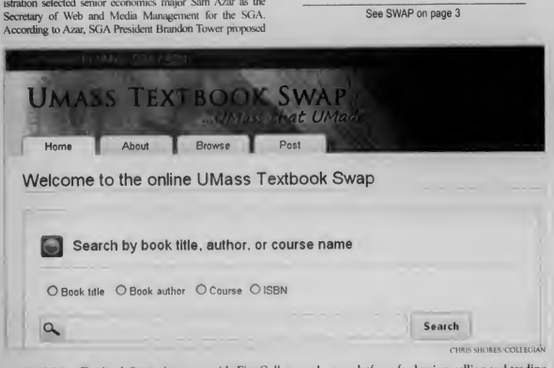
After establishing their executive board, the SGA reached out to UMass Computer Science Department Academic Chair Dr. Robert Moll. Moll suggested contacting ACM Club President Mario Barrenechea, who saw an opportunity for a partnership.

"Sam and I decided to approach this as a software engineering project, which is a long and grueling process of getting closer to your teammates, developing software, and going through formal requirements," said Barrenechea.

From that moment early last April, Azar became the SGA project manager and Barrenechea served as the project manager for the ACM. Holding meetings over the summer break, the project managers developed requirements for what the site would look like and held weekly phone meetings to ensure they stayed on track.

"We realized that we needed manpower – we needed developers and we pushed for hiring a team of developers," said Barrenechea.

See SWAP on page 3



CHRIS SHORES/COLLEGIAN

The UMass Textbook Swap aims to provide Five College students a platform for buying, selling and trading textbooks, rather than selling them back to bookstores for low returns.

Legal Services wants students to be aware of their legal rights

AMHERST POLICE DEPARTMENT

As spring "party season" approaches, the Amherst Police Department will likely be stepping up patrols across town, employing vehicles like this one for rounding up large groups of rowdy party-goers.

By Ashley Berger
Collegian Staff

As the weather warms and with the end of the academic year looming, it is safe to say everyone is starting to get a little bit of spring fever. Students sometimes tend to get a bit more rowdy at the culmination of the spring semester, and with a bit of sun-infused emboldening, students may find themselves coming into unwanted contact with police.

Corey M. Carvalho, the associate director at the University of Massachusetts Student Legal Services Office, said in a phone interview last week that his office wants to help students be prepared and informed in the event they find themselves scrutinized by a representative of the law.

Carvalho addressed the fact that the Amherst police know when major "party weekends" take place, and that they plan accordingly by adding patrols and checkpoints. Officers from the APD are spread across the community on such weekends and are primarily looking to ensure that peace is kept in Amherst and that laws are enforced.

"By living in a college town, you do not waive you right to live in a peaceful community, so students need to be respectful of those living in Amherst," explained Carvalho.

Carvalho presented a series of tips for students on how to handle interactions with police, specifically surrounding Fourth Amendment rights, noise violations and keg violations.

Students generally don't understand that unless the police have articulated they are detaining an individual, that individual is generally free to go, Carvalho said.

"If an officer stops you, politely ask if you are being detained or if you a free to go," he cautioned. "If he says that you are free to go, then he can ask you questions or you can just walk away," said Carvalho.

"Detaining someone has implications of the Fourth Amendment," he continued. "Police need reasonable suspicion in order to stop you, and they need enough probable cause to ask to search your backpack," said Carvalho of situations which may play out when students could hypothetically be transporting spirits.

Carvalho furthered discussed some rights students have but which they may be unaware of. In a situation where a student is carrying a backpack and a police officer asks what is in the bag and the student voluntarily tells or opens the bag, that is legally considered consent. If one doesn't have any contraband in one's backpack, it is in one's best interest to give consent.

"Don't lie," said Carvalho, which he said is a common mistake students make which can land them in further trouble.

"If an officer asks you to empty your pockets and you do, you have consented to a search. Consent can be interpreted by actions as well as stated verbally," Carvalho added.

Carvalho pointed out by adding that students can defuse potentially negative experiences by simply being friendly and amenable.

High Five Day gains legitimacy

By Sam Butterfield
Collegian Staff

If bewildering workloads and ongoing grey weather have you down, cheer up: Thursday is National High Five Day!

The San Francisco-based National High Five Project announced Monday that it will be sponsoring the tenth-annual National High Five Day Thursday, April 21 at high-five-facilitating locations everywhere, like in your classroom, the office, your dorm room, on the many paths littering campus, in Amherst center, and elsewhere. Anywhere is a suitable spot for high-fiving.

Beyond mere outward displays of friendship and positivity, the High Five Project is getting serious, marking its tenth anniversary by attempting to set 10 high five-based world records, including petitioning the United Nations for recognition and inaugurating a National High Five Day scholarship, according to National High Five Project spokesman Greg Harrell-Edge.

"To set our 10 high-five related world records, we're working with the Universal Records Database, which helps to verify and track goofy records," said 29-year-old Harrell-Edge, a San Francisco resident and co-founder of the project in the release.

The organizers of the project appear poised to meet their mark. They have already set world records for most high-fives during a successful half court basketball shot, highest high-five, shortest high-five and most half-court basketball shots missed consecutively while attempting to set a high-five world record, according to Monday's release.

Since its informal origins, the National High Five Project has grown by volumes. Thirty-three individuals have signed a TakingItGlobal.org online petition calling on UN Secretary General Ban-Ki Moon to officially recognize what would become International High Five Day.

"We, the citizens of the world, cry out in unison from every corner of the globe, our voices striking a perfect harmony with one simple demand: we call upon the United Nations to officially recognize Inter-National High Five Day," write the authors of the petition. "For too long we have been divided by our differences and forced to firmly grasp the hands of those who oppress us. This archaic gesture has roots in warfare, not jubilation."

"We're delighted that many tens of people are signing a petition to the United Nations Secretary-General Ban-Ki Moon, pleading with him to recognize National High Five Day," said co-founder Conor Lastowka, 29, of San Diego in the release.

According to the release, the accomplishment the Project's founders are most proud of is the establishment of a National High Five Day Scholarship Fund, which they set up by incorporating as a 501c(3) non-profit organization last July, according to the group's website, www.nationalhighfiveproject.org. The Project's Board of Directors will judge an essay contest to determine the first winner this summer, with proceeds from National High Five Day funding the award. To help fundraise, the release explains, NHFP's directors are sponsoring a drive on their website where would-be benefactors can donate $20 or more and have a message of their choice displayed on the project's site and receive a thank you phone call from one of the NHFP's directors.

"Despite all of that good work, we still intend to cap off the holiday by eating way too much cake, having a crazy sugar high, and staying up past our 10 p.m. bedtime," Harrell-Edge said in the release.

Sam Butterfield can be reached at sbutterfield@dailycollegian.com.

SLSO advises students on rights with police

RIGHTS from page 1

"While it is important to know your rights, sometimes it doesn't make sense to try to assert them. If an officer is just going to ask you to dump out a beer, just do it. Be polite."

Carvalho also noted one hinging point in police encounters: police cannot legally frisk detained individuals, he said, unless they believe they are armed.

"Police cannot pat you down unless you appear to be armed and dangerous, and the police have to articulate that. This kind of stop is called a Terry stop and is a two-part process. The police can stop you and question you, and then if you appear to be dangerous with a weapon or they feel threatened, they can then pat you down. Generally, holding a can of beer is not enough to articulate the need for a pat down," he said.

Amherst also strictly enforces open container violations, Carvalho said.

"An open container includes an open beer can, red Solo cups with alcohol in them, water bottles, and anything else alcohol can be consumed out of," he said. "If an officer stops you and you're in possession of any of these in a public area such as a street or sidewalk, you can either be arrested or summonsed to court," he continued.

He then pointed out another key distinction: if an individual is on private property, police cannot stop them for open container violations.

"If a police officer is standing on the street and you are on a private lawn and he asks you to come talk to him, make sure that you put down your open container before entering the public street or sidewalk," he advised.

Carvalho then moved to party situations, stating that police tend to make mass arrests at large gatherings in an attempt to quell such scenarios.

"In situations where there are large crowds of people, the police are more likely to arrest people rather than summons them in order to stop them at that moment from engaging in criminal activity," he said.

Police are also often prepared to issue an order of dispersal, Carvalho said. If a crowd fails to disperse after they make such a decree, everyone present is automatically in violation of the law.

Noise violations are another area of the town bylaws the Amherst police strictly enforce, Carvalho said. According to the town bylaws, it is unlawful for any person or groups of people to make, help, or to prolong excessive and unnecessary noise that others may find annoying or disturbing.

"If the police determine that there is a noise violation, anyone involved in making the noise can be arrested," Carvalho said. "If the police issue a nuisance house violation, the residents of that house can each be subject to a $300 fine."

In addition, police cannot enter a residence without a proper warrant, he said. However, there are multiple exceptions to the warrant rule.

"If you open the door to your home, whatever the police can see in plain view may allow them access to the home," Carvalho explained. "If there is a medical emergency or if someone who the police are in pursuit of enters a home, the police can enter that home."

As most students know, one basic ingredient for any successful house party is a large supply of alcohol, which sometimes comes in the form of a keg. The Town of Amherst requires that party-throwers obtain a keg license through the police department. If party organizers fail to secure a license and are caught with a keg on their premises, each individual who is a tenant in such residences can be subject to a $300 fine for each keg.

Carvalho concluded by boiling down the primary ways to survive an encounter with the police.

"Stay calm. Be polite. Assert your rights in an acceptable manner. Have fun, but try to avoid situations that will beg for police attention and intervention," he said.

Any student is welcome to contact the Student Legal Services Office with questions about any legal matter before or after problems arise.

Ashley Berger can be reached at aberger@student.umass.edu.

Text Swap aims to save students cash, hassle

SWAP from page 1

Last fall, Azar and Barrenechea decided to hire two permanent, paid project members. With the allocation of a small amount of funds of around $3,000 – a fraction of the cost that would be charged by professional developers - the managers interviewed job applicants, and hired senior computer science major Chris Childs as the developer, and freshman computer science major Matt Rheault as the Web designer.

Originally, Azar and Barrenechea planned to run the textbook swap through the UMass server, but after being told by UMass Office of Information Technology that this would not be possible, the developers decided to settle for a third party server, although they hope to be able to place it on the UMass server in the future.

"I'm hoping to see that this will go up on the UMass server, I think it is something the school could be proud of its students doing. I think it should be better publicized by the school," said Azar.

The network was delivered on time and is now accessible. Currently, the developers are actively promoting the website, publicizing it through flyers and a Facebook page. A demo night is expected to be scheduled shortly, where developer Childs will walk attendees through the site's functions.

"We're trying to get the word out there, we're a new site, we're not even a month old since the launch," added Azar. "It's been a long year, but now we are in the marketplace and now we are trying to get users. The value of the site depends on users. We have confidence because this is something the students asked for."

Throughout the process, both developing parties thoroughly bonded and look forward to further cooperation on future projects.

"It's been wonderful working with the SGA, and we hope to continue that relationship next year with the new officers," said Barrenechea.

Collegian File Photo

A new SGA-built textbook swap site aims to save students cash on texts, rather than forcing them to buy or rent.

Azar agreed, saying he hopes this energy and momentum will carry into the next year, even though most of the project's participants will be graduating. He's hoping that an idea for "a phone application that will better connect students with what's going on campus that is frequently updated" will be a project that can be pursued in the near future.

Azar and Rheault have also continued their cooperation beyond UMass and are currently co-designing litamherst.com for "Lit Nightclub," a future addition to downtown Amherst nightlife.

Dmitriy Shapiro can be reached at dshapir@student.umass.edu.

Extravagant ganja

Hannah Cohen Collegian

While a site like this may not be too out-of-the-ordinary for some Amherst residents, it became the norm for the community over the weekend, as Extravaganja brought pot pride to the Amherst Common.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

TUESDAY, APRIL 19, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

A party united

If there is anything that warms the heart of a devoted political science major, especially one active in the political realm, it is the great spectacle of party conventions and conferences.

Without a doubt, political parties are the epitome of political participation, incorporating everyone from normal voters and grassroots organizers and poll-checkers to state and federal party leaders.

Dan Stratford

This stimulation of participation elevates political parties to the realm of "great chains of being" of the body politic. This is not to say they are a monolithic Alpha and Omega of politics, but they aid greatly in linking together the myriad factors, issues and processes involved in elections and making the electoral process that much more efficient.

This alone is a testament to how much of a community-builder politics can be – it not only is a vehicle for advancing the people's business, but ensuring the continuity of that sometimes amorphous mass of "the people" itself.

This is why I was so excited to have the honor of attending the College Democrats of Massachusetts Convention at Boston College this past weekend. There is nothing more enjoyable, in the opinion of this writer, than traversing the corners of our great commonwealth with his compatriots from the Student Government Association and the University of Massachusetts Democrats, who often belong to both organizations. This alone is a testament to how much of a community-builder politics can be – it not only is a vehicle for advancing the people's business, but ensuring the continuity of that sometimes amorphous mass of "the people" itself.

Though there is a great temptation to use this column as a veritable wellspring of adulation for the Massachusetts Democratic Party, it would be in the better interest of the public to describe who was present there and the implications for the upcoming elections in 2012.

Though it is fashionable to speculate about whom the Democratic Party will field to challenge Scott Brown for his seat in the United States Senate, there was a plethora of viable candidates who could readily rise to the challenge, from Massachusetts Senator Ben Downing, to Alan Khazei, Bob Massie, and Mayor of Newton Setti Warren.

Khazei in particular stood out not just for his philosophical adherence to progressive causes, but for his involvement in acts of social entrepreneurship that prove his temporal commitment to them. Downing is always a welcome presence, and serves as a testament to the maturity and propensity towards deliberation that still flourishes in the Massachusetts State Senate.

He serves as the honorary chairman of College Democrats of Massachusetts, a position previously held by the late Edward Kennedy. In my humble opinion Downing has been one of the most fervent and determined advocates for Western Massachusetts in that most august body.

The presence of these great personalities was certainly welcome, especially considering the precarious balance of power in the federal Senate and the equally precarious federal budget situation. This is a resounding example of why party conferences and conventions such as that at Boston College, even on the university level, are such an important instrument in the management of our great republic – they allow the convergence of the elected, candidates for election and the most devoted portion of their electors in the same place.

However, one of the most moving speakers of that storied weekend was Ayanna Pressley, one of four at-large councilors of the Boston City Council, and the first black woman elected to that position. Her biography of rapid advancement through the ranks of American society, from the tribulation of poverty to the position of at-large city councilor, is inspiring, and a fitting example to all who seek elected office. What was particularly outstanding about Pressley's address on Sunday was her commitment to the sanctity of the legislature – the idea of governing in the best interest of the people rather than by the people's opinion alone, imperceptive and imperfectly informed as it may be.

Though some may decry this principle as radically authoritarian, with conventional wisdom being that the role of the legislator is to act as a mere tool of their constituents, it in reality harkens back to the very birth of modern conservatism under Anglo-Irish Member of Parliament and political philosopher Edmund Burke. Burke enumerated in a speech to his constituents in Bristol, England in 1774, that, despite the fact that he as their representative ought to "...live in the strictest union, the closest correspondence, and the most unreserved communication..." with their constituents, he also owed his constituents "... not only his industry, but also his judgment; and he [would] betray, instead of serving you, if he sacrifices it to your opinion."

It is ironic that this bedrock principle of classical conservatism – which the author of this column greatly respects and meticulously studies, despite his progressive sympathies – has faded so far into the channels of political thought that a thoroughly progressive Democrat from Boston has come to identify it as one of her own. This should not be perceived as devious or straying from the message of the Democratic Party. In fact, from talking with my fellow delegates at the convention, it seemed to be right on par with our party's message – that our nation is, at heart, a civic-mined republic, with popular participation necessary for purposes of legitimacy, but with government serving as the enlightened standard-bearers of the people. In this sense, the truest irony is that modern Democrats are the real little "r" republicans in the American body politic, especially among our generation.

The convention served as a similar entity, though perhaps somewhat detached from the tendencies of a civic republic, being a strictly intra-party organization. However, the principle behind the convention remained the same – that political parties unite generations of activists. They are incubators of political leadership on both sides of the spectrum. However, as made evident by Pressley's partial resurrection of the philosophy of Burke, it, in the opinion of the author, sometimes just takes a Democrat to pragmatically govern.

Not excited about Obama's reelection

Several weeks ago, President Barack Obama officially announced he will run for reelection in 2012. Though I was a staunch Obama supporter in 2008, when I heard the news this time I was not particularly excited.

President Obama has lost much of his appeal to the young voters who played such a major role in electing him in 2008. For voters ages 18-29, he had an advantage of 66 percent to John McCain's 31 percent, according to a Pew Research Center survey. Young people were drawn to his message of change and hope, and saw his potential as a transformational president.

Tim Cheplick

If Gallup asked me if I approved of President Obama's performance, I would still say "yes." He has pushed through some of the most important legislation since Franklin Delano Roosevelt, like health care and financial reform, even if the incarnations in which they came were not ideal. He's invested unprecedented amounts of money in renewable energy research, loans and grants. He's officially ended the war in Iraq and pulled out almost 100,000 troops since he took office.

So why am I not terribly excited about President Obama's reelection bid?

Obama has not been as fearless as a president as he was a candidate. Health care reform has several noteworthy provisions, like insurance companies no longer being allowed to deny coverage to persons with preexisting conditions, an expansion of Medicaid, and the ability to stay on parental insurance plans until the age of 26.

Obama has not been as fearless as a president as he was a candidate.

But I would have liked to see the public option included, if not a single-payer system like the method employed in the United Kingdom, Sweden and Canada. This is evidenced by poll data from the same Pew survey showing 69 percent of young people think government should do more to solve problems. Instead, the government handed health insurance companies an extra 30 million customers by requiring all citizens to buy insurance.

A particularly disappointing facet of Obama's presidency has been his stance on taxes. It is a little-known fact that income tax cuts were included in the stimulus act, at a value of $800 per year for a married couple. This cut cost $116 billion in a time when everyone is scrambling to cut the deficit. The Bush-era tax cuts which included cuts for the wealthiest top one percent, cost $858 billion.

In a time when the poor and middle class are feeling the economic collapse and resulting budget cuts the hardest, an extension of tax cuts for the wealthy is simply unfair. I think the youth vote would have liked to see Obama fight harder on these grounds.

Obama's stance on the wars has both pleased and displeased me. As mentioned, bringing home nearly 100,000 troops from Iraq is good news. But he has allowed the war in Afghanistan to escalate and has brought the number of troops there from 35,000 at the start of his presidency to 100,000 today, though a withdrawal is planned for this July.

When Obama first became president, he signed an executive order to close the Guantanamo Bay detention facility within one year. At Gitmo, hundreds of suspected terrorists have been kept indefinitely, and there have been allegations of torture by U.S. forces. The human rights watchdog group Amnesty International has called it a "human rights scandal." Obama has since reversed his policy and has signed a new executive order resuming military trials for the detainees. Tom Parker of Amnesty International said, "It's very clear he is not prepared to make the tough decisions it would require to close it." This is disappointing for those of us who believed Obama would uphold America's moral standing in the world.

When Obama was elected, many of us thought a new era of transparency might be ushered in. Instead, he has gone back on his promise to allow five days of public comment before signing bills.

More significantly, Obama extended the Patriot Act without reforms. The Patriot Act has been attacked on the grounds that it violates the First and Fourth Amendments because it allows U.S. agents to collect and examine business records and to track individuals who aren't even tied to terrorist organizations.

But one of the biggest and most important failures of Obama's presidency has been the death of climate change legislation. A bill including cap-and-trade, where a roof on carbon dioxide emissions is set and polluters trade the "right to pollute" under it, was passed in the House of Representatives but could not get a sufficient number of votes in the Senate. The president did not play a big enough role in those debates.

Climate change is happening whether Republicans believe it is or not. I would have liked to see Obama give America a science lesson and also elaborate on the other ways a cap-and-trade bill is a good idea.

For instance, the Congressional Budget Office reported that it would have reduced the deficit by $24 billion. It could have also been a generator of new, green jobs. Already, more people are employed by the wind industry – 85,000 – than coal, yet wind only meets two percent of our electricity needs.

Having taken note of Obama's biggest failures as commander-in-chief, I wouldn't want to give the mistaken impression that I believe our president hasn't had some huge successes as well. Even though the health care and financial reform bills were weaker than Obama's supporters would have liked, they were still some of the most progressive legislation in decades.

The repeal of the Don't Ask Don't Tell policy barring homosexuals from serving in the military is a big win for civil liberties. There were also unprecedented levels of investment in renewable energy research and general infrastructure.

The President's leadership at times has been extraordinary, and he still has time to make right on some of his promises. But failing to adequately address major issues like escalating wars, climate change, transparency, economic inequality and America's moral standing with regards to torture has made many of his most vocal supporters in 2008, especially us young folks, feel let down. Hardly anyone knows how hard it is to be president of the United States, and we know that it isn't all Obama's fault. Obstructionist Republicans and the logjam in Congress might be the bigger issues. But it will be hard for Mr. Obama to energize his base for 2012 with these policy shortcomings.

Tim Cheplick is a Collegian contributor. He can be reached at tcheplic@student.umass.edu.

Intimate spring show

Dan Gigliotti
Collegian Staff

Sunday's Spring Concert, hosted by the University Programming Council, did not attract as many attendees as in the past and, with a half-empty arena, there was no hiding the evidence.

For those who did attend, co-headliners Pretty Lights, B.o.B and 3Oh!3 had no shortage of enthusiasm, performing in what was a long night of differing musical talents that began with a pair of the University of Massachusetts' own musical acts.

Promptly at six o'clock, Kids on a Hill, winners of the Battle of the Bands contest run by the UPC, took the Mullins Center stage to a sparse crowd. On the biggest platform the funky collective has played to date, the group performed perhaps its briefest set.

Front-man Chris Kazarian crooned comfortably, sporting an uncontrollable afro and a dark-colored blazer. At times, his band mates, particularly Ben Silverman, grinned at the band's sound. as Kids on the Hill were unaccustomed to playing with such a massive sound system.

The group received its biggest cheers during the song "Monster Boogie," a clever twist on the classic Kool and the Gang song "Jungle Boogie," as vocalist Madeleine Maggio vigorously ripped a verse from Nicki Minaj's rhyme book.

Four songs and 15 minutes later, the group bowed off-stage, begging the question, "What's the rush?" from the few fans in attendance.

In place of Kids on a Hill came fellow UMass product, DJ Desert Storm, winner of the UPC's DJ Wars contest, who spent plenty of time spinning beats during the night. While doing his best to get the minimal crowd hyped up, the short-in-stature deejay, Hasan Zaidi, looked especially lonely in the front corner of the stage.

He managed to get a rise out of the crowd with a hyper-rendition of "The Fresh Prince of Bel-Air" theme song that he followed with a bass-heavy remix of Michael Jackson's "Thriller"

At seven o'clock, the Colorado duo 3Oh!3 claimed the stage with as much enthusiasm as a high school cheerleading squad. Accompanied by a drummer, keyboardist and guitarist, Nathaniel Motte entered stage right donning a leather coat and a white towel on his head gesturing the band's signature hand symbol, which looks like a tired imitation of wrestler Diamond Dallas Page's Diamond Cutter or rapper Jay-Z's Rocawear symbol.

Motte's partner, Sean Foreman, led the group in its first song "Starstrukk" in a fit of energy that could only be had after chugging a pint of 5-hour ENERGY drink. The song "Touchin' on My" followed with the intensity of a heavy metal/thrasher band and the lyrical qualities of a third-grade chorus.

3Oh!3's part in the song "My First Kiss" (which features Ke$ha) got the collective hands of the crowd in the air. Continuing with "Don't Dance," "Rich Man," and "We are Young," it appeared that Foreman felt a come-down from his energy supplements.

About 30 minutes into the set, Foreman began a lackadaisical chant about partying, segueing into the song "House Party" off of the 2010 album, "Streets of Gold."

If there were a frat row on Sesame Street, 3Oh!3 would be a staple at every mixer as it decreed that the crowd say "F**k the Djs... F**k the clubs" and throw a house party, using lyrics that made Rebecca Black look like a wordsmith.

As if the UMass contingency needed any more encouragement to lose their inhibitions, they responded agreeably with the group's sentiments and cheered along.

The songs "Streets of Gold" and "Double Vision" closed the set, but not before offering some unpleasant melodies. 3Oh!3 excited after about 45 minutes, wherein the Mullins Center floor and surrounding seats were still scarcely attended.

DJ Desert Storm filled in another 45-minute hiatus before B.o.B strode onstage. Wearing a Led Zeppelin t-shirt and jeans, the bling-less hip-hop artist began his first song unassumingly, without theatrics.

Then, as the track "Higher" continued on, so too did B.o.B's energy, bouncing back and forth on stage while maintaining his fastidious flow through the song "Batman Flow."

Co-headliner B.o.B performed to a rather sparse crowd at the Mullins Center last Sunday for the annual Spring Concert. Also performing were 3Oh!3 and Pretty Lights.

During his part of the T.I. hit, "On Top of the World," B.o.B, also known as Bobby Ray, leapt offstage and mingled with the fans front and center. Continuing with "Haterz Everywhere," he found footing in the guard rail partitioning the crowd from the stage and entangled himself in the "a" section of excited fans, taking the hat off of one male spectator and using it as his own.

The 22-year-old B.o.B rapped with as much fervor as a grade school student at recess and as animatedly as a character from the Looney Tunes.

He played a relaxed version of "Past My Shades," which was followed by his wingman, Playboy Tre, calling out to audience members to put their fists in the air before playing the song "Magic."

Then Bobby Ray politely asked permission to play guitar; the crowd obliged. He sang with good control on the songs "Don't Let Me Fall" and "Satellite," urging everyone to put their lighters and cell phones in the air.

After the song "Nothin' on You," Bobby Ray and his back-up band showed their limitations during a generic cover of the MGMT song "Kids."

Then, B.o.B abruptly left stage without warning. Two minutes later, he came back out as suddenly as he left to the tune of his hit single "Airplanes" and the song "Voltage," which samples the Led Zeppelin tune "Trampled Under Foot."

He left stage for good at 9:40 p.m., making way for the solo DJ act, Pretty Lights 30 minutes later.

With a remix to the Chicago Bulls theme music of the mid-90s, Derek Smith Vincent took to his podium with two laptops and his typical New Era fitted cap bent to one side and began mixing a collection of familiar samples into a psychedelic string of electronic beats.

A colorful display of lights flickered in the front of his stand and on a symmetrical row of towers standing in the backdrop. Without words, the Colorado-based deejay cued his original mixes with intensity.

Not until 15 minutes into the set did Smith Vincent utter a word, simply urging everyone to make some noise before introducing a track that sampled Steve Miller Band's "Fly Like an Eagle." Clocks rang and bells chimed in opening to a remix of the Pink Floyd song "Time," which was so similar to the original that it's a wonder how he manages to perform it without risking copyright infringement.

Pretty Lights' music was played at such a piercingly loud decibel it was almost distressing to those unfamiliar with his live shows.

Smith thanked the UMass fans before playing "High School Art Class" off of his newest album "Spilling Over Every Side." He lurched over his podium, adding effects from his soundboard while gesticulating in different parts to emphasize the climaxing of his lengthy synthetic tracks.

A remix of "All of the Lights" received some positive reaction, but the crowd really yelped when "Finally Moving" was queued. Fans joined in during the chorus of sampled lyrics, indicating that they were still feeling good about his performance.

Smith Vincent began playing his spin on "Empire State of Mind," mashed up with the rhymes of Notorious B.I.G.'s [illegible]. But Smith said, "I f**k halted it midway to [illegible] mix of Jay-Z's "DO

Altogether, Pretty [illegible] played for well over [illegible] a half, concluding the [illegible]

For what was sure[illegible] pointing turn out in [illegible] to UMass' past Spring [illegible] the artists were unable [illegible] combined to put on [illegible] night of performance [illegible] the lack of spectators [illegible] prevented the show from [illegible] ing its true potential.

Dan Gigliotti can be [illegible] dgigliot@student.umass.edu.

3Oh!3 took the stage at U[illegible] Spring Concert this past Sunday.

Andelloux teaches fun, safe sex

By Kate Evans
Collegian Staff

Both male and female University of Massachusetts students gathered last Tuesday to learn about taboo sexual fantasies, picking the right toy and bedroom safety as VOX and board-certified sexologist Megan Andelloux brought the Sex Study: College Tour to the Cape Cod Lounge.

Andelloux, otherwise known as Oh Megan!, looked like a walking contradiction, wearing glasses, pearls, a pretty pale blue wrap dress and sleeve tattoos.

The sexologist specializes in "how to keep things fun and frisky while you're playing," said Andelloux of her craft.

She has been studying sex for 13 years, but studied marine biology in college. Since her change of heart, Andelloux has worked at Planned Parenthood. She currently works as a gynecological teaching associate and runs a sexual resource center in Rhode Island.

Met with confused expressions, Andelloux explained that a gynecological teaching associate means she acts as a "portable vagina that gives feedback to medical students."

Andelloux goes through 30 gynecological exams a week to make future exams better for women. She then passes around a speculum while assuring students the device is "not creepy." A speculum, also referred to as duck lips, is the metal medical instrument used in gynecological exams.

Andelloux kicked off the workshop by discussing sexual risks and assessment.

The first risk approached was abstinence, to which an on-the-spot cell phone poll declared that everyone in the room had different definitions of the method.

However, the clinical definition is "no oral, anal or vaginal sex," informed Andelloux.

Abstinence is risky because although the practice is taught to be 100 percent effective with perfect use, with "human use" it is only 75 percent effective. The safety drop is in accordance with the fact that sex is not always planned – sometimes it just happens.

Andelloux then discussed fantasies, enlightening that they are a great way to live vicariously through a sexual urge. The most common of the desires are the "non-consensual" and slapping fantasies.

People often feel guilty about both. Andelloux rationalized with, "We have enough baggage that we carry without putting our politics into our sexual behavior."

A sexual ego risk is that people often want to talk dirty but have no idea where to start. Andelloux told students to simply say what you feel, what you want to feel, or describe something that sounds fun.

"People want to feel appreciated and (a sext) is a way to make you feel appreciated," said the sexologist of dirty texting.

To sum up the risk factor section, Andelloux listed and discussed what she called "the Continuum" of sex.

The lowest risk act on the continuum is oral sex because the germs in the mouth will kill almost anything. The most common risk from engaging in oral sex, however, is herpes. Andelloux clarified a common misconception that cold sores and fever blisters are simply a socially appropriate way of saying herpes.

There are two types of this virus: Simplex 1 is oral, and Simplex 2 is genital. The most common time to contract herpes is just before an outbreak.

The initial virus outbreak is easy to identify because it causes flu-like symptoms and the lesions are intense.

Andelloux freaked the audience out, sharing that "by the time we're 50, 50 percent of the population will have Herpes Simplex 2."

Vaginal sex is gauged as medium risk on the sexual play continuum. When sperm enters the vagina, 50 percent is automatically killed. Despite this fact, the vagina is extremely sensitive to irritation and infection.

Glycerin-based lubricants trigger yeast infections, and "oil-based lubes will make vaginas freak out," said the sexologist.

The highest risk sex act on the continuum is anything related to the anal region because the tissue is thinner and more likely to tear. Andelloux informed the crowd that oral to anal contact transmits bacteria, so it's important to wash the anal area before engaging in play.

After wiping her hands clean of the risks, Andelloux went straight to the fun part by showing students how to put a condom on using only her mouth. Calling up a volunteer to wear a strap-on, she then demonstrated the trick in one fell swoop as viewers in the back stood on their seats to get a better view.

A perfect transition into condom-talk, Andelloux informed shocked attendees that colored condoms are actually safer than those with flesh-tones. With the brighter colors it is easier to make sure the condom has not ripped and is still on properly.

"Colored condoms are more fun, you can coordinate with any holiday," said Andelloux.

Flavored condoms, on the other hand, tend to break more easily due to their thinner design, which is designed for oral pleasure.

While passing around some toys, students learned that the U.S. does not regulate sex toys because the sale of them is still illegal in states like Alabama. Therefore, certain toys are unsafe because of unsafe chemicals and plastics. To test a toy, leave it on a wooden table overnight. If there is a stain on the table in the morning, toss the toy. Andelloux shared a rule of thumb: sex shops that allow holding and touching of the toys before purchase generally carry safe products.

Aiming to spread pleasurable fun, the sexologist shared that only 20 percent of women can reach orgasms from vaginal sex alone, and the vast percentage that cannot need clitoral stimulation. Andelloux described the hood of the clitoris as the best place to stimulate because it is not as sensitive as the clitoris itself, yet still packs pleasure.

After showing students a video of what female ejaculation looks like, Andelloux finished the night off by discussing anal play.

"On average, people wait 2-3 days before going to the ER with toys lost up their butts," recited Andelloux. This fact was met with laughter as she discussed the male prostate, otherwise known as a man's g-spot.

Andelloux shared that stimulating the prostate gives men full-body orgasms as opposed to genital orgasms.

"Usually when men get prostate orgasms they don't want to go back," said Andelloux. She ended the night telling students that the most common sexual activity among gay men is oral sex, despite the myth that anal sex is most common.

The only disappointment of the workshop was that students did not get to take home vibrators as party favors. Free vibrators were advertised on the event's Facebook page, but it was a miscommunication of sorts. Students did, however, take home free condoms, lube samples and a Tenga egg. The egg is generally a masturbatory tool for males, but Andelloux shared that it can also be used for females as a new surface for sex toys. The event ran an hour overtime, and lively students left with their goodies by 10 p.m.

Kate Evans can be reached at kvevans@student.umass.edu.

'Conspirator' dull, but accurate

By Kevin Romani
Collegian Correspondent

The title of Robert Redford's newest film, "The Conspirator," suggests it is a suspenseful political thriller. Instead, he directs a painfully slow film that lacks any real drama. It seems that the story would have been a better fit for the stage than the big screen.

"The Conspirator" begins on the night of President Abraham Lincoln's assassination. The opening minutes quickly depict that night's events, identifying John Wilkes Booth immediately as the president's direct murderer. However, it was clear Booth was not the only man involved in the plot that sought to kill Lincoln, Vice President Andrew Johnson and Secretary of State William Seward. Three other men were identified as co-conspirators as well as one southern woman, Mary Surratt (Robin Wright), whose story becomes the film's focal point.

Surratt, whose son is one of the conspirators, is accused of fully knowing the conspirators' plots for assassination and housing them. A senator from Maryland, Reverdy Johnson (Tom Wilkinson), initially takes up Surratt's case. Knowing he had no chance to give a southerner a fair trial (Maryland was a border state during the Civil War that did not secede but remained a slave state), he turned to a Union Captain to defend Mary. Frederick Aiken (James McAvoy) regrettably takes the case, and struggles with defending a woman the country wants dead for her supposed role in the Lincoln assassination.

"The Conspirator" is full of fine performances, especially from its two lead roles. McAvoy's American accent is flawless, and he is extremely convincing as the Union captain who returns to his position as a lawyer following the war. The audience can feel his frustration with Mary, who he at first believes to be lying – he wants her dead just like the rest of the country. Wright is compassionate and captivating in her scenes. She steals every moment of screen time with her persuasiveness as a loving mother and lonesome widow who sees the inevitability of her death at the hands of the subjective viewing jury.

Several established actors make fine contributions to smaller roles in the film. Kevin Kline plays Secretary of Defense Edwin Stanton, and is unrecognizable as a man filled with hate towards those who killed the beloved president. Stephen Root provides small portions of much-needed comic relief to the film as a witness to the prosecution. The always-excellent Wilkinson also does a great job with the little screen time he is given.

Most of the casting and acting was [illegible] this film. There were a few poor casting [illegible] and several moments of contemporary dialogue that made for some anachronistic moments. James Lance, known more for his comedic work, plays a [illegible] of Frederick's. Alexis Bledel, who is also known for work in other genres (mainly films and series dedicated to teenage girls), plays Frederick's love interest Sarah Weston. Both are talented actors, but [illegible] wrong and out of place in this film. It did not help that these characters in particular had lines that fit [illegible] a new "Transformers," movie than a historical drama set in the 1800s.

The biggest problem with "The Conspirator" is the pacing. There are few thrills and little excitement to carry the picture. It relies far too much on its acting. With a title like "The Conspirator," the audience may be expecting just that: a little conspiracy. There were no twists or turns, just a straightforward and bland narrative that mostly takes place in a courtroom. If there is one thing a successful courtroom drama needs, it is energy. This film has none of it. Unfortunately, it seems Redford was far more interested in making a film that is desperate to make connections to the post-Sept. 11 actions our government took, particularly those involving terrorists sent to Guantanamo Bay. Redford should have put his politics aside to make a film that offered more engaging drama.

Overall, the story of "The Conspirator" is a strong one. It deals with the issues lawyers face when force fed to defend something that goes against their principles, or situations they believe is guilty. Additionally, the film depicts what can happen to a nation that is so bloodthirsty for revenge it forgets its own foundations and morals. It is a story that would play better on the stage. Its slow pace, style, courtroom setting and rich characters are all certain attributes of a strong play.

"The Conspirator" is the first release of [illegible] formed production company simply known as "[illegible] American Film Company." The company is [illegible] on the belief that real life is often more compelling than fiction," and they assure, "that each production remains true to the history from which it is drawn." In this regard, "The Conspirator" succeeds. The film is incredibly historically accurate to the events depicted. They may be correct in their belief, however, that real life is more compelling than fiction.

Slugfests prominent in UM's 2-2 weekend

By Eric Mansfield
Collegian Staff

UMass	14, 9, 25
Temple	2, 10, 10
UMass	3
UConn	18

The Massachusetts baseball team had mixed results during the long weekend's stretch of four games in four days as the Minutemen scored a lot and were scored on a lot en route to a 2-2 weekend.

The Minutemen (11-16, 5-4 A-10) took two-of-three from Temple, (16-16, 3-9 A-10) who came into the series having lost their previous four games.

Friday's matchup was a rout, as the Minutemen pounded out 15 hits, defeating the Owls 14-2. Glen Misho earned the victory on the hill, tossing his second complete game of the season. The junior right hander gave up two runs on ten hits, while striking out two and walking none.

UMass head coach Mike Stone said that he thought Misho was outstanding and that he commanded the strike zone and did a good job of keeping the Temple hitters off-balance.

The Minutemen wasted no time in producing runs, as Matt Gedman knocked in Anthony Serino with an RBI single in the top half of the first. UMass would tack on another run in the fourth after Peter Copa singled and scored on an error by the Owl's shortstop. The Minutemen went up 5-1 in the sixth after Serino drove in three runs with a double to left field.

UMass broke the game open in the seventh inning, scoring six runs on four hits to increase its lead to 11-1.

The Minutemen added three more runs to their total in the ninth after a two-run home run by Copa and an RBI single by Kyle Multner.

The Owls rebounded on Saturday, defeating the Minutemen, 10-9, in 10 innings. The game, which had to be suspended Saturday, was finished on Sunday.

Pacing the Minutemen lineup was Gedman, who finished with four hits and three RBIs.

Taking the loss was Leif Sorenson, who came in to relieve starter Robert Machado. Sorenson went 3.1 innings, giving up four runs on four hits while striking out three and walking one.

Temple walked off with the victory after Adrian Perez knocked in Cameron Green for the game-winning run on a single up the middle.

The final game of the series saw the Minutemen plate 25 runs in a 25-10 victory. The run total was the highest for the Minutemen in an Atlantic 10 game in school history. Stone said that he was glad that his team was hitting the ball well because he knew going in that Temple would be able to score a lot, as well. As of Monday, Temple led the nation in team batting average at .347.

The Minutemen scored in every inning and every starter had at least two hits. Eight of the nine starters had at least two RBIs.

Leading the way for UMass was Tom Conley, who finished with four hits and four RBIs. Eric Fredette went 3-5 with four RBIs and two runs scored. Copa also had three hits and four RBIs.

Monday's matchup with Connecticut (22-12-1) was the opposite for UMass as UConn scored early and often, defeating the Minutemen 18-3.

UConn's LJ Mazzilli and Ryan Fuller each finished the game going 3-4 with an RBI.

The Huskies scored in each of the first five innings, plating four runs three different times.

Taking the loss for the Minutemen was starter Joe Popielarczyk who lasted an inning and a third, giving up eight runs on seven hits while walking one with no strikeouts.

Popielarczyk was then replaced by Ron Wallace, who was unable to quiet the UConn bats. Wallace pitched 3.2 innings, giving up nine runs on 11 hits while walking two and striking out two.

Coach Stone said that UConn had better pitching than they had seen over the weekend and that falling behind so much, so early had a noticeable impact on the team's mental state.

"Once we got behind, I don't think we locked in as much as we probably should have mentally and lost a little focus," Stone said.

Stone added that he told the team they needed to believe in a comeback.

"I just reminded them, I said we've done it before, we've scored a lot of runs. We got to believe. You can't give up mentally," Stone said.

One positive note for UMass was that Matt Gedman extended his hitting streak to a career long 15 games.

Next up for the Minutemen will be Tuesday's game in New Britain, Conn. against Central Connecticut (17-13-1) at 3 p.m. The Blue Devils just had a seven-game winning streak snapped by Fairfield on Sunday.

Junior defender Ali Houlis controls the ball in the Minutewomen's game against George Washington on Friday. Houlis has started in all 15 games, winning a team-leading 30 ground balls.

Carta's grand slam in the third lifts Minutewomen to 9-1 victory

SOFTBALL from page 8

had one home run to her name this year after hitting 13 all last year.

"She's been struggling," said Sortino. "She's been working very hard this last week and trying to iron out her mechanical flaws. She felt better coming into the weekend and obviously it's paying off. She's definitely swinging a better bat for us."

Sortino knows that the team is counting on her veteran catcher to provide the example for the number of young players on the team.

"She's one of our returning starters, one of very few, and it's really important that she be able to make contributions to the team offensively," said Sortino. "Obviously, she's done very well defensively. The best play of [Saturday's] game was when she threw out a runner to end the game. I thought that was fantastic. She's a great catcher and it's nice to see her coming back alive offensively."

Carta is now batting .237 for the season with two home runs and 17 runs batted in.

Soon after Carta crossed the plate, Stephanie Mayne launched the next pitch over the wall for the second of back-to-back homers, capping the five-run third and putting UMass up 5-1.

The Minutewomen added three more runs in the sixth, helped by a passed ball and an error by the Flyers defense.

Cyndil Matthew went 3-for-4 and drove in two runs, one in the sixth and seventh innings. Lindsey Webster also had a multi-hit game, going 2-for-4 with a run scored and an RBI.

The win was the eighth in a row for UMass, a streak that began on March 30 with a doubleheader sweep of Dartmouth. The streak also offsets a tough eight-game slide the Minutewomen suffered from Feb. 20 to March 4.

UMass will now travel to Connecticut for a Wednesday matchup before coming home for an 11-game homestand that will run for two weeks and feature seven different visiting teams.

Smith lifts UMass to 11-10 overtime win

By Stephen Sellner
Collegian Staff

UMass	11
Drexel	10

Kyle Smith has done it again.

The sophomore attack scored the game-winner for the second consecutive week to propel the No. 15 Massachusetts men's lacrosse team past Drexel, 11-10, in triple overtime at Garber Field on Saturday.

Will Manny fed Smith on a back-door cut in front of the net, who fought off the Dragon (6-6, 2-3 Colonial Athletic Association) defense and scored as he was falling to the ground with 2:37 remaining in the third overtime. The goal sent the Minutemen and the crowd into a frenzy as the team stormed the field to pile on top of Smith.

His goal followed up his performance last Saturday, when he netted an overtime goal against Towson to lift the Minutemen (8-3, 3-1 Colonial Athletic Association) to a 9-8 victory on April 9.

"For it to happen once, it would be a one-time thing, but now I'm confident going into overtime that I can score," said Smith in a UMassAthletics.com interview.

The goal capped an electric comeback as UMass trailed by four goals late in the third quarter but were able to knot the score at 10 to force overtime.

"This is the part of the season where it's a must-win and we're proving right now that even if we're down, we might bend but we're not [going to] break," said Manny, who led the team with three goals and three assists on the afternoon. "We're [going to] come right back at you and it's a very special thing. Going into Hofstra next week, it's [going to] be a great feeling."

The teams were neck-and-neck throughout the first half, exchanging scores with UMass on top, 5-4, at the break. The Dragons came out of half-time firing on all cylinders, scoring the first five goals after the break.

The game was the Minutemen's longest since March 30, 1988, when the Minutemen beat Cornell, 8-7, in Ithica, N.Y., in Coach Greg Cannella's senior year.

Drexel held a 10-6 lead as the final seconds ticked away in the third quarter, but the Minutemen caught a fortunate spark to swing the momentum back in their favor.

With less than 10 seconds remaining in the period, UMass' Mike Wilus intercepted a clearing attempt and rifled the ball towards the net. The ball took a fortunate bounce towards Manny, who put it past goalkeeper Mark Manos as time expired to cut the deficit to 10-7. The referees met and confirmed the goal, leaving the Dragons in shock as the period came to an end.

"That's a huge goal," said Cannella. "...That gives your team hope, that gives your team the confidence [it needs] to move forward."

The Minutemen followed the circus goal with three unanswered scores in the fourth to force overtime, including Manny's third goal of the game to cap the comeback with 3:46 remaining in regulation.

Colin Fleming, Anthony Biscardi and Smith each had a pair of goals on the day for UMass. The Dragons were lead by Kyle Bergman's three goals, while leading scorer Scott Perri was held to just one.

The Maroon and White remained in striking distance thanks to key stops by goalkeeper Tim McCormack and the entire defensive unit.

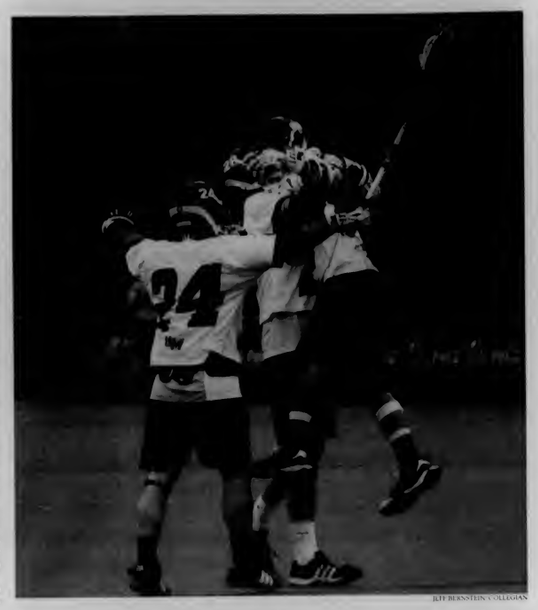
"I thought [McCormack and the defense] were great all day," said Cannella. "...Once they got their 10th [goal], that was a long stretch [of stops and] they didn't score again in the game and that enabled us to come back."

The Minutemen had a chance to win it in the final seconds of regulation. After Ryan Hollenbaugh caused a Drexel turnover, he passed the ball ahead to Bobby Tyler. The sophomore sprinted into the offensive zone and found Art Kell, whose turn-around shot bounced off the post, just missing the game-winning score.

Drexel had a chance in the final seconds of the second overtime period to grab the win when Scott Perri tried a turnaround shot from the left wing, but UMass' Jake Smith stood tall and disrupted the shot, which was secured by McCormack to force a third overtime.

UMass will be riding its three-game winning streak into Saturday's matchup with No. 7 Hofstra at a neutral site in East Hartford, Conn. at 3 p.m.

Stephen Sellner can be reached at ssellner@student.umass.edu.



JEFF BERNSTEIN/COLLEGIAN

Women's lax clinches Atlantic 10 title with victories over GW and Richmond

By Jackson Alexander
Collegian Staff

UMass	21
GW	6
UMass	21
GW	6

For the second straight week, the No. 15 Massachusetts women's lacrosse team won a pair of Atlantic 10 games over the weekend as the Minutewomen took down both George Washington and Richmond to seal the A-10 regular season title.

This means that UMass (13-2, 6-0 A-10) has clinched the No. 1 seed for A-10 tournament, which begins in two weeks.

On Sunday, a trio of UMass seniors featuring Jackie Lyons, Nazy Kerr and Haley Smith celebrated their senior day by anchoring a 14-4 victory over Richmond.

Attackers Smith and Lyons contributed offensively as they teamed up to score the first three goals of the game for the Minutewomen. Lyons finished the game with two goals and two assists, while Smith also chipped in a pair of goals.

Meanwhile, Kerr, the lone senior on defense, anchored a defense that allowed just four goals, a total that tied a season-low for the team.

"I have to give huge props to our defense today, our defense played outstanding," said head coach Angela McMahon. "That was the best performance from our defense the whole season."

The Minutewomen limited the Spiders to just four first half shots. Richmond didn't attempt a shot until less than seven minutes remained in the first half.

"I'm just really impressed with our defense," said McMahon. "[From] top to bottom, their aggression, coming up with loose balls, and really denying them any good opportunities in front of the net."

UMass, as usual, started off hot and strung together a barrage of goals to take a 4-0 lead just ten minutes into the game. This forced Richmond coach Stephy Samaras Mantziaras to call a timeout and settle her rattled team. But the Spiders were unable to weather the storm as UMass went on to score four more goals and extend their lead to 8.

Richmond's Gabi Wiegand finally scored the team's first goal of the game nearly 24 minutes into the contest. The Minutewomen took any momentum gained by the Spiders when they scored three straight goals, making the halftime score 11-1.

With a large lead and the game seemingly out of reach, the Minutewomen slowed the pace to a crawl in the second half. Neither team could find an offensive rhythm until Richmond finally put together a 3-0 run, but it was too little too late as UMass cruised to an easy victory.

Lyons, Smith, Dayna Deffiese and Katie Ferris had two goals each and paced a balanced attack that saw 10 different Minutewomen score.

"We still have a lot of different scorers every game, and that's going to help us going forward in terms of being dynamic, and not one person can by shut down because we can still score," said McMahon.

UMass goalkeeper Katie Florence logged her 13th win of the season, allowing just four goals, and making seven saves in the cage.

Richmond looked uncomfortable on offense without their All-American midfielder Mary Flowers, who was sidelined due to an injury.

Caitlin Fifield, who scored two goals, was the only Spider with a multi-goal game.

Despite allowing 14 goals, Richmond goalie Victoria Roebuck played a solid game in net, stopping ten shots.

On Friday, the Minutewomen used a gigantic offensive first half to overpower George Washington, 21-6.

UMass outscored the Colonials, 15-3, in the first half and dominated the game in all facets.

Lyons had three goals and two assists en route to another milestone.

She scored her 200th point in her career on Friday, and became just the third player in Massachusetts women's lacrosse history to reach that milestone.

Freshman Katie Ferris led the team with four goals, while Cori Murray, Smith, Lauren Terraceiano, and Nina Sarcona all added hat tricks.

UMass had more shots (39-10), draw controls wins (17-11), and groundballs (21-9) than GW, all while forcing the opposition into 18 turnovers.

"These girls worked so hard all season and I think the transformation of where we started to where we're finishing at the end is so impressive and is a true testament to how hard these girls work and how much they want it," said McMahon.

The Minutewomen will have an opportunity to finish A-10 play undefeated for the first time in team history as they take on St. Joseph's next Saturday in Philadelphia.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

Plourde and Carta power Minutewomen

By Pete Vasquez
Collegian Staff

UMass	9
Dayton	1

With Saturday's game rained out, the Massachusetts softball team did the most it could in its one game this weekend, defeating conference rival Dayton, 9-1, on Friday.

Sara Plourde was her dominating self, overwhelming the Flyers through all seven innings, striking out 17 batters, and allowing just three hits and one walk.

After surrendering a second inning solo home run to Dayton's Brandy Brown, Plourde retired eight in a row, seven via the strikeout, en route to her 15th win of the season.

"She was again a little bit more consistent than the last time she went out," said UMass head coach Elaine Sortino. "She's getting stronger and getting a little bit more pop on the ball everyday. Her consistency paid off very effectively. [Dayton is] a very strong hitting team. They swing free and very powerfully so I thought she contained them very well."

While Plourde has been effective each time around, her catcher, Meghan Carta, has had difficulty consistently producing out of the No. 4 spot in the lineup.

Yet one swing in the third inning made all the difference.

Carta hit the first pitch of her second at-bat over the left field wall for a grand slam, erasing a 1-0 deficit.

Coming into Saturday, Carta

See SOFTBALL on page 6

Minutemen march to MAC

UMass football program to enter Football Bowl Subdivision

By Nick O'Malley
Collegian Staff

The Massachusetts football team will become a member of the Mid-American Conference in the Football Bowl Subdivision (FBS) starting officially in 2012, according to reports from the Cleveland Plain Dealer and the Daily Hampshire Gazette.

Months of swirling rumors about the potential upgrade for the Minutemen are finally going to be cleared up Wednesday at 3:30 p.m., when UMass has planned a "major announcement" at Gillette Stadium. According to reports, that announcement will be that the Minutemen are moving to the FBS (formerly Division I-A).

UMass, which currently competes in the Colonial Athletic Association in the Football Championship Subdivision (FCS) will reportedly be moving to the Mid-American Conference. The Minutemen were rumored to be in talks with the mid-major conference for months leading up to the press conference.

No representatives from UMass or the MAC would confirm or deny the report. UMass Athletics Director of Media Relations Jason Yellin confirmed only that Wednesday's press conference was about "the future of UMass football." However, MAC Director of Communications Jeremy Guy said that the press conference was "between UMass and the MAC."

Gillette Stadium, which hosted UMass in its first-ever college football game on Oct. 23 in a 39-13 loss to New Hampshire, will likely play a large factor in the announcement. The Minutemen currently play at McGuirk Alumni Stadium in Amherst. However, the stadium's current capacity ill-suits the team for a transition to FBS, where UMass would be required to maintain an attendance of 15,000 fans per game in order to keep its status.

This means that, if the Minutemen do indeed make the transition, there will be more games played at the home of the New England Patriots in Foxboro, Mass. McGuirk Alumni Stadium, where UMass currently hosts its football games, has a capacity of 17,000 and has not consistently met that attendance threshold in the past.

For the immediate future, UMass will play its previously announced schedule of 10 FCS teams and FBS opponent Boston College, with the potential for a 12th opponent, according to the Gazette. The Minutemen will not be eligible for postseason play at any level next season.

The following year will be a transitional year in which UMass will play primarily FCS teams, including some members of the MAC, but will not be eligible for an FBS bowl game or the MAC's conference championship, according to reports. According to ESPNBoston.com, this also marks the season that UMass will move its home games to Gillette Stadium.

The stadium, which lies just under a 100-mile drive away from the University, hosted MAC officials last December when they came to look at the facilities at UMass and at Gillette Stadium as part of talks with the school.

The Minutemen will finally become a full, bowl-eligible member of the conference for the 2013 season. During this two-year transitional phase, UMass will increase its football player scholarships from 63 to 85. The increase in scholarships, in addition to other costs stemming from the jump, is not expected to cost the school any additional revenue, according to UMass Athletic Director John McCutcheon.

"From all we have looked at, the program (expansion) would be self-supporting in that way, given the new revenue streams we would be generating," said McCutcheon to the Republican last December.

If the Minutemen do indeed make the jump, they will become the third New England-based FBS program, joining Boston College and Connecticut. The Huskies, who joined the Big East in 2005, showed that an FCS program can be successful at the next level, reaching the program's first BCS bowl game, a loss to Oklahoma in last season's Fiesta Bowl.

After the disbanding of both the Northeastern and Hofstra football programs in late 2009, the Minutemen mark the third team to leave to conference in less than two years. And the damage may not be done for the CAA.

Villanova, which is coming off of a national championship in 2009 and a loss in the semi-finals of the NCAA last year to eventual champion Eastern Washington, has been in talks with the Big East Conference about a similar jump. The Wildcats, which have received a formal invitation from the BCS conference, would likely join in 2014 if they accepted.

Additionally, Rhode Island has begun a transition out of the CAA in favor of a less-competitive FCS conference, the Northeast Division.

At the moment, the CAA consists of 10 members. If the worst case scenario, the conference would drop to eight teams, which

Victims speak against sexual violence at annual rally, march

By Chelsea Whitton
Collegian Staff

Domestic violence, sexual abuse and violence against both women and men are societal issues that can impact an individual for years, and on the evening of Thursday, April 14 many in the Amherst community gathered to voice their concerns in a rally and march known as "Take Back the Night."

The annual event is sponsored by the University of Massachusetts Everywoman's Center and took place outside of the campus' Student Union Building. Take Back the Night is an annual march that aims to create unity, while raising awareness of violence against women.

Approximately 100 individuals met at the Student Union steps and later marched throughout campus, ending at the Everywoman's Center in the Augusta Savage gallery in the Central Residential Area.

According to officials from the Everywoman's Center, "The march intends to empower individual women and men to take action against violence, as well as to

The Raging Grannies, a local group supporting women's rights, attended the Everywoman's Center's annual Take Back the Night event to raise awareness about sexual violence.

Weiner to give lecture on athletes' drug abuse

By Nancy Pierce
Collegian Staff

On Wednesday, the public is invited to attend the Ken Feinberg Distinguished History Lecture on Sports and Society "Sports and Drugs-A Sordid History" led by former White House Drug Spokesman and University of Massachusetts 1974 graduate Robert Weiner. Weiner's presentation will provide an in-depth look at the prevalence of drug use among professional athletes from the past and the present and its effects on the community, according to a release.

Weiner will talk about what he believes to be a hidden history of drug use among famous athletes.

"Professional sports are a sham, they have an interest in only covering up and only setting records," said Weiner in a phone interview.

According to the release, only 68 of 500 players were willing to participate in interviews with baseball's official Mitchell Report. Weiner said in the interview that when Major League Baseball player Mark McGwire revealed his use of androstenedione, the use of the drug by youths quintupled.

"The problem is the testing can never keep up with the cheaters," said Weiner. "Over half of baseball players take drugs that can't be tested for." According to Weiner, the Major League Baseball officials test for the minimum they need to pass players. Weiner gave the example of officials' lack of testing for the human growth hormone [HGH].

In the lecture, Weiner will discuss the types of dangerous effects of these kinds of drugs have on the athletes who partake in using them as performance enhancers and the direct effect of drug use among professional athletes on the youth.

"Kids look up to sports stars, yet a large majority of kids know sports stars do drugs," Weiner said.

Weiner also plans to discuss the recent conviction of Barry Bonds, who was found guilty of obstruction of justice upon evidence that he was lying to a grand jury in 2003 about his use of anabolic steroids, according to an article titled "A Rundown of the Barry Bonds Trial" and published on April 6 in the Los Angeles Times's Sports section.

The abrupt retirement of Tampa Bay Rays player Manny Ramirez will also be a subject Weiner will touch upon during the lecture. Recent reports have suggested Ramirez' retirement occurred after he was notified of an issue with his tests for Major League Baseball's drug policy.

The release also states that Weiner feels that Bonds was not alone in his obstruction of justice, and talks about how the recent scandals concerning Bonds and Ramirez, and the pending Roger Clemens trial and Lance Armstrong investigation are "only the latest chapter of drugs in sport."

Weiner said during the phone interview that he was struck by the recent press on Ramirez and Bonds and described them as "just the tip of the iceberg." The release states that Weiner will offer suggestions for how to rectify the situation of drug abuse amongst athletes.

The event will take place at 12:20 p.m. in 126 Hasbrouck Laboratory.

Nancy Pierce can be reached at npierce@student.umass.edu.

Community rallies against sexual abuse

TAKE BACK from page 1

celebrate survivors of violence."

The event featured singers, including the Raging Grannies, who sang songs about politics and women's rights.

The event opened up the microphone for all attendees to speak and listen to victims of sexual and domestic violence and also supporters who voiced their concerns for protection against these crimes.

Sophia Zaman, a UMass junior political science major and counselor advocate with the Everywoman's Center who spoke at the event, said her goal is to educate and prevent abuse.

"We live in a patriarchal society where it's hard for a survivor to talk about the violence they've faced. It's hard for them to speak out," Zaman said. "We are trying to make sure these issues are brought to light."

She said the educator advocates with the Everywoman's Center work to bring issues to the forefront of social concern and also discuss prevention. Zaman explained that if anyone seeks help for violence or abuse the Everywoman's Center can be used as a resource.

According to Zaman, in urgent situations such as in the event that something triggers unpleasant memories for victims of sexual assault or someone is reporting a crime against them, the Everywoman's Center representatives are available to speak for over 45 minutes. During these talks, representatives help victims establish a course of action to help aid in their coping and recovery.

Additionally, the Center offers long-term counseling services, referrals to legal services and safety services, said Zaman.

UMass theater major Liz Grande Wahlman, the president of UMass' registered student organization VOX: Students for Choice, took to the microphone during the event with a compelling narrative speaking about the fear women face when walking in the dark at night to their cars or around campus in general.

"Anger can be a weapon against sexual abuse; if you maintain it, you can use it for a lot of good. And I'm pissed off. Are you pissed off?" Wahlman asked the marchers.

"Every time I see one of my sisters walking home at night looking over her shoulders at night, I get pissed off," said Wahlman. "The body is the source of our resistance. It is also responsible for taking action. I want the rape culture on all can puses to go away."

Several of the speakers shared their feelings and past experiences with the audience.

"After 20 years I realized the truth about what had happened to me," said Jessica Curran, a '94 UMass alumnae. "I think it's great what you are doing here. I drove four hours down here to say this and to be here with you. Speak out."

Marina Simons, a UMass freshman who attended the march said, "I find the statistic shocking that one in four women could be assaulted before they graduate college. This needs to change."

"I'm a survivor and I staged a speak-out before, but this is my first Take Back the Night," said Amanda Molina, a history graduate student who spoke at last year's forum on sexual assault, which came after the Boston Globe and Massachusetts Daily Collegian reported the UMass administration allowed a confessed sexual assailant to remain a student and on-campus with a suspended sentence.

I want to see solidarity among student on campus to end sexual violence," continued Molina.

"First and foremost this event creates space for affected people to speak out about sexual abuse and violence," said Ananda Tinpane, education and training specialist for the Everywoman's Center. "The hope we carry in the process of speaking back will be heard in joining the fight against sexual violence. Silence surrounds domestic violence. Events like this give people permission to say what happened."

Chelsea Whitton can be reached at cwhitton@student.umass.edu

UMass, MAC to hold press conference today

FBS from page 1

remains two above the NCAA minimum six teams necessary for a conference. However, the departure of two of the conferences most prominent teams figures to be a big blow.

UMass has not been a member of the highest division in football since the NCAA split Division I football into the two subdivisions in 1978. At the time, UMass had been a member of the Yankee Conference since its inception in 1947.

The MAC marks the fourth conference that the Minutemen have been a part of. After the Yankee Conference was dissolved in 1997, the Minutemen became a member of the Atlantic 10 before, due to a number of conference moves, moving to the new CAA in 2007.

According to the report, UMass will join the MAC as a football-only member, similar to Temple, which joined the MAC in 2007.

The addition of UMass gives the MAC 14 total teams, which are currently broken up into the East and West divisions. Current members of the MAC include Miami (OH), Ohio, Temple, Kent State, Buffalo, Bowling Green and Akron in the East Division and Northern Illinois, Toledo, Western Michigan, Ball State, Central Michigan and Eastern Michigan in the West Division.

Lectures help to raise Japanese relief funds

Two University of Massachusetts organizations will host a fundraiser tomorrow aimed at benefiting victims of last month's disastrous earthquake and tsunami in Japan.

The UMass Japanese Culture Club, in cooperation with the Asian languages and literature branch of the Department of Languages, Literatures and Cultures will be organizing the fundraiser – which will feature a number of talks and presentations, according to a University release. In addition, the fundraiser will also feature a performance by a percussion ensemble, as well as a presentation of chamber music.

Some of the presentations slated to occur will relate to the scientific impact of the earthquake and tsunami, while others will also feature first-hand accounts of what it was like to be in the country at the time of the tragedy. Rachel DePalma and Evan Storer, two UMass graduates, will give a lecture titled "What it was like in Fukushima," which will detail their account of the earthquake when working at the prefecture that serves that city and the surrounding area, the release states.

Additionally, Takaaki Morikawa, who survived the 1945 atomic bombing of Hiroshima, is slated to present a lecture.

The Japanese earthquake and subsequent tsunami, which occurred March 11, was responsible for the deaths of over 13,000 people, according to reports.

All of the Thursday's fundraising events aimed at benefiting those affected by the disaster will take place from 4:30 to 8 p.m. in and around Herter Hall room 231, the release states. While the event is free, donations benefiting Japan Earthquake Relief Fund will be accepted.

It ain't fair, John Sinclair

Emily McGovern

This past Saturday and Sunday were dedicated to the annual celebration known as "Extravaganja," an event organized by the University of Massachusetts Cannabis Reform Coalition. As in past years, the event showcased local musicians, guest speakers and vendors in the Amherst town common. In the rain on Saturday and the sunshine on Sunday, an enormous crowd formed to show their support of the CRC's views on marijuana legality and to smoke without worry.

"Was he jailed for what he done / Or representing everyone? / Free John now, if we can / From the clutches of the man."

The featured speaker at Extravaganja was John Sinclair, who became famous after being arrested in 1969 for attempting to sell two joints to undercover policemen and was sentenced to ten years in prison. His official website explains that "Sinclair was released from Jackson Prison when the 29-month campaign to gain his freedom climaxed in the mammoth 'John Sinclair Freedom Rally' at Crisler Arena in Ann Arbor, Michigan on December 10, 1971, where John Lennon and Yoko Ono, Stevie Wonder, Allen Ginsberg, Phil Ochs, Bobby Seale and others performed and spoke at the eight-hour long event in front of 15 thousand people."

Perhaps most helpful in Sinclair's premature release from prison was John Lennon's song "John Sinclair," which protested the grounds for his arrest. He asked, "Was he jailed for what he done / Or representing everyone? / Free John now, if we can / From the clutches of the man."

Lennon's lyrics comment on the fact that Sinclair did what countless others have; the only difference is that he was unlucky enough to be caught.

His actions were hardly deviant from our social norms, yet he was given a wildly disproportionate punishment that enraged thousands of people.

Sinclair's imprisonment only further encouraged him to protest the laws against marijuana, and he became a well-known activist through his speeches, poetry, and books.

He expressed his appreciation for the UMass CRC, saying, "I am impressed with the UMass group and how the school has the sense to accept that this is a part of campus life. Massachusetts has made some great strides toward decriminalization, but the struggle is far from over. In the end, all we really want to do is get high and treat our medical illness and we don't want to be interfered with by the police."

I couldn't have said it better myself. When the Commonwealth of Massachusetts voted for decriminalization, I was extremely pleased in knowing that some progress was being made in the country's outlook on drug use and personal choice.

But I couldn't help feeling annoyed that it had taken so long, and that there were still so many peoples' minds to change about its legalization.

Of course it is understandable that people have reservations about legalization, since it would be such a significant change. However, all these hypothetical problems have solutions.

As with any drug, the use of it should be up to the individual. Any health issues that could ensue can be prevented by the user instead of the law. I think it's safe to say that everyone is aware of the effects of drugs (and if they aren't, legalization would make them even clearer with warning labels), so each person should be able to make the decision of how much to smoke on their own.

Legalization would only encourage personal choice and responsibility for one's own body, not unhealthy practices. Just as we cannot justify banning unhealthy foods or cigarettes, the government cannot justify making health choices for us.

As soon as the user breaks the law by endangering another person, it is perfectly permissible to hold them responsible for their actions, whether under the influence or not. But it is completely possible to use this drug without harming anyone.

The bottom line is that the legality of drugs is an issue of personal choice. What we do with our own bodies should be up to no one but ourselves. The government should never be given this much control over our lives to decide whether or not our health choices are legal.

We should all support the policies of the CRC and John Sinclair's activism, because they are working hard to ensure that the people get to personally make the choices that define them.

Emily McGovern is a Collegian columnist. She can be reached at emcgover@student.umass.edu.

Rest in peace, Guru

Dan Gigliotti

Late last summer, two weeks before the fall semester began, my friend and I traveled to Governor's Island in New York, to attend the "Rock the Bells" music festival, which is probably the largest hip-hop festival the world over.

In one of the greatest ensembles of rap and hip-hop artists ever assembled, we watched on as legends of rap lore ripped through their classic rhymes.

There, Slick Rick perused the stage piping his playful prose; pioneer KRS-One cold-rocked the mic with an unconscionable flow that crazed the crowd; and Rakim reeled off rhymes in his rampant rhetoric, revisiting resplendent raps from yesteryear.

Did I mention A Tribe Called Quest, the Wu-Tang Clan, Snoop Dogg and Lauryn Hill were also on the bill?

Still, among the indomitable heavyweights of rap's past, there was someone missing.

When we first arrived, we got off the ferry at about 12:30 p.m. Performances were slated to begin at that time, and with such a great lineup from start to finish, I knew I would regret missing any of the performances, least of all a special tribute by DJ Premier.

To my surprise, DJ Premier, or Premo, opened the main stage that afternoon as my friend waited in line to gain entry into the venue.

A veritable superstar producer in his own right, Premo commands attention on stage, even when he's spinning solo. Still, his lone presence was a reminder that his partner wasn't there to emcee over his beats and that neither I, nor anyone else, would ever get the chance to see the duo of Gang Starr perform live.

Gang Starr, consisting of DJ Premier and emcee Guru, was the greatest rap duo to ever rock the mic.

Guru, who passed away exactly one year ago on April 20, 2010, was an absolute genius. As his name suggests, he had a style that epitomized hip-hop the way it was meant to be.

Guru was an absolute genius. As his name suggests, he had a style that epitomized hip-hop the way it was meant to be.

His stage name was a backronym for the phrase "Gifted Unlimited Rhymes Universal" and he rhymed out of Brooklyn, NY, in the Mecca of hip-hop, though he had his roots in Roxbury, Mass, where he was born.

With a monotone flow and an incredible talent for constructing rhymes, Guru combined the storytelling of a classic novelist with the craftiness of a poet laureate. He philosophized about urban issues with the integrity and cynicism of a scholar, while imbuing the cleverness and grit that gave him credibility and admiration in the rap community.

Although his mainstream success in the form of album sales and name recognition don't suggest it, he was easily one of the most influential emcees in hip-hop. His lyrics were sampled in songs by the Notorious B.I.G. ("Gimme the Loot") and Tupac ("I Get Around"), but it was his conscientious rhyme-style that undoubtedly spurred many an emcee to liken his flow, especially in the golden age of hip-hop he prospered in.

Coupled with the impeccable production of DJ Premier, Guru gave insight into the trappings of relationships in "Ex Girl to Next Girl," provided commentary on civil rights issues on the song "Conspiracy" and displays his intellect in what might be his most well known track, "Moment of Truth."

Beginning in 1993 the versatile artist began a series of jazz-infused hip-hop albums, including collaborations with artists like classic jazz and soul artists Isaac Hayes, Chaka Kahn and Herbie Hancock.

Out of all of the incredible artists I looked forward to hearing play at "Rock the Bells," I couldn't help but be disappointed by the fact that Guru wasn't one of them. It pained me more to see the disregard that accompanied fellow concert-goers during Premo's tribute to the late Guru.

Even though the show was only months after he succumbed to cancer, it was as if his passing and Premo's commemorative set were just afterthoughts in the lineup of performers.

I can understand that it was early on in the afternoon. Fans didn't want to dwell on who wasn't performing, but be excited by those who were.

Yet, with the increasing popularity of mainstream hip-hop music by way of dance-anthems, the promotions of materialistic and misogynistic values and an unmistakable fluffiness about rappers nowadays, it's a shame that Guru's no longer in the game.

Guru's form of intellect was beyond comprehension, kicking precisely the right rhymes with mass appeal. The man had skills, gusto, knowledge and positivity. If you've never heard of him, check the technique because, well, it was much too much.

For all of you smokers out there, I am well aware of the celebratory nature of today's date. But on this day, one year since the late-great Guru succumbed to cancer, take two and pass in remembrance of this pioneer of rap.

After all, what's here today could be gone tomorrow.

Five Reasons Why UMass football shouldn't join Division One:

1) The other teams' players are bigger and scary.
2) The ghost of Warren McGuirk will seek revenge.
3) Why should Gillette have almost as many teams as blades?
4) Mixed martial arts will be the sport of the 21st century.
5) Tailgating will require getting up that much earlier.

ED/OP

Craven leaves audiences 'Scream'ing

By Herb Scribner
Collegian Staff

After all the blood, twists, turns, jokes and creepy phone calls, "Scream 4" has emerged as one of the best of the series following its premiere last weekend.

The latest chapter of the story opens with Sydney Prescott returning to her hometown of Woodsboro, Calif., where the initial murders of the first "Scream" movies took place. Prescott is not only promoting her new book, but visiting her cousin Jill and connecting with old friends Dewey Riley (David Arquette) and Gale Weathers-Riley (Courtney Cox). Of course, Sydney's return sparks a spree of murders that have a connection to the first "Stab" (a movie-within-a-movie) film.

The film is filled with familiar cast members that surprisingly don't become annoying, and actually connect with the audience. Though many of them play minor roles (seeing as the story is still focused on Sydney and her cousin Jill for the most part), every character is interesting to follow. From Kirby's rebellious attitude to Charlie's insanely nerdy movie trivia, the characters are diverse and relatable, which makes the film all the more suspenseful. One of the key things in the "Scream" films is the continuous mystery about who is behind the mask. Because the cast is full of familiar faces, and so many of them are easy to sympathize with, it clouds the viewers' vision when trying to decipher what is going on.

When the killers are finally revealed at the end of the film, the audience gasps at the realization about who was behind the mask and how it came to be. The ending provides the viewers with an interesting perspective as they exit the theater. There's a duality evident in the final moments between hero and villain. This is a part of the genius of the film, as it shows that one person's hero is another's villain, and vice versa.

It's interesting to watch "Scream 4" because it's a new form of the series in a new era. The initial "Scream" films poked fun at the slasher films like "Halloween" and "Friday the 13th." Fast forward 10 years, and "Scream 4" is calling out the "Saw" films and other current day horror movies. It's an interesting transition to see how far the horror industry has come.

The downside to the film lies with its inability to accurately display the gap of time that has passed. While it shows the transition of horror movies, Sidney's story doesn't feel as though it has progressed 10 years. Other than publishing a book, viewers know nothing about what happened in her life between the two movies.

Additionally, Sidney makes no reference to previous killers except for Billy and Stu from the first movie, and that is only during one sequence. She doesn't reference how she thought it was over after the third film, or the motives behind previous killers.

What's also perplexing is that Sidney doesn't ever reference the characters from the first film, or have any reflection of her previous life. When she visits Woodsboro High, she doesn't look around the halls or get the chills of being in the school where everything started. She doesn't visit her old house, or Stu's house, or her (now dead) best friend Tatum Riley's house. It feels as though Woodsboro could be replaced with any other town. There's no real historical backdrop. Though viewers are told continuously about how Woodsboro is the scene of the original murders, they aren't ever given any points of reference or images of that to relate back to.

Viewers will notice an interesting transition towards the end of the film. Without giving away too much, the scene could act as an ultimate ending to the initial series and a perfect beginning of a fresh new idea. Instead, there's an added selection of scenes that not only lower the killer's credibility, but also keep the series on the traditional path. It's not necessarily a bad thing, but it's a little frustrating to have this entire build-up only for it to be diminished so quickly.

Ultimately, "Scream 4" works because it is in line with what the original movie set out to do. It set out to be critical of horror films while also presenting its own sort of modern interpretation, and proves that very generation has something to scream about.

Herb Scribner can be reached at hscribner@student.umass.edu.

David Arquette and Courtney Cox return as fan-favorite characters Dewey Riley and Gale Weathers-Riley in "Scream 4." In the latest installment by director Wes Craven, the two are married.

The best of the bargain bin: 'Killer7' an underground hit

By Joe Kling
Collegian Correspondent

"Killer7" is a 2005 first-person shooter (FPS). While it lacks many familiar aspects of FPS's and has a somewhat frustrating control scheme, it still deserves a second look.

You play as a group of assassins known as the Killer Seven, made up of seven people you can alternate between on the fly while playing. It features a suave but ruthless killer in the same vein as a James Bond villain, a thief with the ability to scale any building, a blind boy who can run at lightning speed, a woman who walks around in bare feet while sniping her targets, a man who can turn invisible and throw knives with deadly accuracy, a Luchador with a grenade launcher, and the "cleaner," who will resuscitate any character who dies. "Die" isn't exactly the right word; the characters are all dead already. Their bodies have been taken on by Garcian, the cleaner, as multiple personalities, and he can switch between them at will – unless one of them dies in combat. In the case of such an event, Garcian must pick up the bag that they have left behind. If you die as Garcian, however, the game will end.

Confused yet? The Killer Seven work as assassins for the U.S. government and go after some pretty interesting characters, such as a megalomaniac who created his own town in Texas and an organ trafficker who stuffs the bodies of his victims. The bad guys you will be facing for the majority of the game, though, are the "Heaven Smiles," who can best be summed up as exploding zombies who laugh maniacally as they blow up in your face. The Heaven Smiles come in a variety of shapes and sizes. Most look like typical zombies, but some have giant deformed hands, bombs for a head, or are strapped to a gurney and shoot you with an instant-kill laser. Most of them explode into blood if you shoot them in their weak points, which you can use to upgrade your abilities via a blood room found in various places in the levels. In many respects, the game is pretty insane.

The issue that turned many people off of the game is the strange control scheme. Most shooters will allow you to run around and aim with separate analog sticks, but "Killer7" has you running in a third person control with the A button, and pressing B to turn around. The game's layout is set with multiple "rails" that you can go down, but there is only the option of going forward or backwards, until you get to a branching pathway. In order to actually shoot, you have to hold down the R button to enter first person mode and press L to scan for enemies (because they're invisible to normal people) before you can shoot the crap out of them.

It's not surprising that this departure from the normal FPS turned off many fans of the genre who were so used to the smooth controls of games like "Halo," "Call of Duty," and even "Grand Theft Auto." Perhaps the awkward control was meant to instill the same kind of helpless feeling of the slow tank controls in "Resident Evil," but if the point was to add fear via subtraction of a good control scheme, the plan failed. The control is fine once you get the hang of it, but it is always a pain when a Heaven Smile is right around the corner that you can't see due to an awkward camera angle and the only options are to go forward or backward.

While the developers failed to create an ideal control scheme, they still managed to instill fear, anxiety, sadness and even moments of happiness thanks to their brilliant use of music in the game. All sound effects and music were developed by two workers who worked closely with the game developers to build the mood to each and every scenario in the game. You can tell the team really put a lot of effort into each and every scenario, and the result was nothing short of astounding. One of the most memorable instances is seen right before every boss fight; the player walks up an empty staircase lacking anything but an entrance and an exit. However, as you can hear faintly in the background before you enter, the staircase is home to a fast-paced and incredibly happy techno beat. The song is almost like a reward for completing the level, or a de-stressor before the boss fight, a welcome change from the overall eeriness of the rest of the game.

Overall, "Killer7" is a fantastically wild story with a vibrant soundtrack hidden under some questionable controls. It can be found for the Gamecube or PS2 for $5-10.

Joe Kling can be reached at jkling@student.umass.edu.

"Killer7" allows gamers to choose from seven assassins for the purpose of completing various missions, one of which involves the foiling of an insane organ trafficker's plot.

'Twelfth Night' to hit UMass' FAC stage:

20s jazz sounds to enliven Bard

By Alissa Mesibov
Collegian Staff

When it comes to having it all, few plays are better than William Shakespeare's "Twelfth Night." It has classic romance, verbal and physical comedy, bold fighting, and cross-dressing. As clichéd as it sounds, the play really does have something for everyone and it's coming to the University of Massachusetts Department of Theater on April 21.

The play revolves around Viola, who survives a shipwreck that seems to have killed her twin brother. Fearing what could happen to a penniless, shipwrecked woman on her own, Viola pretends to be a man and takes employment in the household of the noble Duke Orsino. The duke sends Viola, now going by the name Cesario, to woo the beautiful Lady Olivia.

This poses a problem for Viola, who has fallen for her employer. Despite such feelings, she pursues Olivia, though the task is not simple, since Olivia is in mourning for her father and brother, and refuses to see any man. Things further complicate when Olivia falls for Cesario, believing her to be a man. All this is accompanied by the trickery of various mischievous servants, Olivia's alcohol-loving uncle trying to get Olivia to marry an idiotic knight and the smooth sounds of 1920s jazz and blues.

A great challenge in approaching Shakespeare is how to make it fresh. Director Dawn Monique Williams' answer is through the jazz and blues of 1920s America. "The more I read the lyrics," said Williams in a press release, "the more I felt its connection to the blues. While talking with Nick Keenan, the guest sound designer for the play, blues came up as the best fit with the lyrics and for its 1920s feel."

Music plays an extremely important role in this production, with both live performances and pre-recorded tracks. Williams took advantage of the multi-talented cast. Several of the actors either sing or play instruments in the production, in addition to playing their characters.

"Twelfth Night" is the department's first Shakespeare play in nearly two years, having produced "Pericles" in 2008.

Freshman Daniel Kadish, 19, plays Sir Andrew Agueecheek in his third production with the department.

"Sir Andrew is the lovable idiot," Kadish said of his character. "He has a lot to say, but doesn't ever know exactly how to say it, because he has roughly three brain cells. He is void of the ability to censor himself and says everything that pops into his head. He's slow on the uptake but with a little explaining, he'll get there. Despite all that, he's extremely sincere."

Kadish found his biggest problem to be "finding the difference between trying to be funny and being truthful to the text and letting the text be funny enough in itself. One should never try to be funny on stage." The struggle was certainly worth the reward for Kadish, who said the cast and director he works with are by far the best part of the experience.

"There was a sense of community since day one that has only grown," Kadish said.

The cast features Brittany Costa as Viola, Andrew Ferlo as Orsino, and Kate Hare as Olivia. The company also includes Kadish, Duncan Grossman, Julia Piker, Greg Boover, Troy Pepicelli, Connie Russo, Sam Perry, Clay Luopa, Matt Brooks, Monica Giordano, Jonathan Remmers, and Jimmy Vidal.

The artistic team team includes Williams, dramaturge Megan McClain, scenic designer Miguel Romero, costume designer Erin Amelia White, lighting designer Jessica Greenberg, and guest composer and lighting designer Nick Keenan.

"Twelfth Night" runs April 21-23 and April 28-30 at 8 p.m., April 23 and 30 at 2 p.m., with a special school matinee April 27 at 10 a.m. in the Rand Theater. Tickets are available by calling 413-545-2511 or 1-800-999-UMAS. Tickets can also be purchased through the Fine Arts Center Box office in person or by visiting their website.

Alissa Mesibov can be reached for comment at amesibov@student.umass.edu.

UMass begins 4-game week against UConn

Candice Waldie waits to move against Dartmouth.

PREVIEW from page 8

defense and pitching have all emerged from their early-season slumps, and now that the squad is playing and practicing outside on their home turf, the results have spoken for themselves.

"There's no place like home," UMass head coach Elaine Sortino said in an interview last week.

That could be bad news for the rest of the Atlantic 10 when conference play resumes in May. Of their 17 losses in home history, only five of them have come against conference opponents, and in 13 A-10 tournament games at the UMass Softball Complex, the Minutewomen have won 11 times.

The offense has also heated up in the warmer weather and the defense has improved dramatically since the team began playing games at home. During its current eight-game winning streak UMass has won four games by a run margin of at least four, and in its most recent contests, the offense has tallied seven and nine runs, respectively.

Lindsey Webster leads all Minutewomen in batting and home runs, hitting .323 at the plate with four round-trippers and 15 runs batted in. Right behind her is Audrey Boutin, who is batting .301 with 12 RBIs.

Early season defensive woes are behind the Minutewomen as well. Where they were making as many as four or five errors in a single game early on, the Minutewomen have now cut that number to about one per game.

UMass has lit up at the plate throughout half of its winning streak, but the remaining four games were all one-run contests, including a pair of 1-0 victories.

The week begins with Wednesday's 4 p.m. matchup against the Huskies in Storrs, Conn. The team will then play in Amherst on Thursday at 5 p.m. against Fairfield, followed by a 2 p.m. doubleheader against the Orange on Friday.

Michael Wood can be reached at mcwood@student.umass.edu.

Jordan Storro passes the ball against Dartmouth.

A member of the Flyer softball team prepares to pitch the ball. The Flyers are on a surge this season as they broke their single-season home run record with 31 round-trippers.

Flyers surging forward as they break HR record in a season

By Brady Ashe
The Flyer News (Dayton)

The Dayton softball team has broken records and produced personal bests all season despite a slow start in the standings.

In the second game of a doubleheader against Morehead State University on Wednesday, April 13, freshman catcher Kasi Vasquez hit a solo home run in the fifth inning. The home run marked the team's 31st homer this year, breaking the single-season record of 30 set in 2000.

Morehead State swept UD in the doubleheader, however, which marked the beginning of the Flyers' six-game homestand. Junior first baseman Lauren Nacke said the team can't afford to be swept at home, where the wins should come a little easier.

"Home games are just easier to win because the atmosphere is more comfortable and everyone is more relaxed," she said. "We control a lot of aspects of the game and we have more fans there so we need to win at home."

Nacke, who has a .388 batting average, hit her 13th homer of the season in the first game of a doubleheader against Rhode Island Sunday, April 17. Her two-run blast in the fourth inning marked her 30th career homer which is Dayton's all-time record.

"It's a pretty amazing feeling to hold the record," she said. "We have a lot of talented freshman with big bats, though. Maybe one of them will break it one day."

The Flyers have a 15-22 record, and are particularly young this season, with seven freshmen among the 18 players on the active roster. Leading the freshman class is left-handed pitcher Alysha Isaacson from Chula Vista, Calif.

Isaacson has a 9-9 record with a 3.63 ERA and a .333 batting average, as of Sunday. She earned Atlantic 10 Conference Rookie of the Week honors after winning in a complete game, one-hitter against the Saint Louis on Saturday, April 9.

"It definitely stands up there on my list of achievements in softball," said Isaacson about the one-hitter. "It was a total team effort, though. The offense was on, the defense was on, [and] everyone just had an awesome game."

Despite her early success, Isaacson said she has not grown complacent and looks forward to her future as a Flyer.

"I want to keep getting better," she said. "I got a one-hitter, now I want to get a no-hitter. I don't want to stop."

The Flyers hold a conference record of 7-6 and have four more conference match-ups this week. UD earned its first series sweep in a doubleheader against Rhode Island Sunday. Nacke said it is essential for the team to pick up as many conference wins as possible to get a chance to compete for the A-10 Championship this year in Charlotte, N.C., Wednesday, May 11.

"Conference wins are really key," she said. "We've been getting a lot of splits this year and we need to start sweeping teams if we're going to compete for the title."

The Flyers will conclude their 50-game schedule with eight consecutive home games between Monday, April 25, and Sunday, May 1, at the UD Softball Stadium. The team's next home event is two games against Miami University starting at 2 p.m. Monday, April 25.

This article is special to the Daily Collegian from the Flyers News.

Rain cancels games for Minutewomen in 2011

Buzz Classic, game vs. BC cancelled after rain

WEATHER from page 8

Buzz Classic, which was also cut short because of weather, a series against Kennesaw State, UNC Greensboro and Georgia Tech were never made up.

And when the Minutewomen have taken the field they have put on a show featuring solid all around play.

"We've had overall consistency on three ends: pitching, defensively and hitting as well," said Sortino. "We are in a better spot and we're continuing to get better."

Each of the three phases soundly presented itself during their 9-1 win.

Nikki Sara Plourde continued to overpower her opponents, going all seven innings and striking out 5 batters. The offense exploded for nine runs.

Four early innings set the tone for the Minutewomen. In the third inning, the power display for UMass was on. Back-to-back home runs from Meghan Carta and Stephanie Mayne accounted for all five runs.

The sixth inning saw the Minutewomen take advantage of suspect defense by the Flyers. Three hits, one passed ball and an error later, the score ballooned to 8-1.

The best play of the game, according to Sortino, was when Carta threw out a runner trying to steal second. It was a fitting last play of a impressive game for UMass.

The Maroon and White currently sit in third place in the A-10 standings. While the three conference losses are equivalent to the top two teams, the eight wins are three less than conference-leading Fordham.

It is possible that the Minutewomen could be tied for the A-10 lead without these rainouts. However, the players have not lost focus during these postponements, putting a sporadic run together.

UMass' current streak is the longest of the season, doubling the previous longest streak of four from March 11-12.

The streak also helps nullify an eight-game losing streak the Minutewomen suffered earlier in the season from Feb 20 to March 4.

UMass is scheduled for six games this week, including two doubleheaders. Weather permitting, the Minutewomen hope to keep their sporadic winning streak alive.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

Ace pitcher Sara Plourde waits on base for the Minutewomen against Saint Louis earlier this season. Plourde and the rest of the Minutewomen are riding an eight-game winning streak.

Streak tested against Huskies today

Sortino's squad looks to rise to top of A-10

By Michael Wood
Collegian Staff

It's going to be a busy week for the Massachusetts softball team.

The Minutewomen will play three more away games this season, beginning with a matchup against Connecticut on Wednesday, and then the squad will return to the UMass Softball Complex for three-consecutive games against Fairfield and Syracuse on Thursday and Friday.

UMass will meet all three opponents for the first time in 2011, as it currently rides an eight-game winning streak. The Minutewomen haven't lost a game in almost a month and enters the contest winners of 10 of its last 11 games.

Junior ace Sara Plourde has shown impressive skill, throwing 171.2 innings while recording a 1.39 earned run average and nearly 300 strikeouts en route to a 15-10 record. She has given up 49 runs and opponents are hitting .138 against her.

Plourde hasn't lost a game she's started since a doubleheader on March 26 against Temple. In that contest she was hit hard and gave up six earned runs on five hits. However, she struck out a number of Owl batters (13), but she also walked seven and allowed all seven of Temple's runs in the bottom of the first inning.

Since then, Plourde has been nothing short of automatic on the mound, and a lot of that has to do with coming back to Amherst.

The Maroon and White have lost 17 games at home since 2000 and are undefeated at UMass Softball Complex thus far in 2011. The offense,

Games cancelled due to troublesome weather

By Pete Vasquez
Collegian Staff

The members of the Massachusetts softball team are growing increasingly consistent all around the diamond, and are riding an eight-game winning streak in the process. Now if they can just get consistent weather from Mother Nature, the Minutewomen can try to sustain their momentum as conference playoffs near.

After its latest win, a 9-1 victory over Dayton, UMass (17-14, 8-3 Atlantic 10) learned that the second game of Saturday's doubleheader was cancelled and wouldn't be rescheduled.

News of rainouts is coming as no shock to UMass, as the team has heard this story more than a handful of times.

While cancellations are a part of the outdoor game, stretches of continuous rainouts are starting to take their toll on the Minutewomen.

"We don't take it very well," said UMass coach Elaine Sortino. "It's very, very important that we play every conference opponent, and that we get all our conference games in. We've certainly had our share of losing games to bad weather. This is the sixth game we lost to rain and that's enough already."

Before their most recent postponement, the Minutewomen's trip to Boston College on Wednesday was also cancelled due to rain. That makes UMass 1-for-3 in attempted games played for the week.

Earlier this season, UMass participated in the

UMass heads to Northeastern for 1st round of Beanpot games

By Scott Cournoyer
Collegian Staff

The Massachusetts baseball team will compete in the Beanpot Tournament this week with the first round being played in Lowell and the final round at the historic Fenway Park.

Since getting a seat at the tournament, the Maroon and White has been a force, representing the school in the finals the first six years since coming in, including back-to-back crowns in 1996 and 1997, along with championships in 2000 and 2008.

Every year, teams alternate opponents in the first-round contests. This year will be no different as UMass will take on Harvard on Wednesday at Northeastern.

UMass (12-17, 5-4 A-10) is currently in its conference schedule, recently taking two-of-three games against Temple, who went into the series last weekend with the highest team batting average in the country.

The Minutemen also defeated Central Connecticut State, 8-3, yesterday afternoon.

Senior Peter Copa and Matt Gedman have helped carry the Minutemen offense, ranking second and third in slugging percentage. Gedman leads the league in on-base percentage.

With a nice break in between pivotal conference games before the home stretch with the Beanpot, a trip to Lowell and Fenway Park may be the trick for a team with15 conference games remaining.

Harvard, an Ivy League representative, is currently 6-27 overall this season, winning one game since late March, before it won two last weekend against Brown.

Junior infielder and catcher Jeff Reynolds has been the Crimson's best hitter statistically, producing a .316 average, and ranks seventh in the conference in hits (39). The power has come from junior Marcus Way, who's currently tied for second in the conference in home runs with six, and freshman Jake McGuiggan, who is tied for third in doubles with 10.

Although the team has posted shaky pitching across the board, one bright spot has been senior Max Perlman, who posts a 2.03 earned run average over 44.1 innings of work. He's struck out 41 batters, walked 15 and surrendered three home runs.

UMass will get to work Wednesday at Northeastern, followed by a tournament wrap-up game at Fenway Park early next week. This will either be the final of the tournament or a consolation game for the historic tournament that began as a hockey competition.

Since 1952, the Northeast region has hosted the Beanpot Tournament - an event featuring some of the most prestigious academia the Boston area parking in a three-game, four-school hockey tournament.

Although either Boston College or Boston University has played in the finals every year since the winter of 1978, a rich tradition has been set forth for the local community to see, and has allowed fans across the region to come out and celebrate the event.

In 1990, a new tradition was set forth, this time on the baseball diamond, as the Big Four showcased their baseball programs against each other in a similar three-game tournament, with consolation and championship games played at historic Fenway Park.

However, at the start of the 1996 season, a new participant would have to enter the picture, as BU announced concluding their previous spring's campaign that they would be cutting their varsity program. Teams such as Vermont, Maine and New Hampshire all made their case for the bid, but Massachusetts wore the crown as the top dog who would represent another section of the region in a tournament that would show some of the best players New England collegiate baseball had to offer.

Scott Cournoyer can be reached at scournoy@student.umass.edu.

Senior Matt Gedman is congradulated by a coach during a game against Dayton earlier this season. Gedman will lead the Minutemen to Northeastern for the first round of the Beanpot Tournament.

A Minuteman attempts to hit the ball against Dayton earlier this season. The Minutemen will look to avoid even more weather issues as they battle in the Beanpot Tournament.

Minutemen finding success against A-10 pitching staffs

By Michael Counos
Collegian Staff

The Massachusetts baseball team currently sits in seventh place in the Atlantic 10 standings and has found success against conference pitchers this season.

UMass (11-17, 5-4 A-10) is coming off a loss against Big East opponent Connecticut, 18-3 on Monday. UConn is one of the non-conference opponents which has been hurting the Minutemen side this season.

In 19 non-conference matchups UMass is 6-13 compared to an above .500 win percentage against A-10 talent.

"They have very good pitching, they have good defense and they hit the ball," said UMass coach Mike Stone about playing against non-conference opponents.

In nine games this season UMass has scored 86 runs averaging over 9.5 a game, compared to scoring 99 runs in 13 non-conference game, an average of about 7.6 per outing.

UMass is also coming off an offensive outburst over the weekend against Temple, scoring 48 runs in its three-game series including a 25-10 win in the series finale on Sunday. The 25 runs scored was the most in UMass school history against an A-10 opponent.

In the Minutemen's previous two A-10 series against George Washington and Dayton, they scored 19 runs. The Minutemen have won two of their first three conference series this season.

"Really everybody stood out over the weekend, with multiple hits and multiple RBIs," said Stone. "Everyone just looked really comfortable in the box and it showed that we don't have any shortage when it comes to scoring runs."

In its record setting game, UMass scored a run in every inning, after dropping the previous game 10-9 in extra innings. The Minutemen scattered 24 hits and led the entire game, as the Owls cut the deficit to two in the first inning. All nine members of the UMass lineup recorded multiple hits and each scored at least once. Throughout the entire series, UMass had 52 base-knocks.

"We were swinging the bats pretty well and everybody got their hits today," said second-baseman Eric Fredette in a UMassathletics.com interview. "We knew that we were swinging the bats well all weekend, so we knew if the pitchers could just hold them we would come out on top."

Fredette went 3-for-5 with 4 RBI in the series finale.

Though Fredette put in strong numbers, senior Matt Gedman has also been dynamic from the batters box as he extended his hitting streak to a career-best 15 games on Monday. Gedman is leading the team at the plate with a .447 batting average, 51 hits and 28 runs scored. He is also tied for second on the team in doubles and is second in RBI behind senior Peter Copa.

"I mean we know we can do it, it's just we're all starting to [put] it all together," said catcher Tom Conley in a UMassathletics.com interview. "It was pretty much just Pete and Matt at beginning of the year, so it feels good that a lot of people are starting to get hits."

With their most recent stumble against UConn the Minutemen looked to get back on track on Tuesday against Central Connecticut State University.

Group to alter student code

By Chris Shores
Collegian Staff

A special commission on the University of Massachusetts Code of Student Conduct – formed in the wake of an administrative mishandling of a rape case last spring – has released its recommendations for changes in the Code.

The commission – at one point 21 strong and now currently made up of 16 members of the University community – was appointed by Vice Chancellor for Student Affairs and Campus Life Jean Kim last April. They are now asking the campus community to respond to the recommendations. Suggestions to the changes can be sent to the commission until tomorrow, Friday, April 22. The dommission will then revise if necessary before submitting its final recommendations to the administration. The UMass Board of Trustees must approve the changes before they go into effect.

Brandon Tower, an undergraduate student member of the Commission and former president of the Student Government Association, said that the biggest change involves a new right given to victims of violence. The Code previously included a process to appeal decisions, but this right was only given to the accused party, not the victim, said Tower.

The revised Code includes text that reads, "In cases involving violence, including bullying, physical assault, harassment, sexual harassment, sexual misconduct, invasion of privacy, relationship violence, and stalking … a complainant has the right to appeal the decision of the hearing board on the same grounds and using the same procedure [as the appeal procedure already stated]."

"Now a victim of sexual assault has the right to appeal the decision to whoever handles the case," said Tower. He pointed to another added clause that gives the chancellor the ability to intervene in "exceptional cases" to review the final decisions made by University officials.

"The Chancellor … at his/her discretion or upon request by any involved party … may refer the case back to any level for further review, may affirm the decision, or may overturn the decision," reads the dommission's recommendation. "The Chancellor or designee's decision shall be final."

Tower explained that appeals are a part of any judicial process and that the added appeals are in no way a violation of students' rights. He also said that the commission worked hard to find a balance between the rights of the accused and the rights of the alleged victim.

Another area in which the commission called for major change was the alcohol policy.

"Although this was no part of our official charge, at the request of some student members, the Commission devoted considerable time to a discussion of the appropriate response to a first violation of the alcohol policy," reads the commission's report.

"At UMass, we give out more sanctions than diplomas and the vast majority are housing violations of [the] alcohol policy," said Tower, who explained that the current sanctions for first offenses are enrollment in the BASICS program, a $100 fee and a year of housing probation. "We thought that was harsh and we pushed for changes," Tower said.

The commission recommended continuing to require BASICS enrollment, but reducing the fee to between $25 and $50 and removing completely the housing probation sanction.

"We recommend [this], the effect of which is to eliminate housing probation as part of the response and

From afar, bicyclists slow as they inch up, peer around a corner and disappear behind a fence, while disrupted foot traffic files in and out one-by-one. They approach what appears to be a construction site and hear the sounds of Native American ceremonial hymns, with the clanking of machinery and noisy helicopters surrounding a new on-campus exhibit.

For the next week and a half, a photographic replica of the border between southern Arizona and Mexico will exist between the parking garage and the campus center to demonstrate the effects of driving a barrier down the center of a community. Organizers of "The Borders Crossed Us" expect its effect to compound over time as the fence continues to divide campus through May 1.

The exhibit is meant to simulate the effect of the fence built by the United States government after 9/11 which cuts in half the Tohono O'odham Nation, the second-biggest federally recognized Indian reservation. It was created by artist Catherine D'Ignazio from the Institute for Infinitely Small Things, an artists' collective that focuses on projects that take place outside the traditional museum or gallery setting.

Printed on mesh screen-like material used to wrap fences on typical construction sites, the exhibit features photographs taken of the border from the backyard of Ofelia Rivas, a native of the Tohono O'odham Nation.

"That is my backyard. That is what I have to deal with now. Helicopters are there every day. They didn't ask permission from the people who were originally there," said Rivas.

Rivas described instances on her own land where she said she was stopped for questioning by border patrol because of the color of her skin, thrown against a car in questioning

Football joins FBS officially

By Dan Gigliotti
Collegian Staff

FOXBORO — The University of Massachusetts officially announced its move to the Football Bowl Subdivision during a press conference at Gillette Stadium on Wednesday.

UMass, which previously played for the Football Championship Subdivision in the Colonial Athletic Association, joins the Mid-American Conference on a transitional basis for football only.

The announcement was made by Chancellor Robert C. Holub, who expressed how the move would gain UMass greater national recognition.

"This move advances our aspirations to assume our rightful place in the upper echelon of national public research universities," said Holub. "Our move to the top of the college football world now becomes part of our overall move towards ever greater national prominence."

Veterans record experiences of war overseas

By Alyssa Creamer
Collegian Staff

A soldier stumbles down a dusty cracked dirt road. His vision is blurred, and his anxiety is mounting, suspended in a bizarre silence. A sigh of relief hinges on the tip of his airways. Then suddenly, a sharp noise strikes through his radius of surrounding air, lasting longer than one would imagine, but not long enough to deafen the sounds of the blast's aftermath.

And in America, thousands of miles away from the war, days and months since the occurrence, reality snaps back into focus for Iraqi War army veteran Terrance Russell. The noise isn't an improvised explosive device taking its victims, clouding him in smoke. It's the dull clunk of a garbage truck passing through his street – a machine that poses no single threat to passersby, save for Russell and his memories.

Post-traumatic stress disorder (PTSD), a serious mental health condition prevalent among many of America's soldiers who come back from war-torn countries, often creates a great deal of issues for soldiers as they re-assimilate into a culture arguably ignorant, or at least, majorly untouched by the horrors of war. PTSD's association as a taboo or unknown illness is dead with its old pseudonym "shell shock" within modern culture, and according to the University of Massachusetts' Veteran Services Coordinator Judy Gagnon "PTSD is now an accepted illness." Still, many soldiers battle at home with how to cope with it.

"PTSD can take many forms," said Gagnon. "Some soldiers come back and they are fine … others have seen atrocities that we can't even imagine, and they're back here and life is normal … but it's like nothing is the same."

Soldiers with PTSD may suffer from nightmares or flashbacks. Gagnon also said that an additional symptom of PTSD could be individuals "blocking out thoughts that they don't realize they're blocking out and an event may trigger them."

This problem has generated a number of solutions on national and local levels. But one outlet for sufferers hitting the Pioneer Valley is getting veterans to express their perspectives and experiences in war through writing.

In a project called "The Pioneer Valley Veterans Writers Project," organized jointly by the Veterans Education Project in Amherst, UMass Veterans Services and the Daily Hampshire Gazette, veterans were asked to meet for writing workshops at UMass to gain greater writing skills and join a safe environment with fellow veterans to decompress past terrors through creating all forms of literature – from poetry to letters to fiction and non-fiction pieces.

According to Gagnon, those involved with the project "wanted to give veterans an opportunity, if they wanted to, to learn to express their experiences in a cathartic way."

Russell, who served in Iraq twice in the last decade and was part of the army's military police, said he has been trying to write to "finally feel back at home."

"I don't think I made a difference in the war," said

UMass celebrates Earth Day

By Chris Shores
Collegian Staff

Students hoping to celebrate Earth Day today need not look any further than the library lawn where a variety of campus organizations will gather together for the third annual Earth Day Festival, beginning at 11 a.m.

Claire Hopkins, interim secretary of sustainability for the University of Massachusetts Student Government Association, said the event was a way to "unify" the holiday.

"It's a celebration of what we are doing on campus and shows how students can get involved," she said.

The event is run by four main entities: Gardenshare, the Sustainability Initiative, the Eco-Reps and the Student Government Association. In addition, said Hopkins, a variety of other groups will be present, including MASSPIRG, UMass Dining Services and its new permaculture garden, Earthfoods, the People's Market and the UMass Craft Center.

Students can come and tie-dye a shirt, which they will receive for free, Hopkins said. Students can also receive reusable bags and cups.

The Sustainability Initiative will do a miniature trash sort, similar to the larger one they did last fall. Another attraction provided by the initiative will be a "bike-powered smoothie maker," said Hopkins.

According to the Facebook event, live music will be played throughout the festival. There will also be raffles and chances to win prizes that include a bike, UMass supplies and gift cards.

There will also be chances to do community service at the festival. The Facebook page states that origami made at the event will be sold to raise moncy for relief efforts in Japan, following the countries massive earthquake back in March. Also, the page encourages students to bring old clothes and take part in a clothing swap, with remaining clothes items being donated to the Amherst Survival Center.

The College of Natural Sciences will be on hand to talk with students about a potential masters program in

Board weighs in on Vt. plant

By William Perkins
Collegian Staff

The Vermont Yankee Nuclear Power Plant poses a threat to the health and safety of Amherst residents and, according to members of Amherst's Select Board, shouldn't be granted an extension of its license.

Last night, members of the board unanimously voted in favor of adopting a resolution that calls for opposing granting the plant a 20-year extension on its license after its 40-year license expires in 2012. The resolution also calls for the immediate cleansing of reactor sites at the plant if its license expires, and states that the energy provided by the facility should be replaced with sustainable and renewable power sources.

Board members voted in favor of the resolution at last night's meeting after hearing an oral presentation from residents Tom Lindeman and Richard Stein – a retired professor of chemistry at the University of Massachusetts – urging them to support it.

Lindeman noted that 51 municipalities near the site of plant have already supported something akin to the resolution, and suggested that Amherst should follow suit.

The power plant, which is based in Vernon, Vt., is owned and operated by the Entergy Nuclear Corporation. It is located approximately 30 miles from Amherst by air, according to Lindeman, and has been the subject of criticism by some Vermont residents and politicians, who believe that it should be shut down. In addition, the plant has also garnered increased scrutiny in the wake of the disaster at Japan's Fukushima Nuclear Power Plant.

The resolution adopted at last night's meeting also calls for having plant employees participate in the decontamination of site, if such an action occurs. It later states that strategies should be implemented to aid workers who would be affected by the plant closure.

Members of the Select Board noted at last night's meeting that they are in full support of proposals outlined in the resolution.

"I really appreciated this," member Aaron Hayden said of the resolution. "This is a good thing."

Additionally, Hayden introduced two additions to the resolution, which gained the support of his fellow members. The first addition calls for recognizing that a closure of the plant could increase the town's support of energy sources that are said to be unsustainable, while the second addition seeks to answer the first one – by noting that Amherst is already engaged in the process of replacing that power through means that are not said to be unsustainable.

Board member Diana Stein, who is not related to presenter Richard Stein, also expressed her approval of the resolution.

"I'm completely in support of it," said Stein.

Additionally, Select Board Chairwoman Stephanie O'Keeffe noted that the town reached out to state Rep. Ellen Story and state Sen. Stan Rosenberg to see if they support the resolution. While Story didn't reply to the town's inquiry in time, O'Keeffe said Rosenberg communicated his support of it.

Select Board members are slated to sign an approved draft of the resolution at their meeting next Monday.

Elsewhere last night, board members voted in favor of recommending several budgetary articles to go forward at next month's Town Meeting.

William Perkins can be reached at wperkins@student.umass.edu.

Veterans Writing Project helps soldiers, families cope

VETERANS from page 1

Russell during a panel to discuss veterans' writing project. "I feel like my time was wasted … It's hard knowing that people don't understand. Hopefully us getting our ideas and thoughts out, people will understand. It's just hard everyday. It's a battle everyday."

The panel, which was held on the evening of April 5, featured an explanation of the project's roots and aspirations and a presentation by best-selling author and editor of the book "Operation Homecoming: Iraq, Afghanistan, and the Homefront, in the Words of U.S. Troops and Their Families," Andrew Carroll. The book is part of the national "Operation Homecoming Project," which was sponsored by the National Endowment of the Arts [NEA], and Carroll played a key role in working on the project. NEA Director of Literature and the Operation Homecoming Project Jon Peede also spoke at the open forum held in the Reading Room of the Campus Center.

These men's efforts to have soldiers write creatively or truthfully were launched on a national scale, and, according to Rob Wilson, director of the Veterans Education Project and opening speaker at the panel, the work of Peede and Carroll have inspired some of the valley's local efforts to help veterans handle their experiences positively, such as the Veterans Writing Project. UMass Veterans Services made the arrangements to have Peede and Carroll speak.

Peede told the story of a poet and peace activist who was invited to teach at West Point. When her cadets went overseas to Afghanistan and Iraq, she had wished she could do something for them. Together with Peede, the poet whose name was not disclosed at the forum, decided to get soldiers to write about their experiences in the war, without making the works political, to help "people process what they were going through." The idea of these two poets getting together "at midnight to think about what the arts might offer world," said Peede at the event, essentially piloted the ideas of getting soldiers to write about their experiences behind both the national and local projects.

Carroll said that, during its initial days, critics of the Operation Homecoming Project were suspicious "it was an effort to promote the war."

"That's not it at all," said Carroll about this criticism. "It was about teaching people to respond creatively to their personal experience."

Carroll said he wanted to be a part of the Operation Homecoming Project because of its "human" factor – as it would give soldiers "the chance to talk about their experiences and give families a chance to talk about it too." Also, he said liked the idea because of its "historical" significance – gave individuals a chance to talk about war experiences themselves without a political filter going through it. Lastly, Carroll added that the project held "literary" importance – in the belief "they would discover some genuine literary talent."

"I believe they showed us [literary talent]," Carroll said of the soldiers who participated in sending their wartime letters to him for the Operation Homecoming Project. Over 12,000 pages were sent.

During his opening notes, Wilson also thanked Professor of Humanities at Hampshire College Robert Meagher, and gave Meagher the floor to speak about the importance of expression for the soldiers.

"Another truth that doesn't qualify as a truism is that wars are not over when they are over they leave behind wreckage and wounds," said Meagher. "Warriors bring their wars home with them. Not like a tan, but like a secret they wish they'd never been told."

An approximately 20-minute long excerpt of a tear-jerking NEA-sponsored documentary film was shown, which showed personal accounts of soldiers and their families members on how writing about their experiences helped them cope.

The panel and open forum ended with a question-and-answer session, in which veterans or family members of veterans were invited to sit at the front four microphones to discuss their experiences and answer questions from those in the audience, which was made up of about 30 individuals. Six individuals, two of them family members of veterans, rose to sit before the audience to answer questions that evening.

Individual coaching from experienced writers was available for veterans and their family members to share stories, and those who attended one or both of the two workshops had opportunities for publication in the Daily Hampshire Gazette. The final workshop for the spring took place in the Isenberg School of Management on Saturday, April 9, from 1-5 p.m., and it was led by Stephen Sossaman, a Vietnam veteran and retired Westfield State University professor of English and writing. The project may return next semester.

While Gagnon said she believed the workshop to be helpful to veterans, she said many of the veterans who attended the workshops are not veterans of the Iraq and Afghanistan war, but mainly those from the Vietnam War who had not recognized they had PTSD because of its taboo status during that war's immediate aftermath.

"[The Veterans Writers Project] is very beneficial," said Gagnon, who has been working with veterans in undergraduate and graduate programs for eight years. "Because, with PTSD, some veterans – not all, but some – things don't seem the same. In order to get their feet back on the ground and really focus, it is healthy for them to sit down and write about their experiences or write about what it's like to be home."

Russell, who has since retired a Staff Sergeant from the army since his deployment to Iraq, said that, in part because older generations were less inclined to share their emotional burdens and experiences, and in part because people expect him to be the same as before he left for Iraq, his relationships with friends and family members have "all been strained in one form or another."

"My parents and aunts just want me to 'forget and leave Iraq behind me,'" said Russell. "They want me to forget it and make it go away. They are the older generation that did not talk about things and kept to themselves. That is not me. I talk about my feelings and fears."

COURTESY TERRANCE RUSSELL

Terrance Russell, a retired army veteran, suffers from PTSD.

"My friends who knew me before my deployments do not find it easy, or rather hard to see that I have changed in such a large way to them," continued Russell. "They always expect to have 'high school' or 'college' Terrance to appear, and that Terrance is gone. Then, my new friends here in Massachusetts have to deal with the Terrance with bad dreams and fears of seeing trash on the road."

Although Russell finds it a struggle to get up each day and at times finds himself in tears or in need of being alone, he finds comfort in talking with those who understand and wishes more Americans could try to talk more with understanding. He also finds comfort in writing about his experiences and hopes that the book he is attempting to write will help other soldiers and their families.

Code of Student Conduct changes recommended

CODE from page 1

to reduce fee for BASICS (because of concern about the disparate effect of the current fee on students from low income families)," the commission's report reads.

Tower also noted that another recommended change would involve removing minor offenses from a students' record upon graduation. This change would allow students to apply for law or graduate school without fear that offenses like roughhousing in the hallway would carry over with the student's permanent record, said Tower.

The records that are wiped clean upon graduation – or after a student has left the University for two years, if that comes first – include any violations that did not "result in a student's expulsion, suspension, or removal from housing," the commission's recommendation reads.

Any violations that led to suspension or removal from housing "shall be expunged from the student's record upon graduation or five years after the date of the incident that resulted in the suspension, whichever is later," reads the text of the recommendation.

However, the recommendation continues, any violations that led to expulsion "shall be a permanent part of the student's record."

The last page of the commission's report calls for further action by University administration in developing an appendix for forms of sexual misconduct, violence and forms of discriminatory intimidation and coercion. The commission asks for "definitions of the behaviors; procedures/options for reporting (both to University officials and to law enforcement); procedures for responding; and on-campus and off-campus resources for victims, charged parties, friends and other supports."

Other recommendations to the Code include "changes in the composition, appointment process, and training of hearing boards" as well as "a new and greatly expanded section" on varying forms of assault, according to the first page of the recommendation report.

Suggestions and comments on the Commission's commendations can be emailed to screport@stuaf.umass.edu by tomorrow, Friday, April 22. The full report by the Commission can be read at http://www.umass.edu/stuaf/cscreport/.

Art exhibit drives dialogue

BORDER from page 1

and had a pistol held to her head for questioning authority.

A mixed sound recording of helicopters flying over Rivas' home, the mechanical hum of construction noises and Rivas' singing emanates from behind the fence, added to the illusion that construction is underway while setting an eerie tone.

At the exhibit's reception Wednesday afternoon, D'Ignazio explained that the sudden appearance of the fence mirrors how, one day, a barrier was driven down the center of the Native American community in southern Arizona and Mexico without the consent of residents. She said that by inserting something inconvenient in a heavily trafficked area of campus, it will force people to stop and ask questions.

"I don't usually ask permission," D'Ignazio joked at the exhibit's reception Wednesday afternoon. D'Ignazio was approached a year and a half ago by Loretta Yarlow, director of the University Museum of Contemporary Art, and asked to make a work of art for campus. She explained that she has family in Tucson and first saw the border a year and a half ago.

"It feels like [this] shouldn't be happening in the United States," she said.

Jean S. Forward, director of the certificate program in Native American Indian studies, which organized a panel talk following the reception, said she hopes that "a public art exhibit like this will encourage dialogue on campus about having a fence through a native community that has been on that land for thousands of years."

Eva Fierst, Education Curator at the University Museum of Contemporary Art, explained the construction of the project.

"We want to give the illusion that UMass is putting up a fence," said Fierst.

Designed to resemble the fence posts of the actual border, caps were placed on the poles which currently act as a barrier to cars on the bike path. Dirt was sprinkled around the base of the posts to further add to the effect.

The fence is staggered in three parts to allow foot traffic while still giving the impression of a fluid structure from afar.

Fierst explained that the original proposal to erect a fence stretching east to west across campus dividing it into a north and south was not approved because of the security implications and the disruption it would have to campus life.

"Site-specific installations like this are ephemeral, which means they're only there once for a short time and just like so many public art works are nowadays it won't be repeated," Fierst said, describing the exhibit as a mixture between art and social activism.

JAKE HALPERN/ COLLEGIAN

A barrier between the Campus Center and parking garage symbolizes the U.S.'s southern border.

Fierst said the biggest expense of the project was the screen used to print the photographs. Aside from that she credited the good will of UMass for allowing the use of sound and providing the fence, permits, sand bags and cones.

Rivas said that the exhibit was more important in the global sense of how these borders continue to divide people.

"We need to be a better society and resolve issues of borders. The United States needs to stop intervening in 'border issues' as they call it," she said.

"We have family, friends, ceremonies and sacred places on both sides of the fence. We are so connected to the land that we need to go across that border without restriction," said Rivas.

The exhibit was organized by the University Museum of Contemporary Art, which is located in the basement of the Fine Arts Center. Wednesday's opening will be followed by an Indian discussion starting at 10 a.m. on Saturday at the Curry Hicks Cage and a performance at the project site from Tiokasin Ghosthorse, master of the Red Cedar Lakota flute.

Teaching about sustainability

EARTH DAY from page 1

sustainability initiative that may soon be added to the University, said Hopkins. While nothing is official yet, Hopkins is hopeful progress can continue to be made and wants the word to begin to spread about the potential program.

Hopkins said that Gardenshare has hosted the Earth Day festival in past years, but that this event will hopefully be the largest. For her, the most important aspect of the event is that it can raise awareness of how students can become involved with sustainability.

"Some people have this conception of sustainability that 'Oh, it's just hippies,' or 'Oh, it's just tree huggers,'" she said. "But … sustainability comes from so many areas of campus."

Earth Day is celebrated each year on April 22 to commemorate the anniversary of a major environmental event held on that day in 1970, said EarthDay.org.

"Earth Day 1970 capitalized the emerging consciousness, channeling the energy of the anti-war protest movement and putting environmental concerns front and center," the website states. "We invite you to be a part of Earth Day and help write more victories and successes into our history."

Earth Day festivities at UMass begin at 11 a.m. and end at 3 p.m. on the library lawn.

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

THURSDAY, APRIL 21, 2011

"All truths are easy to understand once they are discovered; the point is to discover them." — Dr. Seuss

EDITORIAL@DAILYCOLLEGIAN.COM

A long-term price to pay

As graduating seniors prepare to walk this May, many of them step toward an uncertain future. With the Bureau of Labor Statistics pinning the unemployment rate at 8.8 percent as of March, the job market can be a daunting place. This fact might be easier to deal with were many of those graduates not strapped with the burden of student loans. Student loan debt, which has outpaced credit card debt for the first time last year, is likely to top a trillion dollars this year, according to the New York Times article, "Burden of College Loans on Graduates Grows."

Melissa Mahoney

This grim future begs the question, is a higher education worth the years of coming payments and the potential postponement of a first home, starting a family and future savings?

According to the College Board, it takes 15 years from the time of enrollment before the income from a bachelor's degree combined with net student loans begins to out-earn what a high school degree would get you. After those 15 years, you may finally see your full salary, but that doesn't necessarily mean you will even have a high-grossing occupation.

In fact, some of the biggest names in modern technology were college drop-outs. Sir Richard Branson of Virgin, Dean Kamen inventor of the Segway, Michael Dell of Dell computers, Bill Gates of Microsoft and Steve Jobs of Apple never earned a college degree.

Yet, these individuals are valued in the billions. Peter Thiel, co-founder of PayPal, hedge fund manager and adventure capitalist, recently created a program called "20 Under 20." The program, which received 400 applications from youth under 20-years-old across the globe, will choose the best and most promising 20 individuals to receive $100,000 to drop out of school and create their own business instead. According to Thiel, while the press has found this highly controversial, "plenty of students, their parents and people in tech have been wildly supportive."

With individuals like Bill Gates and Steve Jobs making a killing every year, is it truly necessary to have a degree?

The Princeton Review ranks business administration and management/commerce as the number one most popular bachelor's degree. Students seeing college merely as a means to a successful end result may choose this major as a surefire way into the business world. After all, any $100,000 dollar investment like a college education should pay off, right? Right?

Not necessarily.

I spoke with a couple students to keep touch with how the UMass community feels about earning a four-year degree, despite acquiring loans. Meridith Vaughn, a sophomore in the Isenberg School of Management says, "It's all about the internships."

Taking business classes does not necessarily prepare you for the hard and fast world of real business.

Stefano Perti, a sophomore marketing major, agrees with this statement. "Our classes are only worth the cost of the books we have to buy. If you want to know how business works, the best way to do it is to get an internship [and] get some real practice," he said.

The skills necessary to succeed – and to pay off the average $24,000 of debt, according to the Project on Student Debt – cannot really be taught in the classroom.

Instead, a student must attempt to find an internship, often highly competitive, to earn those skills. With individuals like Bill Gates and Steve Jobs making a killing every year, is it truly necessary to have a degree? Why not delve into the business world straight away, saving vast amounts of money and gaining the hands-on experience that employers are looking for?

However, there are definite benefits to earning a degree. According to the College Board, the median earnings of bachelor's degree recipients working full-time year-round in 2008 were $55,700, which is $21,900 more than the median earnings of high school graduates. Perhaps then the question is not whether a higher education is worth the expense as a whole, but rather if it is worth how much we pay for it. With the price of education at the University of Massachusetts and Chancellor Robert Holub's recent announcement of a $28 million deficit between funding and expenses, the gap will most likely to be made up by increased fees and the state of student debt can only worsen. Coupled with an uncertain economy and any future debts that might arise, we must ask ourselves when the education that we hope will someday put us in the green, inevitably puts us permanently in the red.

Amherst bars should turn down the loud sounds

I'm not exactly sure when it became that when at a bar enjoying a drink you shouldn't have to listen and talk to the person sitting next to you. This is a notion I am frustrated with. You go to bars to be with friends – it's too bad the music is too loud for you to hear what they are saying.

Mark McDonough

Anyone staggering the streets of Amherst on a Thursday, Friday or Saturday night will notice the all-encompassing noise drowning all thoughts of guilt, exam preparations and stories of your date's latest encounter with the University of Massachusetts Minute Taur (the one story you've heard quite enough already).

Hell-bent on convincing you their establishment is the most entertaining of the strip, the bars crank their stereos to "11" and happily encourage barflies to have another round. Were any UMass student to throw a party half as loud, the police would undoubtedly arrive to hand out the residents' a summons to court for violating the town noise bylaws..

Being of the opinion that the only time college students ever really think about anything important is in the leisure hours, my friends and I rack our brains every weekend over the important question of where to drink and talk – a common complaint is "no, that place is too noisy," but every place is.

The options are not promising. There are ways to drink and talk: cafes and weekdays. Weekdays might work if our school work didn't keep most of us chained to desks (guilt, worry and desperation all make good chains) every night. I don't want to downplay cafés and their use for people who sit around drinking coffee with French names and discussing the themes in Marcel Proust's "In Search of Lost Time," but it's really not what we're looking for.

The bar room was once a source of all truth for a community, where men could discuss philosophy, politics and religion. A revolution was never worth having that didn't begin in a pub. More than that, it was a place where people sang together, they didn't gather to listen to what seems to be some rapper/rocker's attempt to destroy your eardrums. The only place the average UMass drinker enters on a Thursday, Friday, or Saturday evening that has music at a reasonable volume is Antonio's.

Hell-bent on convincing you their establishment is the most entertaining of the strip, the bars crank their stereos to '11' and happily encourage barflies to have another round.

The University is an ideal place for alcohol-fueled talks on the meaning of life, meaning of death, means of production, mean people, harmonic mean or the Blue Meanies, a group of blue-colored, music-hating cartoons. Alcohol is the perfect substance for any chat session, most especially because it's a relaxant and brings out the truth in most people. Plenty of students attempt meaningful discussions while smoking joints, and I respect that. But those conversations all too often tend to be about how they think marijuana should be legalized. Besides, there are still people on this campus who prefer a stout to pot.

Surely, it could be proposed that students get enough of thinking through academic matters and other affairs during the week, and that they would simply like to relax to the blasting noise of a stereo dying, but I don't think so. There are college students who actually enjoy talking.

This brings up another painful subject – the academic who does not enjoy academic things. I can be just as snobby as the people in berets discussing Proust when dealing with people who care nothing for any kind of decent conversation. There are students who don't care for their major or anything that they might do in a class or find in a book, but instead are here to party, others to get a better job and more to appease mommy and daddy. If Jersey Shore interests while history fails to, if Lady Gaga excites while mathematics leaves people cold, if gossip magazines are of much greater interest than literature, then it is no wonder there's no need to speak in a bar. In fact, there's little need to speak ever.

The government actually has limited the volume that a bar can blast its music with noise bylaws, but what's needed isn't more government intervention because some people want noise, but a bar, a lone ranger, that chooses to deviate from Amherst center's noisy and conformative strip of sound by turning the noise down. When that happens and one of these bars realizes that there are people who want to hear their date's laugh, friends' talk or own humming, I hope to be there, relaxed and listening.

Mark McDonough is a Collegian columnist and can be reached at mamcdono@student.umass.edu.

You make me hot. No, literally. I'm melting.

Seven things to do before you graduate

1) Ask a random freshman to swipe you into the DC
2) Take a dip in the campus center pond; take home a duck
3) Your laundry
4) Tell your professor how hot you really think they are
5) Write for the Collegian, or at least a letter to the editor
6) Go have a last hurrah at the grad lounge, or 10
7) Stay classy

Carell to play Scott in only two more episodes

By Chris Shores
Collegian Staff

How can we possibly say goodbye to Michael Scott?

For seven seasons, the star of NBC's "The Office" has been both the world's worst and best boss. Scott (Steve Carell) has become the king of the phrase "That's What She Said." He's taken audiences through some of the most awkward television moments in the history of primetime comedy. And in two episodes – a week from today – he will walk away from Dunder Mifflin Paper Company and "The Office."

Scott is going to Colorado to live with his fiancée Holly Flax (Amy Ryan). Like his character, Carell is leaving the show on his own terms.

Last June, he told Entertainment Television, "I just think it's time ... When I first signed on I had a contract for seven seasons, and this coming year is my seventh. I just thought it was time for my character to go."

While Carell has been in his fair share of movies – including "The 40 Year Old Virgin," "Little Miss Sunshine," "Evan Almighty," "Get Smart," "Date Night" and "Dinner For Schmucks," to name a few – it is still hard to imagine him excelling in any one role to the degree that he did on "The Office." It's as equally difficult to fathom watching the show without him.

During the past seven seasons of "The Office" we have seen the highs and lows of Carell's character. The current season has been a good one for the man, as the writers and producers prepared for his departure by setting up a reunion – and then engagement – with nerdy but lovable human resources representative, Flax. Dunder Mifflin is doing better too, escaping its financial crisis ever since Sabre Corporation purchased it last season.

But the show also showcased Scott as man who desperately wanted a family but could never stay with a steady girlfriend. Scott had several tumultuous relationships during "The Office," including an affair with his boss Jan Levinson (Melora Hardin) who moved in with Scott and was subsequently arrested for domestic violence. There was also the time when Scott angered his girlfriend Carol Stills (Steve's real-life wife Nancy Carell) by photoshopping himself into a Christmas card picture of Carol and her children on a ski trip.

Then there was the day Scott drove his rental car into a lake because he misunderstood the GPS' directions. Or the time when he traveled to New York City, convinced he would receive a corporate position when he unknowingly had no honest shot.

For many a moment, Michael Scott was the most pathetic character on television. But more often than not, he was the most endearing. What other boss throws a birthday party for every single employee or kicks off a company-wide weight loss campaign by dressing up as his offensively obese character "Michael Klump?" Who could forget the time when Scott posed as "Prison Mike" to teach his employees about life inside prison? Or the time when he introduced a merging branch to Scranton with the "Lazy Scranton" orientation video, a parody of an SNL Digital Short.

As last season drew to a close and rumors of Carell's departure began to swirl around the Internet, "The Office" seemed on its deathbed. Ratings were down for the show, as the sixth season finale attracted nearly 1.5 million viewers less than the finale two years prior (6.6 million and 8.07 million, respectively). But the show has returned to form this season and last week's episode had 7.871 million views, according to the website "TV by the Numbers." However, what will happen after Scott leaves is impossible to predict.

"The Office" brought in Will Ferrell to play new manager Deangelo Vickers, who premiered on the show last week and will continue during the next two goodbye episodes to Scott. But Ferrell won't be taking over the position permanently as he is only in a four-episode arc playing the character.

So who will take over for Michael Scott? While the show centers on the workplace interactions of an ensemble, no one on the cast shines brighter than Carell. A majority of the funny, awkward plots and memorable lines come from him. It remains to be seen if a new manager – or if an increased role of a current character – will be able to capture the attention of the general television audience in the way Scott did.

Scott's goodbye has already begun as he came to terms with his departure in the most recent episode. In tonight's episode, "Michael's Last Dundies," he will train Vickers on how to run the Dundie award show, one of his many company creations. A week from today, there will be a special 50-minute episode to say goodbye to Scott. Then the cast will have to make do without him for the final three episodes of the season.

Whatever the fate of "The Office" is without its star, it has been an incredible run for Scott – and for Carell. He was cast into the show as an actor known for his skits on comedy shows and the start of a budding movie career – and exits as one of the most notable comedic actors in America.

Michael Scott will be missed, but the employees of Dunder Mifflin, the cast of "The Office" and fans of the show must surely all agree on one thing: he is welcome to come again anytime he wants.

That's what she said.

Chris Shores can be reached at cshores@dailycollegian.com

Steve Carell will appear as Michael Scott, the character he is arguably the most well-known for, in only two more episodes of the popular NBC comedy "The Office."

Seger still legendary

Rock and Roll Hall of Famer Bob Seger proved that he can maintain his status as a rock legend despite his age last Friday in Boston.

By William Perkins
Collegian Staff

Last Friday, Bob Seger proved that he's still got his Night Moves.

The legendary Detroit-based rocker showed when he performed in front of a packed crowd at the TD Garden that despite his age – a respectable 65 – he has still has a lot of energy left. And quite a bit of talent, too.

Playing a roughly two-hour set, which began with "Roll Me Away" and ended with "Rock & Roll Never Forgets," Seger barely let his age show. Though his once brown hair appeared to be a silvery-white, the 2004 Rock and Roll Hall of Fame inductee showed no real signs of fatigue – he took control of the stage from the get-go.

Seger played a slew of his greatest and most revered hits. Tunes played included "Fire Down Below," "Mainstreet" and "Old Time Rock & Roll," the 1979 hit that has become one of his most recognized songs.

Additionally, Seger delivered impressive performances of "We've Got Tonight," which he dedicated to his daughter in honor of her soon-to-be 16th birthday, and "Turn The Page," his '70s hit that regained fame when it was covered by Metallica in the late 1990s. He also awed some in the crowd while playing a rendition of "Travelin' Man," which transitioned into "Beautiful Loser," a performance that conjured up memories of his noted "Live Bullet" album of 1976.

Seger also played a few lesser-known tunes during Friday night's show. He gave a performance of "Gets Ya Pumpin'," a song which he noted was written in 1971 that went unreleased until 2009. He also played a crowd-pleasing edition of "Shinin' Brightly," a track off his 1980 "Against the Wind" album which he said he had never performed live until his current tour.

Seger also mixed in a few renditions of cover songs he's recorded during his tenure. He delivered solid performances of "C'est La Vie" and "Real Mean Bottle" – songs originally performed by Chuck Berry and Vince Gill, respectively.

And, judging by audience members' sentiments throughout the performance, Seger didn't disappoint those who were in attendance for the show.

Attendees, who were overwhelmingly middle-aged, participated in and commenced a number of sing-alongs during the duration of the show – particularly during two encore performances, when Seger delivered great renditions of "Against the Wind" and "Hollywood Nights," then "Night Moves" and "Rock & Roll Never Forgets," respectively.

Seger, however, did hint during a few instances in his performance that his voice might no longer be as powerful as it once was. But he still delivered commanding performances throughout most of the set – and let his distinctive vocal style shine through.

Seger, though, didn't single-handedly make each performance. Backed by members of the Silver Bullet Band, some of whom have been playing with him for close to 40 years, Seger had exemplary musicians backing him up on vocals, piano, guitar, saxophone, drums, bass and a whole host of other instruments.

Seger's stop in Boston was part of his two-month, 22-city tour. He began his tour in late March in Toledo, Ohio, and will continue playing until late May, when his tour will come to an end in Cleveland.

Seger's stop in Boston was reported to be sold out.

William Perkins can be reached at wperkins@student.umass.edu.

'Thrones' lives up to HBO reputation

By Kevin Romani
Collegian Correspondent

"It's not TV. It's HBO."

The premium cable television network has been running this slogan for years now, and it continues to live up to its reputation. With its dedication to story, character and high production values, HBO's (Home Box Office) original series continue to redefine television. HBO's new Sunday night series "Game of Thrones" is no exception. The easiest way to say it is that HBO has done it yet again.

"Game of Thrones" is a medieval fantasy drama based on the best-selling series of novels "A Song of Ice and Fire" by George R.R. Martin. Seven families make up the kingdom of the mythical Westeros, which is lead by King Robert Baratheon (Mark Addy). At the start of the pilot episode, titled "Winter is Coming," the King has just lost his chief advisor and suspects that there was foul play involved in his death. Baratheon asks his old friend and ally Eddard "Ned" Stark (Sean Bean), Lord of Winterfell, to replace his late advisor. Fearing that other families are vying for control of Baratheon's Iron Throne, Stark agrees in order to investigate his suspicions.

A simplistic way to describe the style of "Game of Thrones" would be "The Lord of the Rings" trilogy meets "Braveheart," but in television format. This first episode only hinted at elements of fantasy that are similar to those from "The Lord of the Rings." The opening of the show offered brief glimpses of creatures known as "White Walkers." Later in the episode, it is revealed that these Walkers have not been seen in Westeros for thousands of years. It is reasonable to assume these creatures will find their way back into the main narrative. Certain pieces of the production design and art direction both provide an element of fantasy. With incredible detail and eye-catching color assigned to the sets, the scenery helps the viewer escape into this fictional world.

The major genre that played out in this pilot episode, however, was the drama. Like "Braveheart," a major theme of this series will be the lengths people go to gain power in a middle age backdrop. Several characters believe that they, or someone else, are the rightful ruler of Westeros. Many of these disagreements and conflicts exist within the same family. It is similar to "The Godfather" in that regard. Family members lie, manipulate and murder – all in the first episode. It will be interesting to see how far these characters' jealousy and revenge seeking will take them throughout the series.

Film fans are already familiar with the strong supporting performances of Sean Bean. He left a memorable mark in "The Lord of the Rings: The Fellowship of the Ring" as well as in the James Bond film "Goldeneye." It's nice to finally see the actor in a leading role of his own. He is perfect for the character of Ned Stark. His ruggedness and presence are ideal for a character that looks to be the hero of the series. The rest of the cast consists of mostly unfamiliar faces, but all do a fantastic job in their performances. The crew of "Game of Thrones" also performed above and beyond that seen in most television work. The cinematography, costume design and musical score were all appropriate for this style of storytelling.

In comparison to other pilot episodes, "Game of Thrones" is not among the greatest of all time. It does not have the action and excitement the "Lost" pilot had, or the mystery and intrigue of the first episode of "Twin Peaks." These series needed to leave an incredible impression in their initial airing in order to grab the attention of viewers instantly. "Game of Thrones" was not trying to do this because viewers already know the quality that HBO offers. It did not need to be remarkable in order to be successful. It instead offered a slower-paced pilot that laid the foundations of what is sure to be a great series. The first episode let the viewers take their time in learning the characters and familiarizing themselves with the geography of the fictional setting.

The most exciting moment from the episode was its ending. This may be an indicator that each episode will end with a cliffhanger to entice the audience to return for the following week's episode.

"Winter is Coming" was a promising first episode. The end credits were followed by clips from episodes that will air in the coming weeks, and it looks to be filled with exciting action and compelling drama. "Game of Thrones" is sexy, sharply written and engaging. It airs at 9 p.m. on Sunday nights on HBO and will do so for nine more episodes. The critical reception and high viewership of the first episode have already led to a second season pickup.

Kevin Romani can be reached at kromani@student.umass.edu.

Sean Bean, of "Lord of the Rings: The Fellowship of the Rings" and "Goldeneye" fame, plays the Lord of Winterfell Eddard Stark in one of HBO's newest shows, "Game of Thrones." The show is based on the series of novels "A Song of Ice and Fire" by George R.R. Martin.

Former pro Kline rebuilds career at UMass

By Herb Scribner
Collegian Staff

In 1988, Holland and U.S.S.R. competed in the final of the European Football Championships in West Germany. Dutch striker Marco Van Basten scored a heart-stopping goal for the Oranje and led them to a 2-0 victory over the Soviets.

Miles away from the final game in Ljubljana, Slovenia, young Miha Kline watched Basten score in awe. The moment would forever be ingrained in Kline's mind.

"From then on I knew there was nothing I'd want more than to one day be like [Basten] and play at the highest level," said Kline, 23 years later.

Kline didn't let the moment slip from him, as he pursued soccer as a way to match Basten's remarkable skill on the pitch. In 2011, Kline is a graduate student at the University of Massachusetts and has helped coordinate the upcoming Supercuts SoccerFest 2011 event, scheduled for April 30.

Part of his work for the Isenberg School of Management is connected with the sport he competed in for so many years.

"It's something for the community, it's a completely grass-roots event that brings together people that love soccer, love being outside and being as active as possible, and promotes a healthy way of life," Kline said on SoccerFest.

Before he made it to UMass, ISOM or SoccerFest, Kline competed professionally in Europe for the world's sport.

Rise to the pros

Kline's soccer roots began with his father who also played the sport. However, after his father dropped "nogomet," which is Slovenian for "soccer/football" to study education, the elder Kline moved to Ljubljana, where Miha would be born.

At a young age, Kline immediately became involved with the sport competitively in order to meet that of his favorite player, the aforementioned Basten.

"When I was a kid all that mattered to me was a soccer ball and winning ... and I played with my friends for hours and hours every single day after school and until the day ended. I absolutely loved every minute I spent on the soccer field," said Kline.

His first experience for a club was at the age of eight, when he competed for his local town club. He stayed with the club until he was 18, and even captured the National U-16 Championship in 1996 for Slovenia.

The success he found in his hometown also elevated him to his first professional team, as he signed a contract with NK Ljubljana at the age of 19 – a team that competes in the top league of Slovenian soccer.

"This was a great opportunity for me, because the team was filled with present or former National Team players and some of the best players that played the first division soccer for many years," said Kline. "Having so much experience around me was invaluable for me developing as a player, getting more mature soccer-wise and learn about playing on a totally different level from some of the best."

According to Kline, he progressed quickly in the next three years with the club. He progressed so much that another Slovenian team, NK Dravograd, which featured a coach that Kline called one of the "best coaches that ever coached on our grounds" in Mihajlo Petrovic, signed him.

Under Petrovic, Kline said he learned more in one season than he had in the previous 10 years of his career.

"Looking back and thinking about it, it must have been one of the best seasons in my career," said Kline. "I was only 23 but I led a group of guys that were mostly even younger than me and in that season we made a lot of surprises as underdogs."

As an underdog and a part of Dravograd, Kline experienced what he called the turning point of his career. In the second leg of the final of the Slovenian Cup, Kline dished out three assists en route to the win.

The three assists did not go unnoticed, as three other Slovenian teams put in offers for Kline in the offseason. He signed with NK Domzale, a team he played with for two seasons. His team reached second place in the National Championship in both seasons, which inspired both the national team and Russian Premier League squad, FC Shinnik, to have interest in Kline. Kline didn't hold off from signing with Shinnik when the offer came through.

"I remember calling my dad ... and telling him about the contract and I will never forget his words," reflected Kline. "[He said] 'I'm really proud of you, my son, you've worked really hard for this and you truly deserve this. But, never allow yourself to forget about your education and your future ... therefore, read, read, read.' Imagine telling that to a kid that just signed his first [professional] contract?"

Kline embraced himself in the Russian culture and language. He explained that he made numerous new friends and became very accustomed to the Russian way of life.

"I learned about many really great aspects of playing abroad, being sort of famous in town," said Kline. "But [I] also experienced many downfalls about being a foreigner when things didn't go as well as we and fans hoped for. "

His next move was to Greece to play in the Super League to compete for Veria FC. Right from the beginning, Kline noticed a culture change. Even 23 years later, Kline explained that playing and living in Greece was extremely short of ideal. Additionally, he said his experience was anything but pleasant.

"The country is in real chaos, nothing is done the way it is supposed to and also some of the people running the club knew more about everything but soccer," said Kline.

On a competitive level, Kline was also smitten about how the league was nothing like he imagined it to be.

"Except [for] the top three teams in Panathinaikos, Olympiakos and AEK, soccer was really terrible with very few passes and players simply just playing hard and fighting on the field," said Kline. "After the torturing season was over, they finally agreed to let me go."

Veria would be the last professional team Kline would ever play for.

Rebranding Kline

Though Kline signed a pre-contract with a Holland team, SC Heerenveen, the results of a series of medical examinations kept him from ever signing an official contract. According to Kline, the first examinations revealed something was wrong with his heart. Upon a second examination, a heart condition was confirmed. Kline said that a Dr. Myshali from Israel operated on him.

"He did an awesome job, and today I can do anything without limitations," said Kline.

Still, Kline wasn't forgetful of the pain he went through after he was told for the first time about his condition as it ripped him away from his career.

"Just like that, in a couple of hours, my career ended and my life twisted upside down," said Kline. "I was ... completely out of life for almost six months, all I could do was lie in bed and walk around a bit. [I] lost more than 40 pounds and all the muscles.

"When I tell people about the misfortune that I had that caused me to end the career and doing something I absolutely loved doing, they always feel sorry for me or something like that," Kline added. "Don't get me wrong, I sure miss playing competitive soccer as hell, but on the other hand, I honestly can say the two and a half years after the surgery have been simply the best years of my life."

While Kline knew he could never play professionally again, he went out to try and change the way he connected with the sport which included rebranding himself.

"When you're forced to lie in bed for all that time, barely able to move, you have a lot of time to think about things, past experiences, future goals and wishes," said Kline. "That is when I kind of realized that as soon as I was back on my feet, this is what I wanted to do with my life moving forward.

Within a short amount of time, Kline found his way to UMass as a member of the Isenberg School of Management this year. After his nine months, Kline is thrilled that he made the decision to come to the University as it has landed him an internship at IMG Academies.

Kline didn't try to compete for the Minutemen soccer team due to age rules and he didn't try to get back into the professional leagues because of his medical history. Instead, Kline focused on reinventing himself and continuing to align himself with the sport that he adored ever since Basten's goal 23 years ago.

Minutemen set for Gillette starting 2012

FBS from page 1

Joined by UMass Athletic Director John McCutcheon, MAC Commissioner Jon A. Steinbrecher and Robert Kraft, owner of the New England Patriots and Gillette Stadium, Holub discussed the financial and logistic ramifications of the move.

"We have looked at all aspects of this transition to the FBS very carefully and we believe, after an initial investment and, in a very few years, we will be using less funds from our general budget to support athletics than we do now," said Holub.

Over the next two years, UMass will be in a transitional period and its full membership with the MAC will be contingent on home attendance and its adherence to scholarship and scheduling requirements, said Steinbrecher.

According to McCutcheon, UMass will play its entire home schedule during the 2012 and 2013 seasons at Gillette Stadium.

"We do want to do some improvements in our stadium on campus," said McCutcheon. "There's a chance that we could move one or two games back there when it's in a position where we can host [Division] 1-A caliber games. The primary home for UMass football for the foreseeable future, I think, is going to be here at Gillette Stadium."

Involvement in the FBS will require UMass to average an attendance of 15,000 fans per home game. McGuirk Stadium, the home field of UMass football since 1965, holds 17,000 fans at full capacity.

Although McCutcheon did not rule out the possibility of playing a home game at McGuirk Stadium in the 2012 season, he does believe it is unlikely without renovations to the current facilities.

"To compete adequately at the FBS level, we need to have adequate training facilities on campus," said McCutcheon. "That will be the focus of our fundraising efforts over the next several years. By the 2014 season, we hope to have in place on campus a new training facility for football that will be on par with anybody in the conference and several across the country."

The deal to make Foxboro the Minutemen's new football home was made with Kraft, who said he is just as interested in benefiting UMass as profiting himself.

"Obviously, if we attract crowds similar to [those that] would go to an NFL game, that would work out well for everybody," said Kraft. "That's why we're doing this. To try to help UMass become big time, without the University having to invest in the capital assets to be able to play big time."

McCutcheon added, "We need to sell tickets, we need to generate more income from sponsorships and we need to schedule smart with our [non-]conference games and generate income revenue from guarantees and those are really the primary income sources that will make this [work]."

UMass will begin playing a full MAC schedule in 2012, but will be ineligible for a conference title or bowl consideration until 2013. It will also not be eligible for postseason play during the 2011 season.

Currently, the MAC has five different bowl agreements through the 2013 season in The Little Caesar's Pizza Bowl, GoDaddy.com Bowl, uDrove Humanitarian Bowl, BBVA Compass Bowl, Ticket City Bowl (2012) and the New Mexico Bowl (2013).

The MAC also has a national television contract with ESPN that requires a minimum of 15 regular-season games be played in addition to the MAC Football Championship Game.

With the addition of UMass, the MAC has 14 members in its football conference.

UMass will be required to schedule eight games against conference opponents, including six games inside its division and two games outside of it. According to Steinbrecher, divisional alignments have not been determined yet, but will be discussed at the league's "spring meetings" at the end of May.

As part of the agreement, UMass will schedule four games for men's and women's basketball against MAC opponents.

UMass will play its 11-game regular season schedule in 2011. The potential is now open to add another game against an FBS foe but, according to McCutcheon, it is unlikely it will happen this late in the offseason.

As part of the NCAA requirements, UMass will increase its number of football scholarships from 63 to 85. According to Title IX, that means more scholarships will need to be given towards women's athletic programs.

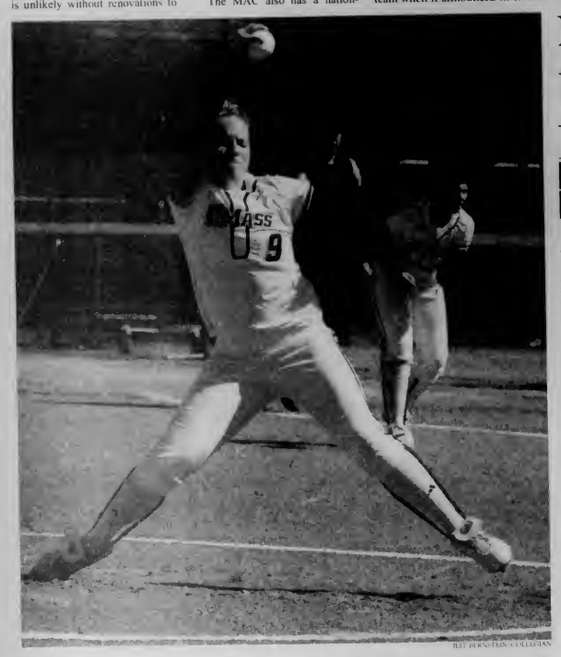
Holub is confident that, eventually, the move will end with the university spending less funds from its general budget to support athletics.

"Obviously, we get more revenue from the MAC than the CAA, so we're doing things on a comparative basis," said Holub. "What things will look like in five years in the conference that we're in and what things are going to look like in five years in the MAC. Doing that comparison, we feel that [with this move] we will be contributing less from campus funds to athletics than we do now."

Dan Gigliotti can be reached at dgigliot@student.umass.edu.

MAXWELL SPARK/COLLEGIAN

Massachusetts tailback Johnathan Hernandez rushes forward during UMass' game against Michigan last year. UMass officially became an FBS team when it announced its transfer from the Colonial Athletic Conference (CAA) to the Mid-American Conference (MAC).



JEFF BERKSTEIN/COLLEGIAN

Junior starting pitcher Sara Plourde delivers a pitch against Dartmouth in a game earlier this season. The Minutewomen have won nine straight behind Plourde's 16-10 record and 1.33 ERA.

Mayne's blast carries UM over UConn, win streak extends to 9

By Steve Levine
Collegian Staff

UMass	2
UConn	0

The Massachusetts softball team just won't stop winning.

The Minutewomen extended their winning-streak to nine games on Wednesday, defeating non-conference opponent Connecticut, 2-0, behind Sara Plourde's complete game shutout and Stephanie Mayne's two-run home run.

After struggling in the start the season, UMass (18-14, 9-3 Atlantic 10) is playing up to preseason expectations as of late, thanks in large part to Plourde's nearly unhittable pitching. Plourde's complete game shutout over the Huskies (17-20) was her ninth complete game in as many starts, recording an 8-1 record.

Both Plourde and UConn's starter Ali Adelman looked strong early on, with both holding their opponents scoreless through the first two innings. Adelman worked through a bases-loaded jam in the top of the second, but could not get any run support in the bottom half as Plourde struck out the side.

The Minutewomen broke through in the top of the third, when freshman Lindsey Webster (2-for-2, two walks) led off the inning with a single. After moving to second on a sacrifice bunt, Mayne crushed Adelman's 0-2 pitch well over the right-center field fence for her fourth home run of the season, putting the Minutewomen up, 2-0.

"I don't know how many balls she fouled off before she hit that home run," said UMass coach Elaine Sortino. "When she [finally] got that ball over the plate, [she hit] a monster shot. It would've been a double-fencer at the UMass Softball Complex."

The two runs were all UMass would need, as Plourde cruised to her team-leading 16th victory, giving up three hits and no walks while striking out 13. Although Plourde has looked untouchable recently, Sortino has seen better from her All-American pitcher.

"She's honestly starting to hit her stride," said Sortino. "She's nowhere near where we want her to be yet. She's getting a little better each day and there's still room for her to grow."

Despite all the recent wins, the Minutewomen would like to see their offense get hot. During its current nine-game winning streak, UMass has won five of those games by three runs or less. Although the Minutewomen stranded 10 runners on base against UConn, the opportunities were there and Sortino explained that her offense is starting to come around.

"We created a lot of opportunities that we couldn't finish," said Sortino. "We're starting to have better at bats, and we're taking pitchers deeper in counts and getting more aggressive. All of those things are starting to show up and this is the time, at the end of the season, where [it's most important]."

The Minutewomen were the preseason favorites to win the A-10 conference. With its extended surge, UMass currently are tied with Temple (18-18, 9-3 A-10) for the second spot. Fordham (28-16, 11-3 A-10) remains in first.

Sortino attributed her team's early season struggles to a number of things, including a very difficult non-conference schedule, a young team and a number of injuries. Following the UConn victory, UMass is healthy – except for Katie Bettencourt's injury-related absence – and using its early season struggles to its advantage valuable experience.

"I really thought from the beginning that it was a matter of time," said Sortino. "I don't mean to be cliché, but as tough as it was to start, we knew that if we stayed focused on what we needed to do, that we'd be hanging around at the end [of the season]."

The Minutewomen return to action on Thursday when they host Fairfield at 5 p.m. for the first game of a 12-game homestand.

Steve Levine can be reached at slevine@student.umass.edu.

UMass splits two contests, lose in Beanpot

By Eric Mansfield
Collegian Staff

UMass	8
CCSU	3
UMass	0
Harvard	1

After a blowout loss to Connecticut on Monday, the Massachusetts baseball team bounced back with an 8-3 win at Central Connecticut State on Tuesday.

The Minutemen (11-18, 5-4 A-10) looked to have their bats' stay hot on Wednesday, when they traveled to Brookline, Mass., to play against Harvard in the first round of the annual Beanpot tournament. The offense sputtered, though, as UMass lost the pitcher's duel, 1-0.

The Minutemen couldn't carry that success at the plate over to the first round of the Beanpot, however, as a pitcher's duel broke out while taking on Harvard at Northeastern.

Charlie Benson got the start and received the loss for UMass, going eight innings, allowing one run, scattering nine hits while walking three and striking out seven.

Neither Harvard nor UMass sustained any sort of rally until the bottom half of the ninth, when Benson was relieved by Leif Sorenson after walking the leadoff batter, Jack Colton. Colton then advanced to second on a sacrifice bunt by Sean O'Hara before Danny Moskovits drove him in with a walk-off single.

Getting the win for Harvard was Andrew Hatch, who pitched the final three innings, allowing no runs on four hits while walking one and striking out three.

While the offense was absent against Hartford, UMass did produce against CCSU on Tuesday, scoring runs in each of the first three innings and even adding some insurance after the Blue Devils threatened.

Against CCSU (17-14-1), UMass got things going in the top of the first as Anthony Serino led off with a double to left-center field. After Eric Fredette fouled out to second base, Matt Gedman doubled to right-center field, scoring Serino while extending his career-long hitting streak to 16 games.

The Minutemen rallied in the second inning as well, when Nik Campero reached base with a one-out walk and then advanced to second on a Nick Sanford ground out. Rich Graef then doubled to right field, which brought Campero home. Serino followed with an RBI single for his second hit of the game, scoring Graef.

UMass tacked on three more in the third, starting with Tom Conley's RBI triple. Back-to-back doubles from Kyle Multner and Campero put the Minutemen up, 6-0.

The Blue Devils answered with two runs in the fourth with a two-run home run from Pat Epps.

The Minutemen added to its 6-3 lead in the top of the ninth with two insurance runs, finalizing the 8-3 outcome. UMass' Ben Hart earned the victory, throwing eight innings while allowing three runs on four hits and four walks. He struck out three. UMass head coach Mike Stone was impressed with Hart's outing, saying that it was an excellent performance and it was just the kind of start the Minutemen needed after the big loss to UConn.

After such a low offensive output against UConn, Stone was pleased with how the team manufactured runs. "It was a good productive day offensively," said Stone.

UMass will look to rebound on Friday when they take on Xavier at home at 3 p.m.

Students lobby Mass. reps for funding for higher ed

By Matthew M. Robare
Collegian Staff

Under gray skies, around 50 University of Massachusetts students traveled to the Massachusetts state house in Boston Wednesday to lobby the House of Representatives for more funding for UMass. The effectiveness of Lobby Day won't be known until after the House votes, but the mood was optimistic among the participants, despite the state house being almost devoid of representatives.

Organized by the Center for Education Policy and Advocacy (CEPA), an agency of the Student Government Association and paid for by the office of Vice Chancellor for Student Affairs Jean Kim, the delegation focused on three issues: Amendment 732 to the House's version of the budget, proposed by Rep. Sean Garballey (D-Arlington), "to fund salary adjustments for public higher education collective bargaining agreements," according to the text of the amendment.

According to CEPA's Melissa Urban, a senior management major, those agreements would have to be funded by fee increases if the state does not step in.

Amendment 494, proposed by Rep. Tom Sannicandro (D-Ashland) would increase funding for financial aid to Massachusetts students from $86,507,756 to $89,507,756. The UM students were also lobbying on behalf of a bill called "An Act to Reinvest in our Communities," introduced by Sen. Sonia Chang-Diaz (D-Boston), which would raise the state income tax rate while providing broader tax exemptions to the middle class.

The current version of the House budget allocated almost $418 million to the University of Massachusetts System.

Lobby Day in Boston was kicked off on the Common with a rally attended by just the students from Amherst, a few UMass Boston students, Chris Dunn, UMass Amherst's "advocate" in the state house, Ellen Story, who represents Amherst in the House and a man in a teal coat who kept trying to tell everyone about how public higher education wasn't important because the end of the world is coming soon while holding up a leaflet with Bible verses printed on it.

After the rally, the students trekked up the hill to the state house's Hooker Entrance, chanting various slogans such as "What do we want?" "Education." "When do we want it?" "Now." And "You can't fight the power, the power of the students, 'cause the power of the students don't stop."

CEPA coordinators organized the students into groups of three to five, gave them a list of representatives to attempt to talk to, gave them scripts, information sheets and papers to leave behind with each representative's staff. CEPA also conducted hour-long training sessions where students were briefed on the budget process and how to lobby.

One group was made up of senior political science major Ben Bull and freshmen Anna Petsching and Evelynn Bernhardt. They visited the offices of Reps. Tim Madden, Kevin G. Honan and Robert Koczera, but were only able to meet with staff.

"It's good your group is educated about the [student] loans, because I wasn't," said Koczera aide Kevin Botelho. "I'm still paying off my loans."

The group was unable to get a firm answer regarding the issues it advocated from any of the staffers they spoke with. Amy Goldberg, Madden's legislative aide, said that the representative was "aware" of all the issues and "looking into increased funding."

Stephen J. McSherry, a graduate of Westfield State College and legislative aide for Honan, said he was "pretty sure" Honan supports the two amendments, but that he is

Holi colors: Hampshire celebrates Indian holiday with vibrant festivity

By Michelle Williams
Collegian Staff

Through a cloud of colorful dust at Hampshire College, students could be seen throwing, smearing and splashing bright powders on each other in celebration of Holi.

Holi, also known as the Festival of Colors, is a traditional holiday that welcomes the arrival of spring and anticipates of a good harvest for the season.

The holiday is celebrated with music, dancing and the custom of throwing bright powders and shooting colorful waters at other participants.

The powders, put in metal containers for quick grabbing and throwing, were in vibrant colors like chartreuse, lavender and magenta.

The free event was held on the library lawn of Hampshire College Thursday afternoon and featured Indian and Pakistani dishes from local restaurant The Garden, in Agawam, which came with a warning.

"This dish is very spicy," said Syma Sheikh, pointing at a vegetarian Indian dish. Sheikh is the intercultural community advisor for the Spiritual Life Center at Hampshire College, and was an organizer of the event.

The event was sponsored by the Spiritual Life Center that welcomed all to experience Holi.

"Everyone is welcome to enjoy this colorful festival and the Indian snacks," as stated on the center's website.

Dozens of students participated in the event, and left saturated in color and smiling.

"I thought it was so interesting," said University of Massachusetts student Alina Gusev. "I've never been to an event like this before and I'm very glad I came today." Gusev left the event covered a mix of yellow, purple, green and magenta paints.

Michelle Williams can be reached at mmwillia@student.umass.edu.

Students turned out Thursday at Hampshire College to participate in a vaunted Indian tradition, Holi, where adherents mark the arrival of spring by spraying each other with brightly-colored powders.

Students seek increased fin. aid funds, tax hikes

LOBBY DAY from page 2

"not crazy about [Chang-Diaz's tax bill]."

"I was pleased" with how the rally went, said Amanda Jusino, a senior Spanish major and CEPA's statewide core team leader. "We worked really hard to try to put this together in a pretty short timeframe, and I think a lot of the students who came out today were really excited to be meeting with representatives and to be advocating for our University."

Jusino said CEPA chose the issues by working with the SGA and the Public Higher Education Network of Massachusetts (PHENOM) to examine the amendments and determine which ones would be best for students. "We want to pick things that are winnable and realistic," she said. "But at the same time we want to communicate with students and find out what they want."

"I thought it went well," senior Sam Dreyfus said. "I mean, every year we hit the same response, which is, 'We would really love to fund this stuff, but we can't fund it at the level we'd like because the budget is so tight.' That's why I think it's really important that this year we're working on getting this new revenue bill passed. Even though every year we hit the same response, we do get results."

Jusino said lobbying in 2008 resulted in a $3 million increase for MASSGrant student assistance.

"The work that CEPA was doing in conjunction with PHENOM really gave that group the ability to do a lot of the work it did two summers ago in winning a lot of the stimulus funding," Dreyfus said. "Basically, the Patrick administration was not going to use a lot of the stimulus funding for public higher education; it was going to use it on some other things and PHENOM figured out that this was in violation of the terms of the stimulus grant. They lodged a complaint with the federal Department of Education and got the Patrick administration to direct the funding toward public higher ed, which actually prevented a fee increase the following school year."

The CEPA training sessions provide a brief overview of the budget process: after the House votes on the amendments, the budget will be sent to the Senate to be further modified. A conference committee composed of members of both chambers will reconcile both versions and send it to Governor Patrick, who can use line item veto power to nix certain provisions without rejecting the whole budget.

Nuclear physicist Kemm to discuss Japan situation, nuclear power Fri.

In the wake of last month's meltdown at the Fukushima Daiichi nuclear power plant in Japan, the Collegians for a Constructive Tomorrow (CFACT) will bring world-renowned nuclear physicist Dr. Kelvin Kemm to the University of Massachusetts today.

Kemm will lecture starting at noon in room 133 of the Isenberg School of Management and will discuss the Japanese nuclear disaster, the future of nuclear energy and nuclear energy in the third world, announced CFACT director Dmitriy Shapiro in a Thursday release.

Kemm believes that constructing nuclear power plants in developing nations can "bolster civilian infrastructure and improve the quality of life," according to the release.

Courtesy Collegians for a Constructive Tomorrow

Nuclear physicist Kelvin Kemm will speak Friday about Japan's nuclear crisis at UMass.

The South Africa native is being brought to campus by the newly-inaugurated campus chapter of CFACT, which Shapiro said in the release is "a conservative, free market environmental lobby." Kemm's speech is also being sponsored by UMass physics professor Dr. Gerald A. Peterson, who "supports the event because of his research, involvement and interest in nuclear power," according to Shapiro's statement.

Kemm will discuss whether he feels nuclear power plants actually pose a major threat to areas susceptible to earthquakes or tsunamis, addressing both media's scrutiny of nuclear power in vulnerable areas and the real threats such arrangements pose. He is the founder of the environmental lobby Green and Gold Forum and was, according to Shapiro's release, the first African appointed to the European Science and Environmental Forum (ESEF). Kemm will also attempt to back up his assertion that nuclear power is the cleanest and safest form of energy, Shapiro said.

Shapiro said in the release that Kemm's visit comes at a perfect time, given recent events.

"Even with the nearly impossible amount of time to organize the event," he said, referencing the fact that talk of Kemm's appearance only began about a week ago, "we decided to accept the challenge because of how timely the nuclear power issue is."

Kemm's presentation will commence at noon Friday and is free and open to the public.

The Folly of Financial Markets

Mike Tudoreanu

In my columns throughout this past year, I've often talked about the way that Wall Street and the banking industry, which caused the current economic crisis, have been trying to pass on the costs of their actions onto ordinary working people – through such things as union-busting and cuts in social spending. But I have never talked about what is wrong with the capitalist financial system we have today, and why it needs to be completely replaced. It's not a matter of greed, as we are often told. No matter if bankers and investors are greedy or not, they are players within a hopelessly broken system that will always cause recessions, unemployment, and hardship for working people.

Here is how the stock market is supposed to work, in theory. Investors have money, and they are interested in buying stocks and debt from the companies that are going to be most profitable in the future. The greater the future profits of a company, the more money you can make by investing in that company today. The way to make a company profitable – in this theory – is by being efficient and having good business practices.

Thus, companies who follow this path attract investment and get rewarded for their good work; companies that fail to be efficient lose investors and go bankrupt. So, the theory says that financial markets reward good companies and punish bad ones.

In reality, even if it is true that long term profits are made by being efficient and having good business practices and so on, investors have no reason to care about the long term. Stocks are continuously bought, sold and re-sold every day. And if you buy stock in "Subprime Mortgages Inc." today and plan to sell it tomorrow, you have no reason to care what will happen to that bank or company next month.

You don't want them to be efficient and sustainable in the long term. You want them to look better tomorrow than today, so the price of their stock will be higher and you can sell it for a profit. If investors do this every day, the short term is the only thing the company will ever care about. This is how banks and companies end up making decisions that hurt both themselves and the rest of the public in the long term.

This is how companies ended up creating tens of millions of bad mortgages. When a company's stock and debt keeps changing hands rapidly in the stock market, it destroys the company's ability to plan for the future.

That's bad enough. But then it gets worse. Buying any kind of stock or financial instrument means placing a bet on something that you think will happen in the future. If you buy a company's stock, for example, you are betting that the company will increase its profits in the time between now and when you plan on selling the stock.

If you buy a credit default swap, you are betting that someone won't be able to pay their debt. Everything that happens in the world of finance is a kind of gambling. But it's not really like a casino; it's worse, because the players don't know the odds of winning. If you roll a pair of dice, you know the odds of getting two sixes (1-in36). But what are the odds that "Subprime Mortgages Inc." will increase its profits next week? Is it a safe bet or a long shot? No one can really know. So investors rely on the opinions of other investors to guess these odds. If all investors say that something is a safe bet, then it must be a safe bet – or so the thinking goes.

The problem, of course, is that all investors may be wrong. This is how price bubbles appear in the stock market. A company makes some profits. Some investors see this and bet that the company will continue to make such profits tomorrow or next week, so they buy its stock. If they guessed right, those investors make a lot of money.

Other investors see this and join in, buying stock in the same company. The increased demand for the company's stock causes the price to go up, so the bet that the price will be higher tomorrow than today becomes a self-fulfilling prophecy. More investors buy the company's stock, which causes the stock price to go up, which causes more investors to buy it (in the hope that it will go up even further), and so on.

The positive feedback loop continues, driving stock prices higher and higher and getting more and more investors to buy until there is no one left to buy it any more, the bubble bursts and the stock market crashes. This cycle of bubbles and crashes has repeated itself many times in history.

The stock market, and the private financial system in general, is not merely imperfect, it is an inherently bad system. It is actively making things worse. Many people have called for it to be more closely regulated, but any such regulation is just damage control. A regulated financial system will still make companies focus on the short term and it will still cause price bubbles and general economic instability. Regulations can only restrain and reduce these problems, not fix them.

The only real solution is to get rid of private banking and Wall Street, and replace them with a system where investment is allocated by public institutions with a democratically elected leadership. Let the people decide which companies deserve investment and what kinds of loans we need, rather than leaving these decisions up to a bunch of wealthy gamblers who demand instant gratification.

Mike Tudoreanu is a Collegian columnist. He can be reached at mtudorea@econs.umass.edu.

Another summer, a new world of choices

Eli Gottlieb

"Spring is here, spring is here. Life is skittles, and life is beer. I think the loveliest time of the year is the spring. I do. Don't you?" These are Tom Lehrer's lyrics for, "Poisoning Pigeons in the Park," and they sum up how we should feel right now about the upcoming summer, unless of course, you are looking for a summer job.

If you're a freshman, have a good time working at the Stewarts ice-cream counter. Sophomores and juniors, this means its time to find internships. Seniors, time to find jobs or go to grad school.

This all doesn't seem too bad, except that America has faced a record rate of youth-unemployment, so the sophomores, juniors and seniors might be learning what it means to have a small wallet. According to the U.S. Bureau of Labor Statistics, in July, 51.1 percent of Americans between the ages of 16 and 24 years old were unemployed. We all need to figure out what the hell we're doing with our summers, and probably our lives, if we can't get anyone to hire us for actual, paying work. There's got to be something we can spend our time doing productively, or at least enjoying.

So, I present to everyone, the wonderfully fun non-careers that will probably do better for us than normal unemployment anyway for the summer.

The first thing to do in order to shut your mom up is to become a professional player of the collectable card game, "Magic: the Gathering". After all, each Magic Pro Tour gives out $40,000 to the winner, and there's another $190,000 in prizes given out to the rest of the Top 8. All you have to do is learn to the play the game, follow the professional metagame, build a pro-level deck and strategy, then enter tournaments and win. First, your local Friday Night Magic, then an open Pro-Tour Qualifier or Grand Prix tournament, then the actual Pro Tour, then the world. The best part, of course, isn't the earning of a living. The best part is the fun: the game you learn, the many friends you'll make at your local gaming store (Worlds Apart and the Games Hobbyist League RSO), the beauty of Magic's complex mathematics and of course the simple joy of looking at someone who thinks they've won and saying, "Counterspell."

You could also go live on a kibbutz, a community in Israel established on the principles of social equality. There you could live a happy life beneath the sun, working on eco-friendly growing of delicious vegetables and freely raised meat and dairy animals. You'd live in a communal – nay, communist environment, in which you know everyone, everyone knows you and your actual needs are supplied for by the community. Sure, you wouldn't get rich, but neither would you ever suffer extreme poverty.

Now, before anyone objects that I'm just pimping for Israel again, most kibbutzim in Israel actually went capitalist a long time ago. Only a few truly communal ones remain, and there are actually kibbutzim of a few sorts all over the world now. This summer, I'm hoping to move into one in Seattle, an old-model collective of hard-left Jews doing some organic farming in the city.

OK, so now we're all professional "Magic: the Gathering" players living on communes. We get out in the sun, and then we run to the gaming store to get out of it. We've got a healthy fruit-and-vegetable diet. We're really, really different from most people. The logical thing to do, at this point, is to start filming your life and putting it on YouTube. For some strange reason, the horde of people on the internet will actually pay attention to any sufficiently unusual video you put up and possibly even send you small amounts of money (to supplement your income from gaming and farming). Once you've got sufficient footage, you can even make it into a documentary film and hawk it to actual film studios or theaters. Since it's a documentary, you don't need much more than a camera, a computer and your friends. Getting a film shown in theaters will look great on your bucket-list. Hell, you could actually become a pretty cool movie star this way, so please make sure to come back to the University of Massachusetts campus and do a documentary chapter about your time here.

Of course, by now you've spent a long time on YouTube, haven't you? Too long, in fact. You've seen every stupid music video, every Photoshopped clip of someone's cat and every dumb meme. That means that by now, you've exposed yourself to the Slender Man. He's after you; maybe he's always been after you. Everyone knows that overexposing yourself to information about the Slender Man brings his attention.

It only helps that you're a documentary filmmaker living on a farming commune who plays trading-card games for a living. Everyone already considers you insane by now. Now you find yourself glancing around every street corner for the figure in the too-tall suit with too many arms,– squiggly, squirming arms too – flapping far more flexibly than anything with joints ever could but far more coordinated than any tubes of mere flesh. Oh well, it was fun.

Surely with any of these "jobs", your summers technically wouldn't be filled with woeful unemployment.

Eli Gottlieb is a Collegian columnist and can be reached at egottlie@student.umass.edu.

POINT-COUNTER-POINT

"I disapprove of what you say, but I will defend to the death your right to say it." - Evelyn Beatrice Hall

Will Extravaganja reform weed policies?

A disorganized festival

Jaron Lewin-Berlin

According to the Cannabis Reform Coalition, Extravaganja is intended to "increase active support for marijuana legislation." On two days this past weekend, law enforcement allowed people to gather in the commons of Amherst and smoke marijuana freely without handing out many tickets. If someone is seen smoking outside of the venue or is seen drinking alcohol or selling drugs there were consequences. But in general, as long as people are respectful of the boundaries of the event, smokers are not bothered. This year at Extravaganja there were 17 tickets handed out with no arrests, according to Masslive.com.

I went to Extravaganja this year, observing how the legalization of marijuana is supported by the event. All I saw was a lot of people getting stoned and many vendors in the area selling mainly bowls, food and tie-dyed tee shirts. I also saw some people who brought small children to the event, exposing them to serious levels of second hand smoke.

I know marijuana is not a dangerous drug, but I don't believe it should be allowed to be used in the vicinity of 8-year-old kids. The fact that the Commons is a public area and that marijuana use is acceptable during the festival is okay in my book, but I do believe there should be some kind of an age minimum.

Most of the stage time at Extravaganja is devoted to a wide variety of music. Some time is also given to speakers from the Cannabis Reform Coalition and other similar organizations, including John Sinclair, who was sentenced to 10 years in prison for attempting to sell weed to undercover police officers. Sinclair's struggles influenced John Lennon to write a song about him and led to the decriminalization of marijuana in Ann Arbor, Mich.

This was due to the fact that, as a public figure, his arrest uncovered the absurdity of anti-marijuana legislation and lead to an enormous rally for his freedom, not because he gathered a lot of people in one area to smoke weed.

I saw someone on stage speaking about the need for people to band together and fight against the "prohibition" of marijuana. Although his sentiment was clear, he had very little to say about what actually should be. He was rambling about how people should send letters to Barack Obama about how marijuana should be legalized. Seriously, I'm sure Obama has more important things to do than read letters from people who want to be able to get high without being bothered by authority.

All of his speaking about the need to group together and legalize weed was met with a vast silence, while any mention about getting high and having fun was met with intense cheering. All these people are doing is preaching to the choir. I'm sure many people who showed up in Amherst to smoke weed are already in support of its legalization, and they do not need to be reminded of the benefits of legalizing marijuana use.

I believe in the cause of the legalization of marijuana. If marijuana was sold and taxed it would create billions of dollars each year in revenue. Marijuana is also a considerably less harmful drug than many which are available on the market with very limited restrictions. It causes less health problems than alcohol, tobacco or fast foods and no matter how much is inhaled no amount is fatal, although several over the counter drugs, including aspirin and Tylenol have potentially fatal side effects. However, the methods which are used at Extravaganja seem ineffective at supporting the legalization of the drug.

A bunch of people getting together to smoke weed in public and listen to jam bands does nothing to convince anyone that marijuana should be legalized. The organizations should be focused on spreading awareness of the benefits of legalizing marijuana to people who aren't already convinced.

The prohibition of alcohol was repealed due to the efforts of well organized groups, such as Americans Against the Prohibition Amendment (AAPA) and the Voluntary Committee of Lawyers (VCL) who devoted their time to repealing the amendment legally, gaining the support of influential Americans and drafting repeal resolutions. None of these groups made any successful headway by having everyone hang out in the town center and get drunk. They were able to change the law by taking appropriate steps and actions. I support the legislation the CRC is attempting to pass, but I believe there are better methods to achieve its success than setting up a festival.

It would be more effective if the thousands of people who showed up to Extravaganja actually grouped together and rallied for the cause, instead of sitting around and getting stoned.

Jaron Lewin-Berlin is a Collegian columnist and can be reached at jlewinbe@student.umass.edu.

A step in right legal direction

Billy Rainsford

Extravaganja, of course, is the famed yearly festival where the town of Amherst plays host to marijuana reform activists from all over the Northeast United States. The event is certainly controversial, if for no other reason than its celebration of an illegal drug. But even within the community of regular tokers, there remains disagreement over the effectiveness of Extravaganja: Does it really help change public opinion on marijuana? Does it help or hinder the marijuana reform cause?

This year's especially extravagant Extravaganja, lasting two days instead of one, should lay these doubts to rest. Extravaganja is as effective a protest as any out there, and produces tangible results for the reform movement.

It's no coincidence Extravaganja takes place in a state with relatively relaxed marijuana laws. Extravaganja predates the 2008 Massachusetts ballot measure that decriminalized small amounts of the drug by over 15 years. The measure was passed in spite of the fact that the college students and imported pot heads from around New England who make up the majority of Extravaganja's crowd are not known for their voting record.

Instead, events like Extravaganja raised public awareness of the safety of marijuana to the point where more Massachusetts residents were willing to vote in favor of the 2008 decriminalization measure. Public support of marijuana reform has greatly increased over the years. In a February 2011 poll conducted by The Economist, supporters for marijuana legalization and regulation outnumbered opponents by a 2-1 margin.

Marijuana activists reached this point through the time-honored practice of in-your-face activism. Americans have never been shy about forcing issues onto the public agenda. More famous examples from history are from the greater societal movements, such as African-American sit-ins during the civil rights movement or gay pride parades marching through the streets of major cities. The point behind acts like these is to expose the rest of the public to the issue, by putting it plain sight.

Extravaganja exposes the public to marijuana use. By holding the event out in the open — right on Amherst Commons — the public has no choice but to pay attention to the event. More importantly, though, is that the public also sees the results of marijuana usage. It can see that not every smoker is a doped-up hippie; many are instead very positive forces and contributors within the community.

In order to maintain this positive image, Extravaganja must remain a peaceful and orderly event, and, for 20 years, it has been successful in doing so. This past weekend, no arrests were made for marijuana-related offenses. Amherst police did issue 17 citations for possession of less than an ounce of marijuana, according to Masslive.com. This was likely due to confusion over whether smoking marijuana was actually allowed on the Amherst Commons.

The widely held belief is that the Amherst police "look the other way" when it comes to Extravaganja. However, Amherst Police Chief Scott Livingstone told Masslive that the police "never made any kind of agreement that said police weren't going to enforce the laws." The truth is likely somewhere in the middle, but in any case a mere 17 citations out of hundreds, perhaps thousands of Extravaganja party-goers is an impressive record.

The UMass Cannabis Reform Coalition, the organization that organizes Extravaganja each year, deserves credit for the event's success. It's not easy to get a loaded subject like illegal drug use on the public's radar and then start changing opinions on it.

College students, of course, have a long tradition of activism, and though they may not vote in very high numbers, their influence shouldn't be underestimated. The CRC carries on the tradition of student activism by championing a cause that, thanks to organizations like the CRC, is important to many Americans.

Personally, I do not use marijuana. But I am one of many non-smokers whose opinions have been swayed by the efforts of those who took part in Extravaganja. When I looked around at my fellow UMass students this past weekend, I did not see a noticeable difference in crime or rowdiness or disorderly behavior that could be chalked up to drug use. Extravaganja showed that these bad behaviors would not result from simple marijuana use.

The 20th Extravaganja festival showed off everything that was right about marijuana legalization. The people, at least of Amherst and New England, have spoken on the issue. If there's one thing Extravaganja convinced people of, it's that the time to take action on reform is now.

YOUR WEEKEND GUIDE TO ART, MUSIC, FILM & CULTURE

ARTS@DAILYCOLLEGIAN.COM

2011 SUMMER CONCERTS

By Kate MacDonald
Collegian Staff

For music fans of any sort in the New England area during the summer of 2011, the Boston area is undoubtedly the place to be. Tons of bands, solo artists, comedians and even television show casts will be showcased in the best venues Massachusetts has to offer.

One of the first shows that will kick off the summer of concerts is sure to be enjoyed thoroughly by a specific group of music/television fans. The cast of "Glee" will hit the stage at Boston's TD Garden the night of June 6, in the middle of their nationwide tour. While ticket prices are somewhat expensive ($49.99 or $89.99), judging by the show's massive following, the Garden will probably be close to capacity.

If you can't make it to the "Glee" concert, but still hope to get your fill of live pop music this summer, fret not. An older crowd might enjoy hearing the 90s hits of New Kids on the Block and Back Street Boys as they put on a joint concert at the Garden on June 4, and another one at Fenway Park on June 11. Newer pop icons hitting the area include Katy Perry (at the Garden June 18), Ke$ha (hitting the Bank of America Pavilion on Aug. 16) and Selena Gomez (wooing the crowd at the Pavilion on Aug. 25).

Music fans on the other end of the spectrum might not find a good time at a pop concert, and may be seeking out hip hop acts instead. Luckily, Jam'n 94.5's annual Summer Jam concert is put on at the beginning of the summer months, on June 4 at Mansfield's Comcast Center. The lineup includes Chris Brown, Fabolous and Waka Flaocka. Or they could hit Kiss 108's show on May 21 in the same venue, which will feature Flo Rida, Mike Posner and Taio Cruz, among others. Rihanna will also make it to the TD Garden on July 29, along with Cee Lo Green and J. Cole.

Fans of the music of yesteryear won't be disappointed either. It'll be commonplace to see parents at Boston's House of Blues this summer, watching Paul Simon (on June 2), Pat Benatar (July 9) and The Cars (May 26). Older and younger folks alike might want to consider seeing the B-52s and Go-Go's at the Pavilion on June 9 or Jimmy Buffett at the Comcast Center on June 18.

Country fans who aren't that excited about Buffett will find solace in the younger country set, which will definitely make its way up north. Perhaps the most talked-about show will be Taylor Swift's, at Gillette Stadium on June 25 and 26, during her "Speak Now" tour. The home of the New England Patriots will also be visited by country great Kenny Chesney for two nights – Aug. 27 and 28.

On July 16, country fans can see some of the brightest country stars on the same stage. The Country Music Association's reigning "Entertainer of the Year" Brad Paisley will be taking the stage with the CMA's "Male Vocalist of the Year" Blake Shelton, as well as Jerrod Niemann.

Rock shows are not lagging this summer either. The much-anticipated Van's Warped Tour will be making its way back to the Comcast Center on July 13, and will consist of acts like Of Mice and Men and We Came as Romans. Fairly new group The Script is hitting the House of Blues stage on June 8.

Classic rock will definitely be making a comeback at the Comcast Center. Journey will be belting out hit singles like "Faithfully" and "Don't Stop Believing" on Aug. 12. Def Leppard and Motley Crue, accompanied by Poison, will be in Mansfield on June 30 and July 19, respectively.

If moshing and 80s hair bands aren't your thing, softer rock/indie bands are coming up north in the summer months of 2011 as well. Death Cab for Cutie will be at the smaller Paradise Rock Club on June 5, while Dispatch will play three much bigger shows at TD Garden on June 24, 25 and 26. Florence Welch, with her band Florence and the Machine, will be belting out "The Dog Days are Over" at the Pavilion on June 23.

The biggest jam band concert in the Bay State in the summer of 2011 will undoubtedly be Phish. Their massive cult following can see Trey Anastasio and company at the Comcast Center on June 7.

Those who would rather laugh than dance will find a plethora of comedians in the Boston area. Bravo's resident comedienne Kathy Griffin will be offending many with her hilarity at the Wilbur Theatre on May 13 and 14, while late night host Craig Ferguson will be on the same stage on July 31.

There is literally something for everyone in on the best stages of the Boston area during the summer of 2011. The best of artists have released albums within the last year, so the majority of chart toppers will be touring the nation soon.

Emerging Choreographers are D.O.P.E.

By Acacia DiCiaccio
Collegian Staff

This past weekend, University dancers put on a "D.O.P.E." performance at Hampshire College Dance Studio Theater.

Ten dance students choreographed their own pieces for the program. The Alive with Dance RSO sponsored the Emerging Choreographers series, titled "D.O.P.E.: Dancers of a Provoking Existence." This program allows sophomore and junior dance majors the chance to present their own choreography on stage. Anyone can audition for this event, so some non-majors were able to perform as well. Though Hampshire College's auditorium was small, the artists behind the work displayed there showed great talent.

The event began with Christen Vanyur's piece entitled "Top of the World," where three couples broke out in a hip-hop routine to The Cataracs song of the same title. This piece warmed up the audience with a flirtatious and upbeat performance, and was the only dance of its genre.

Following the opening piece was a contemporary ballet choreographed by Blake Fishman. This dance played with the relation and harmony between the five dancers and their bodies.

Many of the pieces in "D.O.P.E." experimented with the boundaries of ballet and modern dance. Pieces like "Finding [my] Place" by Karin Linden and "No Strings Attached" by Kate Citron and Channing Hoover used both genres of dance to create their works of art. In the same method, Tristan Drummond choreographed the second piece in his series entitled "Chronicles," involving three separate stories that appeared to intertwine. His piece also showed the graceful side to male dancers as he introduced the piece with himself and two other male dancers in a short ballet piece, which contrasted with the men in "Top of the World."

"Manipulation" by Becca Green was visually and artistically stunning. The piece began with dancers as silhouettes before a red background. The piece explored manipulation of the body as well as sound, when the dancers made new rhythms by clapping during musical breaks. The long-limbed dancers chosen for this piece did a spectacular job exploring space and movement in a visually stunning way.

As the title suggests, the performances illustrated the provoking existence of the human experience. Justine Picarello's modern piece "Crossed Roads" commented on the difference between naive young adults and the exploration that comes with age, illustrated by dancers bound in handcuffs and then breaking away. "Crossed Roads" was truly able to illustrate the talent of the dancers in the piece with the choreography chosen.

Laura Natario's choreography for her piece "Asteria & Eos" focused heavily on the strengths of the two male dancers accented by a group of plainly dressed female dancers. The costume designs, music and intricate choreography made for a captivating piece.

The show closed with Tara Brown's "Whitewash," meant to illustrate the struggle of dancers whose worlds are consumed with dance and struggle with perfection. The theme behind the piece, as well as costume, music and lighting all echoed the themes of the popular ballet movie, "Black Swan." The performers wore white tutus with cut-up black shirts over them and their dance was organized chaos on the stage. The music, the title track from the movie "Requiem for a Dream," fed well into the vision for the piece. As the final dancer fell to the ground and lights went out, cheers echoed through the concert hall. These choreographers held the audience captivated until the very end.

UMASS DEPARTMENT OF MUSIC AND DANCE

Alive with Dance will also be performing on Friday and Saturday at the Bowker Auditorium. This event will feature UMass' Dance major seniors and their choreography. Tickets for students are only $5 for students and can be purchased through the Fine Arts Center box office at (413) 545-2511.

Acacia DiCiaccio can be reached at adiciacc@student.umass.edu.

Apple handhelds tracking file nothing new

By Troy Wolverton
San Jose Mercury News (MCT)

SAN JOSE, Calif. – That iPhones and other Apple handheld gadgets keep track of their users' moves may have been news to most users when it was publicly disclosed on Wednesday. But it wasn't news to investigators who examine cell phones and other electronic devices for clues in criminal and other legal cases.

Those investigators and the software developers who make applications they use in their work – have known since at least last year that the iPhone has a hidden file on it that tracks its movements. Data gleaned from the file has been used in numerous investigations since forensics experts discovered it, those experts say.

"I've analyzed so many iPhones I've lost track," said Christopher Vance, a digital forensics specialist at Marshall University's Forensics Science Center, which works with law enforcement officials investigating crimes in its home state of West Virginia. Using the iPhone's tracking file "is part of the standard analysis for me," he added.

Privacy advocates warned that the file – and its use – has profound implications for owners of Apple handheld products.

"Apple has unwittingly or knowingly become complicit in a wide range of mobile surveillance," said Jeff Chester, executive director of the Center for Digital Democracy, a consumer privacy advocacy group.

The tracking file came to the attention of the general public on Wednesday, when two researchers at the Where 2.0 conference in Santa Clara announced their discovery of it. The file, which can be found on all Apple devices running the latest version of its mobile iOS operating system, contains the latitude and longitude of cell phone towers and Wi-Fi access points with which those devices have interacted.

Apple has yet to offer an explanation for the file and did not return calls seeking comment.

Sean Morrissey, CEO of Katana Forensics, said he discovered early last year that Apple devices running iOS 3, the then-current version of the operating system, were logging their locations over time. With iOS 4, which came out last summer, Apple moved, renamed and reformatted the log file and began backing it up on to users computers, he said. The changes made the tracking file more accessible to forensics researchers.

Katana has developed an application called Lantern that it offers to companies and law enforcement agencies "from the federal to the local level" for use in gleaning data from iOS devices, Morrissey said. As early as May or June, Katana had developed a software tool that it used internally to access the iOS tracking file for clients for which it consulted, he said. The company included a version of that tool with the new version of Lantern it released in January, he said.

Katana consults on about a dozen cases a month and regularly uses the location tool in Lantern to find out where particular iOS devices have been, Morrissey said. Cases the company has consulted include missing person cases and custodial kidnappings, he said.

Likewise, Access Data, which offers similar software for examining cell phones, has been gleaning data from the iPhone's tracking file "for quite some time" said Lee Reiber, the company's director of mobile forensics. The data gleaned from cell phone towers doesn't give a precise location of where an iOS device was at any one point, but it often will say what side of a tower the device was connected to, which can help investigators zero in on a device's coordinates, he said.

"It's fantastic data," he said.

Forensics experts who have had access to the data in the tracking file emphasized that they only gleaned the tracking data legally, either via a search warrant or with the phone owners' consent.

But the fact that they were able to glean it at all should raise a warning flag for users of Apple's iOS devices and users of other devices with similar features, according to privacy experts.

"Whatever the engineering explanation for this, if there is one, it's critically important that consumers be aware of this kind of tracking and, to the extent possible, be given a choice of whether they want this kind of file on their system," said John Morris, general counsel at the Center for Democracy and Technology.

The Minutemen will compete in the Battle 4 Atlantis tournament over Thanksgiving break next season along with schools like Connecticut and Harvard.

Kellogg enters team for Battle 4 Atlantis

By Herb Scribner
Collegian Staff

While the Massachusetts football team announced its move to the Mid-American Conference and to the Football Bowl Subdivision, the men's basketball team made its own declaration.

Over Thanksgiving break later this year, the Minutemen will compete in the Battle 4 Atlantis tournament in the Bahamas – a competition that is not unlike the Maui Invitational tournament they competed in last season. Joining the Minutemen for this tournament will be national champion Connecticut, Florida State, Utah, Harvard, Central Florida, College of Charleston and North Carolina-Asheville.

"It's an unbelievable opportunity to go against some of the top teams of the country and to be together as a family, as a basketball family, on Thanksgiving," said UMass coach Derek Kellogg. "It's a perfect opportunity. The setup they have down there rivals some of the best tournaments that are going, which is really the Maui tournament."

According to Kellogg, UMass was poised to compete in another tournament down in Cancun, Mexico. However, after plans fell through, Kellogg enlisted the team in the Battle 4 Atlantis.

"I saw that the Bahamas tournament was looking for participants [and liked] the proximity of travel, the teams that are going to be in the tournament and the time of the year," said Kellogg.

For a Minutemen side that was finished after the first round of the Atlantic 10 playoffs, competition against the national champion Huskies and other NCAA tournament-level teams won't be an easy task.

"It's going to give us a chance early in the season to see how we stack up against … one of the best teams in the country and other teams that are NCAA tournament teams or close," said Kellogg. "So we'll know right away where we stand as far as some of the best teams in the country."

Additionally, the tournament will give UMass the opportunity to build its RPI, which will become a large factor when the 68-team national tournament starts sending out invitations.

More than just a competitive event, Kellogg explained that the trip will act as an opportunity for team-bonding. With veteran players Anthony Gurley, Gary Correia and Hashim Bailey graduating, the Minutemen will be looking to reconstruct a relatively young squad.

"Not only are we going to play against some really great teams, but it'll be a great team-building experience," said Kellogg. "We're going to be together for five days, we're going to be traveling to an island in the middle of the ocean and we're going to be together over the holidays, which I think can be a really great team building thing.

"As long as we play well and compete, it can help springboard us a little bit and get us ready for conference play," said Kellogg.

This past season, a majority of Kellogg's work in the preseason was to bring in fans, including Mission 1,000. While Kellogg doesn't expect fans to flood into the Bahamas to watch the team play, he hopes some will be able to make it out.

"I think it's a good time to get fans there," said Kellogg. "I think it's a good opportunity for people who have time after work. I'm not expecting 10,000 fans to go, but if we could get 100 or a couple hundred fans to go, that'd be great."

Kellogg also said that the program might try to create package deals for fans aspiring to go to the tournament. The package could possibly include a charter flight, hotel rooms and tickets to the game.

Herb Scribner can be reached at hscribne@student.umass.edu.

Minutemen travel for last road game

By Jay Asser
Collegian Staff

In its final road game of the regular season, the Massachusetts men's lacrosse team heads on the road to East Hartford, Conn. to face Colonial Athletic Association opponent Hofstra in a battle of ranked teams on Saturday.

The No. 15-ranked Minutemen (8-3, 3-1 CAA) will put their three-game winning streak on the line following consecutive overtime victories. UMass' Kyle Smith once again provided the game-winner in an 11-10 victory over Drexel last Saturday in a triple overtime thriller.

Despite trailing 10-6 in the third quarter, UMass formed a late surge in the final frame to send the contest to extra time. The contest marked one of many games this season in which the Minutemen have had to rally out of a deficit to claw out a win, a situation UMass coach Greg Cannella would like to see less of.

"You try to go up-tempo in practice and not have any lulls in practice," said Cannella. "We seem to have those in each game we've played this year. I don't think we've played in a game where we didn't have a lull. So it's kind of continuing to keep the guys aware of that."

Going against a stout team in Hofstra, the Minutemen likely won't have the same leeway that they've had the past two weeks. The No. 8-ranked Pride (11-1, 3-1 CAA) hold the best overall record in the conference and dropped their only game this season at the hands of CAA foe Delaware, which sits atop the CAA with a perfect 4-0 record.

After attempting to contain Drexel's Scott Perri, the leading goal scorer in the conference (30 goals), last week, UMass will have to deal with Hofstra's trio of Jamie Lincoln, Jay Card and Stephen Bentz on Saturday. Lincoln and Card rank behind Perri in the CAA in scoring at No. 2 and No. 3 with 25 and 23 goals, respectively.

"We always talk about limiting guys and not letting guys get off in the game on you, score four or five goals," said Cannella. "I think if you limit those guys, I think you're doing a pretty good job because they're very talented."

On the defensive side of the ball, the Pride have allowed the fewest goals this season of any team in the conference. Boasting a 6.17 goals against average, Hofstra holds nearly a two-goal difference between it and the next best defense in the CAA in Penn State (8.07). In fact, the Pride defense has yet to allow an opponent to reach double digits in scoring in a contest this season, a rare feat in Division I men's lacrosse.

Cannella will look for his offense to change that but outside factors could play a role in UMass' attack.

"We're going to have to play as this game goes," said Cannella. "The weather could be a factor in terms of footing, it's a grass field so is the game fast or is the game slow? How does it turn out?"

In the all-time series between the Minutemen and the Pride, UMass leads 19-16. The Minutemen won the most recent matchup, upsetting then-No. 6 Hofstra, 11-9, at Garber Field on March 27, 2010. UMass was led by Art Kell, who recorded a hat trick, Will Manny, who had a goal and three assists, and Anthony Biscardi, who chipped in a pair of goals.

In 2006, the two teams met in the NCAA Quarterfinal, arguably the most significant game in UMass lacrosse history. The Minutemen dug themselves out of a five-goal hole in the fourth quarter to force overtime, which they claimed to advance to their first-ever NCAA Semifinal.

Saturday's contest is scheduled for a 3 p.m. start at Rentschler Field.

Jay Asser can be reached at jasser@student.umass.edu.

The Minutemen will head on the road to face Hofstra in its final road tilt of the regular season. The No. 8-ranked Pride hold the best overall record in the CAA with an 11-1 mark.

Ace goes distance for victory in duel

By Stephen Hewitt
Collegian Staff

UMass	1
Fairfield	0

The weather wasn't ideal, but the Massachusetts softball team yet again found a way to get the job done.

After concluding a two-game road trip with a 2-0 win over Connecticut on Wednesday, the Minutewomen (19-14, 8-3 Atlantic 10) returned to their home confines to kick off an 11-game homestand on Thursday afternoon, defeating Fairfield by a score of 1-0 for their 10th consecutive victory.

"This was not a great day to play softball," said UMass coach Elaine Sortino. "It was tough on both teams, between the wind and the cold, you know, I think it was a tough day."

With wind gusts piercing through the UMass Softball Complex at almost 40 miles per hour, forcing fly balls to move towards right field, runs were at a premium and the game proved to be a pitcher's duel between Sara Plourde and Stags starter Sarah Minice.

Following three and a half innings of both pitchers throwing shutout ball and pitching out of a few jams, UMass was finally able to break through in the bottom of the fourth.

With two outs and pinch-runner Stephanie Mix at first base following a Meghan Carta single, Jordan Storro took control of a Minice offering and stretched her single to second to put runners on second and third base. With Cyndil Matthew at the plate, Minice proceeded to throw a wild pitch into the backstop, allowing Mix to score from third to put the Minutewomen up 1-0, a lead they would never relinquish.

That would be all the support that Plourde needed, as she was again her dominant self in the circle. The junior threw a complete game two-hitter, allowing two walks and striking out 12 to improve her record to 17-10 on the season.

Fairfield's best opportunity to even the score came the very next inning after UMass took the lead. After Tiffany Lawson reached first on an infield hit, she was able to reach third when the ball got through to center field after Carta attempted to throw her out stealing second.

With a runner on third and two outs, Plourde was able to regain control, striking out the next batter to end the threat. The Stags would never reach base again, as Plourde mowed down the next six batters she saw for the victory.

"Obviously she's a force to be reckoned with," said Sortino. "We're lucky in a game where we struggled to put one across that she held them to nothing. I thought it was a great effort on her part. I think they came here and they took their hacks and weren't shy about it."

Moving forward, the Minutewomen will have no time to rest as they face four games in three days this weekend and their third consecutive day of action Friday afternoon as they face Syracuse in a doubleheader.

The Orange (29-10, 8-5 Big East) will come into Amherst riding high on a five-game winning streak, the last of which came in a 6-0 shutout victory over Villanova last Sunday.

On the mound, another pitching duel could be in store as both likely starters for SU have reflected dominance this season. Junior Jenna Cairi boasts a 20-8 record to go along with her 1.76 ERA and 195 strikeouts, while sophomore Stacy Kuwik is not far behind with a 9-1 record, 2.53 ERA and 73 strikeouts thus far.

At the dish, junior Stephanie Watts leads an explosive Orange attack that has five .300 hitters in its lineup. So far this season, Watts is hitting .336 with 10 home runs and 29 RBIs.

The first pitch is scheduled for 2 p.m. at the UMass Softball Complex. After Friday's tilts, the Minutewomen will return to the diamond on Easter Sunday to take on George Washington in another doubleheader scheduled to start at noon.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

Junior pitcher Sara Plourde went the distance in Thursday's 1-0 victory over Fairfield, earning her 17th victory as she struck out 12 hitters and allowed two hits and two walks.

With the win over Fairfield on Thursday, shortshop Jordan Storro and the Minutewomen extended their winning streak to 10 games with 13 games left in the season.

Minutewomen attempt to match last year's win streak

By Michael Wood
Collegian Staff

The Massachusetts softball team ended the 2010 season on a 23-game winning streak before losing in the playoffs, and it looks like things could be headed in a similar direction in 2011.

With Thursday's 1-0 victory over Fairfield, the Minutewomen are currently riding a 10-game winning streak. They look less and less like the squad that started the season 2-10 with an eight-game skid and more and more like the dangerous championship team everyone expected.

"I feel like we're getting better every day," said UMass coach Elaine Sortino. "It's obvious that we got off to a rough start, but this is a young team that has sustained a lot of injuries and battled the whole way through [the season]."

With 13 more games on the regular season schedule, UMass can match last season's streak by winning each of its remaining games.

Last year's win streak was spread out over a longer period of time, starting on March 28th and running until Fordham defeated the Minutewomen in the A-10 tournament on May 14th. The team didn't have to deal with nearly as many rain-outs as it has this season (three), which meant that games were evenly spaced out and players received adequate rest in between contests.

UMass also recorded an 18-game win streak towards the end of the 2009 season before falling to Charlotte in mid-April. That streak, like last year's, began at about the same time (March 22) and lasted until April 26th. Eleven of those 18 games came at the UMass Softball Complex and of those 11, two were recorded in doubleheaders.

This year, things are different. Three rainouts have stacked games on top of each other and compacted the schedule as the team tries to make up for lost innings. There have been four doubleheaders already played since the Maroon and White returned home in late March, and five more remain on the schedule. Compare that to last season, when the squad only had to play in three twin bills, and it's easy to appreciate how jam-packed this spring has been for the Minutewomen.

Fortunately for UMass, Sortino's players seem to like playing at home. Over the past two seasons, the majority of its year-end victories have come at the UMass Softball Complex. Fourteen of the 23 wins to end last season came in Amherst and this year, seven of the last 10 wins have come on UMass's home field.

"We'd much rather be here than on a bus or on a plane," said Sortino.

"It feels real good to be back home," added senior catcher Meghan Carta. "I would've liked better weather, but it's good to be on our field with our fans so that's always nice."

UMass stands at 19-14 on the year and 8-3 in Atlantic 10 play. However, the Minutewomen, who typically lead the A-10 each season, are in third place right now behind Fordham and Temple. UMass has already played the Owls this season, splitting a series with them in late March, but the Rams will come to Amherst next week for what could be a preview of conference tournament matchup..

"[It feels] pretty good," said Carta. "I really feel like we're on the upswing. We took a turn and we're on the upswing and we're only going to keep [getting better] from here."

Michael Wood can be reached at mcwood@student.umass.edu.

QUOTE OF THE WEEKEND

"Everytime you say "what" we'll destroy an old lady."

— The Gnomes (**Adventure Time with Finn and Jake**)

GNOMISCOPES

aquarius JAN. 20-FEB. 18
It's almost May and that means it's almost time for Gnome season. Here are some tips for dealing with the wily buggers.

pisces FEB. 19-MAR. 20
When dealing with gnomes, speak Mandarin. It's not their first language, but they find it soothing to hear.

aries MAR. 21-APR. 19
Gnome spirits and liquors can fetch a hefty sum on the black market. Keep your eye out for bottles left in dandelion patches!

taurus APR. 20-MAY 20
What is your favorite nomenclature for a gnome enclosure? Email me and I might put it on the Comics page!

gemini MAY 21-JUN. 21
If you wish to become more familiar with gnomes, there are many videos on Youtube that will show you how to react.

cancer JUN. 22-JUL. 22
The concepts of love, honor and friendship do not apply to gnomes. Make no bargains, deals or arrangements with them without a lawyer.

leo JU 23-AUG. 22
Numb gnomes nimbly nibble nocturnal nectarines. Therein lies the heart of the Gnomes religion.

virgo AUG. 23-SEPT. 22
Today is a holy day for Gnomes, too. Gnug Gnomely died for their nectarines today. They celebrate with mead.

libra SEPT. 23-OCT. 22
Making Gnome Plum Pudding is easy! Just follow the recipe.

scorpio OCT. 23-NOV. 21
When not inhabiting our lovely campus, Gnomes dwell in their traditional mating ground, Argentina.

sagittarius NOV. 22-DEC. 21
It is not possible for Gnomes to sing a high C. Their nasal passages do not allow it.

capricorn DEC. 22-JAN. 19
Ho-grawn, a traditional Gnomish sport can be quite difficult for humans to play, given their lack of tails.

UM alumni return 'back from the front'

Six University alumni spoke Thursday at panel about job experiences, strategy planning

By Chris Shores
Collegian Staff

As many underclassmen finalize their summer internship plans and graduation draws near for seniors, the University of Massachusetts Journalism Program hosted an event last Thursday night featuring a panel of alumni who have found jobs in the field.

The event, which was held in the Bernie Dallas Room of Goodell Hall, featured six alumni of the department. All panel members graduated within the last 10 years and four of the alumni were part of last year's graduating class. The group members were involved in student media during their time at UMass, with at least five serving in some capacity on the Massachusetts Daily Collegian staff.

Throughout the night, the journalism graduates stressed the need to be proactive, to find opportunities, to go beyond expected roles, and to learn and adapt to the changing shape of media.

"Journalists have to always be students," said Eric Athas, a 2008 graduate who currently serves as a producer for WashingtonPost.com. "The ways stories are evolving so rapidly, you can't learn a trade and use that for the rest of your career. [You have to] learn as much as possible and be a student of the profession."

Athas noted that he had to learn on the job while covering a story last June about leishmaniasis, a disease carried by sand flies that was afflicting U.S. soldiers overseas. He described the challenges of the story: the technical and scientific nature of a disease he previously knew little about, the reluctance of a subject to be interviewed, and a desire to accompany the written piece with multimedia.

Julie Robenhymer, – a 2003 graduate who was and the oldest member of the panel, – went through another form of the learning process after graduation. After a friend told her about the website HockeyBuzz.com, Robenhymer disagreed with the nature of one of its stories and expressed her opinion on the site. This led the editor of HockeyBuzz.com to take an interest in Robenhymer and offer her a job. She was skeptical at first, but eventually was won over by the job proposal.

"They wanted me to blog about anything and everything that I wanted. How could I say no to that?" she said. "I go to hockey games and I write about them… [and] I write features. It took me a while to figure out what to do with a blog. A blog can be anything you want it to be."

Mike LaCrosse and Mary Kate Alfieri, both members of the class of 2010, stressed the need to partake in internships during school. LaCrosse interned twice with WGGB, ABC40/FOX6 in Springfield. Now he is a reporter and producer for the network. He explained how during his internships, he would show up on days he wasn't supposed to work or extend his shift beyond the normal hours.

"Get internships and don't just sit there," advised LaCrosse. "Bug the crap out of them."

Alfieri said that internships led her to a job in public relations with the Boston-based advertising and public relations agency Loomis Group.

"Internships are so important," she said. "I had four different internships and they were all different… but it helped me land exactly where I wanted to be."

The panelists fielded questions posed to them by journalism lecturer David Perkins, and were straightforward in their answers about the future of media.

"The problems are really on the business side," said Michael Phillis, a staff writer for the Lexington Minuteman newspaper and a 2010 graduate of the program. "We've developed new tools and new ways to tell stories. We're hoping that the business side will pick up."

MassLive.com producer Sean Sullivan, who is also a member of the class of 2010 graduate, said that the journalism department should change its approach of teaching multimedia in the classroom, suggesting that faculty focus more on theory and journalism principles rather than specific technology which is constantly changing.

"I think the most valuable class I took was Ethics … the stuff I could use every day," he said. "At the same time, I feel like there wasn't a big emphasis on what I could do. I think you'd be better served seeking out multimedia journalism and showing how it is made rather than spending an inordinate amount of time on Final Cut Pro."

Sullivan added that students should be learning the programs on their own time and agreed with his fellow panelists about the need for constant adaptation and education.

A question was posed from the audience about whether the journalism department should require students to become involved in student media organizations. The panel responded that involvement should be on the impetus of the students, not the faculty.

Meeting topic: future of SAA

By Sam Hayes
Collegian Staff

With contentious debates and firm disagreements, members of the University of Massachusetts Student Government Association Senate voted on a variety of bylaw-changing legislations last Wednesday in their second-to-last meeting of the semester.

The contested issue of the night dealt with a motion set forth by Chairmen Nick Barton and Dan Stratford of the Student and Academic Affairs Organizing Committee, as well as Senator Jarred Rose. The issue called for dividing the current Student and Academic Affairs Organizing Committee into two separate committees – one dealing with academics and one with student affairs.

The senate discussed the motion's benefits and concerns. Sen. Zach Broughton spoke in defense of the bill, after which he quickly called the motion. The motion was then seconded, immediately causing Sen. Jason Thompson to burst out.

He called Broughton's mid-sentence calling of the bill, "absolutely ludicrous," "absurd," "ridiculous" and a "sly tactic" that was "insulting to the intelligence of [the SGA senate]." Because the motion was already called to the floor, in order to discuss it further before voting, Thompson called for an official debate.

Each side was given eight minutes to debate the issue, with Broughton and Sen. Matt Reilly speaking in defense of the motion, and Sens. Justin Thompson, Ellen Moorhouse and Ben Johnson opposing it.

Those who opposed the measure argued that most committees don't have enough members as it is, and that adding another would not make sense.

"We have trouble getting quorum for [the Administrative Affairs committee] and Finance [committee] and other committees as it is," said Thompson. He then asked the motion's sponsors, "So you really suggest that we increase the UMass SGA bureaucracy?"

The side in favor of the measure pointed to a projected increase from 40 to 50 senators in the orga-

UMass	5
Hofstra	14

Saturday's game could not end soon enough for the No. 15 Massachusetts men's lacrosse team.

No. 7 Hofstra proved to be too much, as Jay Card and Adrian Sorichetti combined for seven goals in the Pride's 14-5 rout in the ESPNU Warrior Classic in East Hartford, Conn.

"We were outplayed in every facet of the game today, which is obviously very disappointing," said UMass coach Greg Cannella in a UMassAthletics.com interview. "We felt we were poor in our execution not only in our game plan, but just [in] the way that we play and obviously Hofstra is a very, very good team. Give them all the credit in the world and they took it to us."

The Minutemen (8-4, 3-2 Colonial Athletic Association) dug themselves an insurmountable hole early, falling behind 7-0 in the first 26:14 of the game.

"We didn't execute today," said junior defenseman Tom Celentani. "We didn't show up to play. We had a good game plan, but we just didn't execute it."

Meanwhile, Hofstra (12-1, 4-1 CAA) clicked on all cylinders, as its attack picked apart the Minutemen defense at will. The Pride outshot UMass by an astounding margin, 47-22, and dominated face-offs, 15-6, seizing possession for the vast majority of the afternoon.

The Minutemen shot themselves in the foot on their few offensive possessions, committing 17 turnovers, including six unforced errors.

"They outplayed us on offense," said Cannella. "They won every face-off, it seemed like, in the game and we didn't have the ball on offense at all. When we had the ball on offense, we either threw it away or we executed poorly in what we wanted to do."

Card led Hofstra with four goals, while Sorichetti earned his first career hat trick. Stephen Bentz, Jamie Lincoln and Lance Yapor contributed a pair of goals

Lecturer talks nuclear issues

By Melanie Muller
Collegian Staff

Dr. Kelvin Kemm, a nuclear physicist, spoke Friday at the University of Massachusetts at an event put on by the newly-formed Collegians for a Constructive Tomorrow (CFACT). Promotional posters advertising the event declared the talk's topics to be the "Japan nuclear disaster, the future of nuclear energy and nuclear energy in the Third World."

"I see that there are a large number of professors in the audience and I think this will raise the level of discourse," said Dmitriy Shapiro, chairman of CFACT's UMass chapter, during the event.

Addressing the roughly 20 attendees dispersed among the various rows of Integrated Sciences Building room 133, which has an approximate capacity of 90 occupants, Shapiro elaborated on the mission of CFACT and the role of Kemm's talk in helping to fulfill this mission. The event was co-sponsored by Gerald Peterson, a professor emeritus in the UMass physics department.

Asked later about how he became involved in sponsoring the event, Peterson said that it happened "by pure chance." According to Peterson, Shapiro had hoped that the physics department would sponsor the event, but the "department head would not do so" as Kemm "did not totally accept the common explanation of global warming."

Peterson said he decided that "in the interests of free speech and academic freedom, I let my name be used as a co-sponsor of the event."

"CFACT is a conservative group advocating free trade policies," said Shapiro. He said he disapproved of other conservative groups' engagement in unseemly behavior, such as throwing eggs at pictures of Al Gore, and hoped that events such as this would promote a more "intelligent discourse" between both sides on issues in the "Green War."

The Committee for a Constructive Tomorrow, of which CFACT is the student branch, was founded in 1985.

In addition to holding a Ph.D. in nuclear physics,

Manny held without a point against Pride

MARIA UMINSKI COLLEGIAN

Will Manny cuts against a Drexel defender. Manny finished without a point against Hofstra for the first time this season.

M.LAX from page 1

each in the 36th meeting between the two sides.

UMass finally caught their first break of the game in the final seconds of the first half. After the defense denied Hofstra's final scoring attempt of the half, senior Stephen Zorkers sprinted downfield and fired a shot from straightaway that hit off of Pride goalkeeper Andrew Gvozden's chest and crossed the line just as time expired to cut the deficit to 7-2.

The last-second goal did not produce the same spark as last Saturday, when sophomore Will Manny scored in the closing seconds of the third against Drexel to ignite a fourth quarter comeback. Instead, Hofstra responded with the first five goals of the second half to erase any likelihood of similar fireworks from the Minutemen.

The Maroon and White appeared to catch some life at the beginning of the fourth quarter. Trailing 12-2, UMass strung together three unanswered goals in an otherwise lopsided affair. Art Kell netted a pair of tough, grinding scores with 13:24 and 12:31, respectively remaining in the game, as the junior carved through the heart of the Pride defense to strike some momentum for the Minutemen. Less than a minute later, sophomore Colin Fleming fired a shot through Gvozden's legs to cut the margin to 12-5.

That was as close as UMass would get, as Yapor netted consecutive goals for Hofstra to put an end to the Maroon and White surge.

UMass-Hofstra has emerged as one of the top rivalries in college lacrosse. Despite Saturday's loss, the Minutemen still lead the all-time series, 19-16, including last year's 11-9 win on March 27 at Garber Field.

The Minutemen face the tough task of forgetting about this loss as they look forward to Friday's matchup with CAA foe Delaware.

"... You can take [Saturday] and think about the game but after [Saturday]...we're living in tomorrow and we [have to] move on and we [have to] focus on Delaware," said Celentani. "We still [have] a game left. We still control our own destiny so I think we'll be alright."

Cannella hopes his team has the mental toughness to put this loss behind them.

"You just say, 'Hey, this is over and you [have to] prepare for Delaware next week,'" said Cannella. "If it's a learning experience, hopefully guys take it personally and prepare themselves well for next week's game, but you don't get a lot out of this [game]..."

UMass returns home this week for its clash with the Blue Hens on Friday at 7 p.m. on Garber Field.

Stephen Sellner can be reached at ssellner@student.umass.edu.

UMASS SYSTEM IN THE NEWS

UML students part of design team on solar-powered house

By Jerry Kronenberg
Boston Herald (MCT)

Students from the Massachusetts College of Art and the University of Massachusetts Lowell have teamed up to design a solar-powered house that's so energy efficient you can literally heat it with a hair dryer.

"Our house uses 90 percent less energy for heating and cooling than a conventional house does," said Mass Art senior Spencer Culhane, 22-year-old project manager for the students' entry into the "2011 Solar Decathlon."

Held every two years by the U.S. Department of Energy, the Solar Decathlon pits teams from 20 universities around the world against one another in building homes powered by the sun.

Students must design and build fully furnished homes that offer plenty of creature comforts, but run exclusively on "green" energy and cost about $250,000 to build.

Competing in 10 events over 10 days, contestants must host dinner parties and "movie nights" in their solar houses, as well as run dishwashers, do laundry and perform other tasks people take for granted in "normal" homes.

The MassArt/UMass team is the only local entry in this year's confab, although the Massachusetts Institute of Technology and a Tufts University/Boston Architectural College group have competed in the past.

MassArt and UMass students have spent the past two years designing their two-bedroom, 925-square-foot solar home.

The 60-member team plans to initially assemble the modular home this summer in Boston's "Innovation District."

They'll later take the structure down and reassemble it this fall on Washington, D.C.'s National Mall for the DOE's competition.

A 21st century take on a classic New England gabled house, the students' home will get electricity and hot water from 28 solar roof panels.

The house also will feature super-efficient appliances and windows, as well as insulated exterior walls twice as thick as traditional ones.

Culhane said the house should run, over the course of a year, at what's called "net zero" – meaning it will use no energy from non-solar sources. The house will need some outside source of electricity in winter, but should generate surplus power in the summer that it can sell back to a local utility.

The MassArt/UMass team has been working on its design since 2009, when Culhane and two fellow students entered the competition as part of a class project about seeking grant money for sustainable architecture. (Each Solar Decathlon team gets $100,000 DOE grants, but must raise the rest privately.)

Originally just a MassArt project, the team quickly expanded to include students from the University of Massachusetts at Lowell, which offers one of the world's only solar-energy engineering programs.

UMass engineering majors have designed the home's mechanical systems, while MassArt students are handling everything from architecture to creating home furnishings.

"We want to utilize all 26 different (majors) at Mass-Art as much as possible to do everything – right down to the silverware and the art on walls," said team member Chelsea Kelley, 26.

After the Solar Decathlon wraps up this fall, students plan to put their solar home up for sale. Price: $100,000 – land and foundation not included.

Lowell hoping new University center will improve city's future

By Donna Goodison
Boston Herald (MCT)

Just as its famous mills are a symbol of the Industrial Revolution, Lowell officials hope the state-of-the-art UMass Emerging Technologies and Innovation Center – set to open in fall 2012 – will put the struggling city back on the map and at the forefront of the coming revolution in high-tech manufacturing.

"We're looking forward to this center being able to expand the breadth of the university's ability to do research that spins off new companies, as well as the depth and sophistication of their ability to do that in certain fields," said Adam Baacke, Lowell's assistant city manager for planning and development. "We definitely think that it bodes well for the city."

The center is a building that will "serve big ideas," according to University of Massachusetts at Lowell's Chancellor Marty Meehan.

"We believe the next industrial revolution will be fueled by the work that goes on at the Emerging Technologies and Innovation Center," he said.

The university last month raised the final steel beam on the four-story, 84,000-square-foot, $70 million center, which will house clean-room space, wet labs, engineering labs and plastics processing facilities for research and development in the fields of plastics engineering, nanotechnology, electro-optics and biomedicine.

Last September, UMass- Lowell was designated as a National Science Foundation Center for High-Rate Nanomanufacturing – one of four in the country – in collaboration with Northeastern University and the University of New Hampshire. The result has been more than $25 million in funding, according to Meehan. In partnership with the National Institute for Occupational Health and Safety, the center will focus on helping companies safely manufacture nano products.

"That's part of the reason why we really need a new cutting-edge research building that will house numerous labs for both bio- and nano-manufacturing research," Meehan said. "Nano products are likely to fuel the next economic boom. Existing products can be made more useful, cost-effective and durable through the use of nano elements."

The first floor of the Emerging Technologies and Innovation Center will serve as the new home for a national plastics museum, tying in with the school's internationally known plastics engineering program, according to Meehan.

Two-story bay rooms, meanwhile, will accommodate oversized equipment such as extruders and injection molding machines, and the center's clean rooms will be equipped to filter air at a very high level for sensitive research equipment including biochemical sensors to measure toxins.

The new facility will help UMass-Lowell attract additional researchers and further collaborate with industry, academic and government partners. University researchers already are working with 30 businesses and institutes in Massachusetts, and Meehan expects that to expand to 50 or 60.

"We expect to draw researchers from around the world to collaborate with faculty and students at the center, as well as work hand in hand with industry," Meehan said. "The opportunity for business to have access to this kind of research building will be key to us developing our partners."

The university is borrowing $25 million to build the center, which also will be financed with $35 million in state funding, and $10 million in federal and private money.

UMass-Lowell is talking to companies interested in naming rights for the building, its labs and lobby.

"This building is going to create revenue by bringing in more research, roughly 300 jobs and partnerships established with companies that will rent space and work with us," Meehan said.

A number of companies already have recently moved to the city in part because of their ability to partner with the university, tapping its graduate students as employees, its technical facilities and research expertise, according to Baacke.

"We fully anticipate that this new facility will broaden our ability to do that and businesses' ability to do that," he said.

SGA members pass altered version of tobacco motion

MARIA UMINSKI COLLEGIAN

Members of the SGA Senate last Wednesday discussed a measure that called for splitting the Student and Academic Affairs Organizing Committee into two branches.

SGA from page 1

nization next year and the need for students to have a specific body to deal with academic affairs.

"The idea is to split the student and academic affairs committee into two committees that are more focused," Barton said.

Rose added that "the way SAA is structured... is really ambiguous... what this essentially will do is allow for more senators to work on committee."

Speaker of the Senate Modesto Montero, who organizes the committee appointments, gave advice to those concerned with the motion.

"From a speaker stand point I think the concern I have is that even this year getting five people [the minimum needed on a committee]." Montero also remarked that the SGA "rarely talks about academics as an issue."

The motion ultimately did not pass.In other business, members voted to pass an amended version of a motion pertaining to a recent Faculty Senate ruling calling for the campus to go tobacco-free by July 1, 2013. The motion, which had its original version vetoed by SGA President Yevin Roh at a prior meeting, calls on Chancellor Robert Holub to delay approval and implementation of the measure. "It is relatively the same thing we had last time with two main changes," Rose, the motion's sponsor, said of the measure. "[Now we are] clearly stating that there was student input [in the tobacco-free rule], but for a policy of this level, there should be more."

Elsewhere last week, members passed a motion that aims to clarify judicial rules.

"If you've ever been to a judicial meeting there are many objections raised," said Rose, "and right now there is absolutely nothing in the bylaws on how to deal with an objection."

The new regulations were created with the input of Chief Justice of the Judiciary Chris Marquis.

Another adjustment to the rules is that the chief justice no longer has to write the majority opinion; now only he or she will write it only if in the majority.

"If [the chief justice] is in the minority it just doesn't make sense for them to write the majority opinion, they could just write whatever they want," explained Rose.

Motions to change the "vague" title and responsibilities of the Secretary of Outreach to Secretary of Public Relations and Recruitment and to allocate $2,000 to the Taiwanese and Chinese Student Association were also

Speaker believes nuclear power essential to South African future

NUCLEAR from page 1

Kemm is the CEO of STRATEK Business Strategy Consultants, and is founder of a lobby group called Green and Gold Forum. Kemm is also a member of the advisory board of CFACT and the author of two articles currently displayed on the front page of its website.

After being introduced by Shapiro, Kemm began his presentation by showing background information on South Africa. Kemm gave information on many aspects of South African life, noting that South Africa has 11 official languages and that hippopotami kill more South Africans than any other animal. He also showed a photograph of three South African college students in a hot tub with drinks, noting that "they're pretty much like college students here."

Additionally, before speaking about issues pertaining to nuclear power, Kemm presented a number of photographs and information on South African life – which drew reaction from one audience member, who was eager to hear more about the nuclear issues. Shortly after, Kemm switched to the nuclear topic.

"If you had a car which goes out of control and crashes, but the airbags worked and the passenger is fine, would you call it a disaster or say that car's safety features had functioned properly?" Kemm asked at the onset of his nuclear presentation.

Kemm went on to explain that the ear metaphorically represented the Three Mile Island nuclear plant meltdown of 1979.

"Three Mile Island is a success story," he stated.

He went on to explain that he believes nuclear energy to be essential in providing power to Africa, as coal availability is extremely limited. He promotes use of the Pebble Bed Modular Reactor in African electrical development. Kemm stated that solar and wind technology "have their place," but that he does not personally support them coming onto the African grid.

"Now, about Fukushima," said Kemm. After stating that it was not the earthquake but the tsunami that followed that caused the damage to Fukushima Daiichi nuclear power plant, Kemm said he believed it was unreasonable to expect that the plant would not be damaged by the earthquake. He also stressed that the plant was 40 years old and scheduled to be dismantled.

"It's a boiling water reactor. There aren't any boiling water reactors in the United States," said Kemm. "Maybe there are, but I don't think so."

According to reports by MSNBC and the Orange County Register, there are, however, 23 boiling water reactors in the United States of precisely the same design and age range as Fukushima Daiichi, one of which is located in Plymouth.

Kemm called the current 20 km evacuation zone at the Fukushima Daiichi plant a "gross overreaction." In his opinion, very little radiation has so far been released.

MCT

Dr. Kelvin Klemm discussed the effects of last month's earthquake and tsunami in Japan on the Fukushima nuclear powr plant.

"At this point, I wouldn't say a disaster has occurred," Kemm continued. "Only a little bit of iodine was released."

He further stated that he believes that the situation in Japan is different from the 1986 Chernobyl disaster in the Ukraine because the reactors have containment vessels at Fukushima Daiichi. Additionally, Kemm claimed that only 60 people were killed in the Chernobyl disaster.

Kemm, however, did not state where he derived his figures for the death toll attributable to the Chernobyl Disaster. The World Health Organization estimates that 43 deaths can be directly attributed to the disaster, while about 4,000 deaths are said to come from subsequent cancers. A more recent report by the New York Academy of Sciences, however, concluded that 980,000 deaths were attributable to the meltdown.

Kemm went on to state that he believes nuclear energy to be the future of the world's electricity, and that he hopes it will spread rapidly around the world.

"In a hundred years, I think people will look back and think 'why did they have any doubts about it?'" Kemm said.

From my cold, dead, liberal hands

Yaroslav Mikhaylov

It is time for the American liberal movement to embrace guns. Gun ownership is a heavily politicized issue in the United States, often being defined along party lines: if one supports rights to gun ownership, he or she is also likely to vote Republican; people who support gun regulations or even an outright firearms ban are more likely to vote Democratic. It is also a very touchy issue; it was not too long ago that then-Senator Barack Obama faced a firestorm of outrage after mentioning how rural Pennsylvanians "cling to guns or religion." Nor is it easy to forget actor-turned-gun activist Charlton Heston challenging the presidential candidate Al Gore in 2000 to take his rifle from his "cold, dead hands" or Sharon Angle threatening "Second Amendment remedies" against her political foes. However, upon closer examination, it is easy to see that gun ownership and liberal political ideology is not at all incompatible. In fact, gun ownership often goes hand-in-hand with many liberal political causes.

One such cause is environmentalism. Many gun owners want to maintain the right to own guns in order to engage in hunting. However, unless one is an avid squirrel-hunting aficionado, it is difficult to hunt in urban or suburban areas. Not only that, it is also dangerous. In order to hunt, hunters require relatively wild lands on which game can live freely and multiply. Basically, hunting and wildlife conservation – a big liberal political issue – go hand in hand. It also goes well with spreading awareness regarding human-rooted climate change.

If the liberal and environmental movements embrace hunters, they will gain access to a demographic that cares a lot about maintaining the environment. If hunters do not have to deal with the short-term political fear of losing their rifles, they may instead turn to their long-term political interest: conservation. However, what is the point of fighting to protect hunting grounds if it means losing the guns used to hunt? If liberals reach out to hunters rather than pushing them away, they may find a powerful voting bloc supporting their environmental agenda.

In fact, gun ownership often goes hand-in-hand with many liberal political causes.

Another cause that gun owners and liberals can agree on is the right to privacy. While from the general liberal point of view privacy is primarily concerned with such things as government surveillance, wiretapping and corporate sale of personal data, it also includes many other intrusions by powerful groups into the personal lives of ordinary Americans. To many gun owners, restrictive gun laws are just that. In fact, one way of looking at the issue is that it is hypocritical to say it is illegal for the government to know where you went for lunch while simultaneously claiming that it is okay for the same government to know where you put your gun away at night. By dispensing with the idea that privacy laws only protect things that are politically expedient, the American liberal movement can earn itself a lot of support from the gun ownership community in fighting against other cases of government over-reach, such as warrantless spying or intrusive searches at airports.

The best way to earn the support of gun owners, however, is to do away with the fable that guns cause crime.

A year ago, the United States Supreme Court struck down the 30-year-old ban on firearm ownership in the city of Chicago. But what about the resulting deluge of shooting sprees? Well, Chicago had 435 homicides in 2010, 23 less than 2009's 458 and less than half of 1992's 943, according to the FBI's Uniform Crime Reports. On the other hand, increase in firearm restrictions has, in some cases, been accompanied by an increase in firearm crime.

In Britain, for instance, the amount of injuries caused using non-air-powered weapons actually increased since the introduction of a near universal firearm ban there in 1997. Finally, in Switzerland – a nation that issues a firearm to every male citizen due to compulsory military service – has over two million privately-owned firearms in a nation of less than eight million people. Even with all those guns floating around, statistics on firearm-related deaths are negligible.

Considering the comprehensive positions on crime that many liberal and Democratic politicians hold, it is disconcerting to see their supporters continue to promote the myth that gun ownership causes violent crime.

Guns are not the enemy of liberalism, and neither are gun owners. Nor is a belief in the right to bear arms, enshrined in the Second Amendment to the Constitution of the United States, diametrically opposed to a liberal ideology. Gun owners are reasonable people who would love to support many progressive and liberal causes, but are afraid that the Democratic Party: make friends with gun owners, not enemies out of them. They may surprise you on Election Day.

Our school needs more cash

Mike Fox

The University of Massachusetts has provided many of us with the opportunity to educate ourselves about our passions, mature socially and figure out how to have a real impact on the world around us. For those of us who are in-state students, this has been the only affordable option. As for out-of-state students, they have benefitted not only from UMass' growing reputation, but also from the New England Regional Student Program that provides tuition discounts for students pursuing majors not offered in their state of origin. Put simply, we owe a lot to UMass.

The crisis facing our university, which can be seen as an example of what is facing many institutions of public higher education, is a shortage of money. As I mentioned before, the government is cutting back and public higher education is an easy target. And with many private options, the recent belief that people go into debt for the sake of a degree, and the fact that public higher education isn't a priority on political radars, these cuts can be made without second thought. But what this all means is less money for UMass.

Political ambivalence is a powerful enemy.

In the past several years alone, the administration has made significant budget cuts in order to save money. I have served on UMass' Budget Planning Task Force, a body of students, staff, and faculty that has regularly discussed these issues. The university has also found new and innovative sources of funding for and due to research within its walls, but the numbers still come up short.

Federal stimulus funds were able to help fund the university since its most recent fee increase in 2008, but those funds have dried up, too.

In moments of absolutely overwhelming odds and apparent political certainty, it becomes easy to resort to political shortcuts and generalizing of the groups involved. However, we all have something at stake here.

Of course you can call your state legislator and ask them to help fund our school. Tell your state representative to support Amendment 732, which asks the state government to pay for a $23 million cost-of-living increase for faculty and staff. This amount has been covered by the government in the past, but now the burden has passed onto the university. Potentially, this is one of the most significant expenses that an increase in our fees could pay for.

The phone call is the first step. The second is to just keep this issue alive. Have conversations about it with your parents and friends; most of all, just care.

Political ambivalence is a powerful enemy and if someone doesn't speak up for what they're passionate about, louder people will get the government to support what they care about – that's how democracy works. Despite all the arguments about a corrupted system where little value exists in speaking up and exerting force, people power is a tremendous force to be reckoned with. As popular sentiment in the Middle East topples dictators once seen as eternal titans, let us not forget our system can and does work. We just need to believe in it and speak up.

You are the father of that child

Stephanie Ambroise

So I've been thinking a lot about "slut pride," and why society seems so much against the notion of "hypersexual" women. This issue, to me, is more than a woman saying she likes to have lots and lots of sex; it's empowerment, it's a woman's choosing to use her body in a way that pleases her and that she is not ashamed of. Now, I'm not too keen on the use of the word "slut" to stand for such a powerful message, but I support the message all the same – society, not so much.

One of the main arguments that people always seem to use against women who enjoy sex is the fact that it's immoral for women to have sex often because only they can get pregnant. Now, yes, this is true, but it's both chauvinistic and invalid.

Now, yes, if a woman gets pregnant, she has to carry the baby in her womb for nine-odd months and then push it out. But that's just the physical reality of pregnancy, not the crux of the argument. What I usually hear are the words "responsibility" and "taking care of the kid" thrown around and finally it clicked.

That kid's DNA is coming from two people.

Wait a goddamn minute; both parties are responsible for a child. True, he doesn't give birth to it, but that doesn't make it any less his child. I feel as if the logic that women can't be too sexually active because they can have children perpetuates this idea that only women have children, but men do not. The dominant view is that women shouldn't have sex all the time because they can have kids but men can because they do not physically have kids; they just participate in the process and move on to sow their wild oats. What the heck is that stuff? The truth is if sex results in a pregnancy both parties are responsible.

I am aware that younger girls are less financially capable of taking care of children and that a baby puts a big wrench in any sort of educational plans, but if the father of the child is also helping out then the weight of responsibility is much easier to deal with. The fact is, if the father and his family help, it can help to ease the situation. Now, I know firsthand that this is not always the case, but again, but I feel the logic of this whole argument against true sexual liberation for women helps perpetuate the notion that men don't have to take care of their kids because it's the woman who is giving birth.

This all may seem self-evident, but I'm writing this article because I used to follow similar logic and I'm going to assume that I'm not the only woman who thought like this.

I'm writing this to debunk the silent but poignant implication in the argument that women shouldn't be too sexually active because they can have kids. Well, guess what? So can men. They're not giving birth and won't feel the pain, but at the end of the day that kid's DNA is coming from two people.

Now, sometimes the man takes care of the child, sometimes he doesn't, but to imply that a woman can't engage in sexual intercourse if she pleases because the responsibility of the child rests solely on her is completely chauvinistic.

Stephanie Ambroise is a Collegian columnist. She can be reached at sambroi@student.umass.edu.

Have your taco and eat it, too

Matthew M. Robare

At the beginning of this month, Wall Street Journal senior economics writer for the editorial page Stephen Moore wrote an opinion piece called "We've become a nation of takers, not makers," in which he argued that many of the problems the United States currently faces stem from how more people are employed by the government than the private sector.

"In government employment, tenure for teachers and near lifetime employment for other civil servants shields workers from this basic system of reward and punishment. It is a system that breeds mediocrity, which is what we've gotten," he wrote.

Moore concluded that the only way to "win the future" is "to grow the economy that makes things, not the sector that takes things."

Back in 2008, Bloomberg Businessweek contributing editor Bruce Nussbaum declared that "'innovation' is dead."

Well, I have news for both Moore and Nussbaum: innovation is alive and well; the American spirit of self-reliance, hard work and entrepreneurship remains vibrant and vigorous in the hearts of all the people.

I say this based on the news from America Online that Taco Bell is testing a new taco shell made out of Doritos. It's brilliant and may possibly wind up as the invention of the year.

Of course I'm sure some moral crusader, perhaps Mayor Michael Bloomberg of New York, will try to ban Dorito taco shells because eating them will contribute to obesity, like when he banned trans fats and smoking indoors. While I admire his concern for the health of New Yorkers, he needs to realize that most people there get plenty of exercise by walking everywhere, running from muggers and losing their appetites from the pollution and smell of the garbage fermenting on warm days.

But more than that, people who respond to the obesity problem by banning fatty foods or sending First Lady Michelle Obama out to talk to children about how important exercise is – something politicians have done since at least the 1960s, when President John F. Kennedy appeared in a "Superman" comic to promote his physical fitness policies – are being too negative.

You see, my solution doesn't just solve the obesity problem; it solves the water crisis and high oil prices as well.

As Moore argued, government "is an industry where we measure performance backwards." He wrote that between 1970 and 2005 spending per student in public schools doubled when adjusted for inflation and "standardized achievement test scores were flat."

If the obesity problem is left in the hands of the government, at best there will be no change in the scope of the problem over the next 30 years. However, it will be considered an inalienable human right to have a bureaucrat constantly harangue you and your family to ride bikes and eat celery.

Fortunately, I've come up with a private-sector solution that will not only make me a billionaire, but probably get me a Nobel Peace Prize one day, too. You see, my solution doesn't just solve the obesity problem; it solves the water crisis and high oil prices as well.

Fat is mostly excess energy in lipid form and generally contains a lot of water inside it. Fat cells don't like water and so water molecules get trapped in between the fat cells. Using liposuction, fat can be removed from the body of an obese person, the water separated and purified and the fat turned into fuel. Alternatively, obese citizens could be paid to ride stationary bikes connected to turbines to generate electricity, but I think that would work better if people did that as part of their rent. I wouldn't mind that; I could read a book while I whittled down my electric bill. Moreover, the body heat generated from all that biking could be used to heat the building in the winter.

I'm sure some of you scoff with objections like, "That's scientifically implausible. You could never collect enough human body fat to replace just one barrel of oil and it's probably not recommended to have multiple liposuctions."

Well, that may be so, but innovation always brings with it the possibility of great failure. We could all be using Friendster or MySpace now instead of Facebook, the iPad could have been the biggest bomb since the presidency of George W. Bush and "The Dark Knight" could have been the second-worst "Batman" movie of all time.

Innovators should find comfort in the words of former United States Vice President Dan Quayle: "If we don't succeed, we run the risk of failure."

Matthew M. Robare is a Collegian columnist. He can be reached at mrobare@student.umass.edu.

ARTS@DAILYCOLLEGIAN.COM

'Twelfth Night' production shines

By Melissa Mahoney
Collegian Correspondent

When the elements of trickery, androgyny, mistaken identity, cross-dressing and true love come together under William Shakespeare's hand, they can create only one thing – a damn good play. The University of Massachusetts Theater Department's production of Shakespeare's "Twelfth Night" takes a refreshing take on the comedy by setting it in the age of excess and jazz: the 1920s.

In this adaptation of Shakespeare's classic, the protagonist, Viola, is shipwrecked on the shores of Illyria during the opening scenes. Believing her twin brother Sebastian to have been lost at sea in the wreck, and wary of this unknown land, she assumes the disguise of a man and calls herself Cesario to find work. With the help of the sea captain who saved her, she enters the service of Duke Orsino, who is convinced that he is in love with the bereaved Lady Olivia. Lady Olivia, mourning the loss of her father and brother, absolutely refuses to see any suitors, Orsino included. The Duke sends Viola as an intermediary to Olivia, who, believing her to be a man, falls in love with the eloquent messenger. Viola then falls in love with the Duke, who also believes her to be a man. Thus, a love triangle emerges: Orsino loves Olivia, Olivia loves "Cesario," and Viola loves Orsino. With the added hijinks of the members of Olivia's household, the play is a hilariously captivating comedy of errors that enthralls the audience with everyone's misery.

The remarkably talented cast brings Shakespeare's text to life with a natural vibrancy. Brittany Costa plays Viola with an earnest energy that wins the audience over. Costa's portrayal of Viola's steadfast personality flows through her dual genders seamlessly.

As a testament to the well-roundedness of the cast, the secondary characters often shine just as brightly as the leads. Julia Piker's genuine portrayal of the devious Maria lends valuable support to many scenes. Sir Toby, adeptly played by Duncan Grossman, provides much of the bawdy humor, delivered with excellent timing and physicality. A highlight of the cast is the prudent Malvolio, given new life and endeared to the audience by Greg Boover's lively performance. Under Dawn Monique Williams' direction, the athletic cast is in constant activity and executes movements with perfect comedic timing.

Unusual for a play, the production makes music a central theme of the show. According to the UMass Theater Department's website, Director Williams' last two main stage productions at UMass were musicals, and that music proves to be her point of entry into the performance. While one might expect the more jazzy side of 1920s music, the show tends to focus on down-home blues, giving the performance a less glitzy, but more natural feel. Assistant Director Luke Reed composed original music for the pieces sung in the show. While these originals are very well done and are reminiscent of the period, they bring a modern flavor to the piece that 1920s loyalists might not appreciate. However, the performance is intended to relate to more contemporary audiences – as evidenced by frequent asides in modern vernacular – to hilarious comedic effect.

However, the 1920s are excellently portrayed through Costume Designer Erin Amelia White's beautiful costumes. With color palettes indicative of the age and unique styles for each character, the costumes truly heighten the experience. Olivia's first entrance is breathtaking due primarily to her flowing mourning clothes. The set, too, is reminiscent of the era, painted in a late-impressionist style. Its layout is deceptively simple, for its functionality is revealed in new ways throughout the performance. Viola's first entrance from the shipwreck is a highlight and testament to the skill of Scenic Designer Miguel Romero and Lighting Designer Jessica Greenberg.

The UMass Theater Department's production of "Twelfth Night" is a show that you do not want to miss. The exceptional cast, direction, and technical elements truly bring Shakespeare's work to life.

Twelfth Night is playing at the Rand Theater on April 28, 29 and 30 at 8 p.m. and April 30 at 2 p.m. Tickets can also be purchased through the Fine Arts Center Box office in person or by visiting their website.

Melissa Mahoney can be reached at mmahoney@student.umass.edu.

Andrew Ferko doesn't mind showing some skin as the male lead, Duke Orsino, in the University of Massachusetts Theater Department's production of William Shakespeare's "Twelfth Night."

Gorillaz rise with 'Fall'

By Josh Steinberg
Collegian Correspondent

David Albarn, co-founder and frontman of Gorillaz, has taken the band's newest album, "The Fall" in an experimental direction. Focused heavily on psychedelic electronic music, it sounds as if Pink Floyd and The Postal Service collaborated on an album. Suspense and buildup rule this album as different synthesizers and electronic bleeps take form to create abstract rhythms and melodies.

The album is very similar to Gorillaz's last project, "Plastic Beach" (2010). This entire album was recorded during Gorillaz Fall 2010 tour of "Plastic Beach," which explains both the album title and the similarities between these two projects. Albarn recorded "The Fall" entirely on his Apple iPad, which is a first in the music industry. The quality of the production is surprising given its origins; this album displays the potential capabilities of technology.

"Phoner to Arizona" is the leadoff track, which starts the album with a deep electronic beat coated by a plethora of synthesizers. The consistent use of synthesizers on almost every track gives this album a unique, alternative hip-hop sound. The high pitch, melodic synthesizer found in a few tracks sounds like it is greatly influenced by the 90s hip-hop classic, Dr. Dre's "The Chronic." "Shy-town" and "The Snake In Dallas" are two tracks in which this 90s, West Coast style can be heard.

Amidst a jungle of electronic mayhem, Albarn jazzes the album up and catches you off guard a bit with the inclusion of traditional instruments, such as the soft-sounding guitar on "Revolving Doors" and "HillBilly Man."

The core of the album differs from the rather smooth opening songs, as Albarn really starts going crazy with the electronic effects and sounds. At times the deep, slow bass makes the album seem to move in slow motion. The combination of the slow, droning bass and Albarn's alluring voice are relaxing yet trying at times.

On "The Joplin Spider" and "The Parish Of Space Dust," Albarn seems to hit his peak of abstract electronic fascination. "The Joplin Spider" starts off with synthesizers flailing in your face, sounding like the crossfire of an intergalactic battle. If one were to imagine what the Death Star sounds like when it breaks down, it would be frighteningly similar to this track. The track turns into a mash of synths battling for dominance, creating one great ball of noise.

On "Amarillo" and "Detroit," there is a sense of depression and loneliness illustrated through the sounds and lyrics. The combination of slow beats with somber-sounding lyrics could possibly express the anxiety and isolation Albarn was facing throughout the recording process.

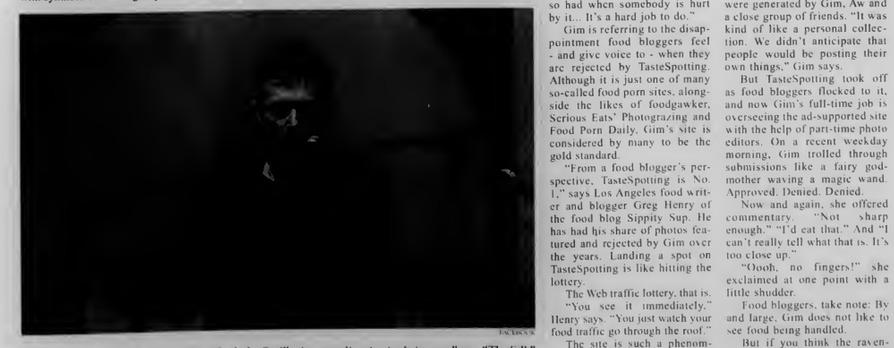
The standout on this album has to be "Bobby in Phoenix," which was co-written by Bobby Womack. Womack, who has collaborated with Albarn and appeared on Gorillaz albums previously, is best known for working along side soul legend Sam Cooke. His soulful influence makes itself known as this track breathes life back into this dwindling album.

The constant synth buildup of "California And The Slipping Of The Sun" sounds almost futuristic. Albarn's voice comes in softly and floats throughout the song, giving it a peaceful feel and a similar sound to Julian Casablanca's of The Strokes. Abruptly, the soothing sound of the track transitions into a heavy electronic sound. As it does with most of the album, the beat picks up and deep synths become more upbeat and rhythmic. The album then concludes with a 40-second yodeling track, which is the icing on the cake of a completely abstract production.

One's enjoyment of the album in entirely dependent on what type of mood one is in. If you are trying to party, get pumped, or even stay awake, you might want to skip this album for now. Come back to it on a slow day, when your mind needs to relax and wander a little. This album is like a labyrinth your mind could easily get lost in given the opportunity.

If you are a big fan of the original, more pop-sounding tunes off of "Gorillaz" (2001) or "Demon Days" (2005), you might grow a sense of hopelessness for the band. Albarn's sound grows more distant from its origins as he continues to experiment and explore deeper into the realm of electronica. This album has an almost eerie ring to it, but "The Fall" is definitely one worth listening to under the right circumstances.

Josh Steinberg can be reached at jssteinb@student.umass.edu.



Co-founder and vocalist David Albarn leads the Gorillaz in a new direction in their new album, "The Fall." Initially released digitally in Fall 2010, the album was recorded in its entirety using Albarn's iPad.

A place at her table

By Rene Lynch
(MCT) Los Angeles Times

LOS ANGELES - Sarah Gim certainly didn't invent food porn. But she's perfected it.

Gim runs TasteSpotting, a virtual buffet showcasing some of the most arresting food images available online with a collection that tops 140,000 stunning photos. The majority of the 5 million clicks logged each month come from visitors who graze with their eyes and gobble up kitchen inspiration and recipes. They drool. They lose themselves in the aspiration of it all. A red beet salad adorned with chives that were sprinkled just so. A snowflake cookie with impossibly perfect pink icing. And a plump fig, torn open and lovingly captured in a photo that is so simple, so transporting that it borders on heartbreaking.

It all looks so artful, so effortless. But there's a grittier side to the site. If you could pull back the curtain, you'd see food bloggers worldwide relentlessly vying for an audience with all those readers. As the gatekeeper, Gim can get as many as 1,000 submissions in a single day. But, alas, only a fraction land that coveted spot on TasteSpotting's home page. And the angry emails - "Why didn't you post my apple tart?" - can quickly pile up.

"I do sometimes feel like I am one of the most hated people in the food world," says Gim, who works from her spacious, sun-drenched home in Los Angeles. "I read the Twitter feed. I definitely know... I feel so bad when somebody is hurt by it... It's a hard job to do."

Gim is referring to the disappointment food bloggers feel - and give voice to - when they are rejected by TasteSpotting. Although it is just one of many so-called food porn sites, alongside the likes of foodgawker, Serious Eats' Photograzing and Food Porn Daily, Gim's site is considered by many to be the gold standard.

"From a food blogger's perspective, TasteSpotting is No. 1," says Los Angeles food writer and blogger Greg Henry of the food blog Sippity Sup. He has had his share of photos featured and rejected by Gim over the years. Landing a spot on TasteSpotting is like hitting the lottery.

The Web traffic lottery, that is. "You see it immediately," Henry says. "You just watch your food traffic go through the roof."

The site is such a phenomenon that there is a mock site, TasteStopping, that accepts the photos that Gim rejects. "I think it's funny," Gim says of this "rival" site.

The most common criticism leveled against TasteSpotting is that it's too subjective. Why did this photo get accepted while this other photo was rejected? And who is Sarah Gim anyway? Is she some kind of photo expert?

Gim, 36, is the first to admit there is an element of subjectivity. But the general guidelines - a photo should be sharp and well composed, it must look inviting or intriguing, it must link to a blog or a site that offers something substantial for readers - are all intended to lend harmony and order to the reader experience, and build toward a certain look that says "TasteSpotting."

"It would be easy to approve everything, but that kind of defeats the whole purpose," says Gim. (And indeed, even the most critical food bloggers concede that they don't want Gim to approve all submissions, as it would take away from the sense of accomplishment that comes with earning TasteSpotting's seal of approval.)

Food was never part of Gim's intended career path. She started her own personal food blog, the Delicious Life, in 2005 as a way to meld her obsession with food and food magazines with her career in online marketing.

TasteSpotting came along in 2007, started with Jean Aw of the popular online design site NotCot, but the two have since parted ways. In the beginning, the photos on TasteSpotting were generated by Gim, Aw and a close group of friends. "It was kind of like a personal collection. We didn't anticipate that people would be posting their own things," Gim says.

But TasteSpotting took off as food bloggers flocked to it, and now Gim's full-time job is overseeing the ad-supported site with the help of part-time photo editors. On a recent weekday morning, Gim trolled through submissions like a fairy godmother waving a magic wand. Approved. Denied. Denied.

Now and again, she offered commentary. "Not sharp enough." "I'd eat that." And "I can't really tell what that is. It's too close up."

"Oooh, no fingers!" she exclaimed at one point with a little shudder.

Food bloggers, take note: By and large, Gim does not like to see food being handled.

But if you think the raven-haired Gim wields this make-or-break power with impunity, think again. She is the picture of tension as she sits at her desk, which is actually a low-slung sideboard in her living room, and Gim uses one of the cubbyholes as a foot rest. Her dog, a Chihuahua named Daisy, scampers about as Gim clicks through a morning's worth of submissions, the equivalent of flipping through 25 cookbooks - or more - each day.

"I just don't know. Let me think about it. I'll come back to it," she says of one photo. She does this throughout the morning, repeatedly circling back to images that fall into a gray area - not perfect, but not bad either. "This is really hard. I don't like to say no. My preference is to say yes."

She does not have a quota for approvals, she says. And she tries her best to reply to every rejectee, typing out a few words explaining why the image was rejected, such as poor lighting or composition. Often, she makes a suggestion to bloggers after clicking around their site - "submit this image instead" - or refers someone to a list of links to photography tutorials. "Someone took the time to submit something, so I like to at least let them know. This is a community. And ultimately, if the photos get better and the submissions get better, then that makes the site better. I try to get to as many of these as I can."

The site documents the changes in food photography. In the beginning, it was all macro, super close-up shots. Now the "top-down" shot is in vogue. "And people are trying to tell a story with their photo. There's a lot more food styling."

Although the online food world is a close-knit bunch, particularly in L.A., Gim remains a bit of an outsider. She largely avoids the limelight. (While many food bloggers post photos of themselves on Twitter, or occasionally on their food blog, Gim does not. Her Twitter avatar is coyly cropped, making her unrecognizable.)

However, Gim will step out from behind the curtain next month when she is scheduled to appear at Camp BlogAway, a Big Bear-area gathering for food bloggers, many who are from Southern California. One of the most hotly anticipated panels? A Q&A with Gim.

She isn't likely to face a hostile audience. After all, she is the gatekeeper.

"I think they will be adoring her," says Henry. "I think there will be a lot of kissin' up."

Dearborn and Mineau helping Rams succeed

A-10 NOTEBOOK from page 8

Another pleasant surprise has been junior middle infielder Rachel Knable. Last season, Knable finished .252/.5/.21. So far this season, she's .307/.4/.22.

Temple also proved it can compete with Fordham and UMass. On March 26, the Owls split a home doubleheader against the Minutewomen, winning game 1, 7-1, and losing game 2, 12-2. On April 2, the Owls split an away doubleheader against the Rams, winning game 1, 7-4, and losing game 2, 6-4.

FORDHAM'S DOMINANCE

Fordham is exceeding their high expectations as well, as the Rams have occupied the A-10's top spot throughout most of the season.

Senior Jocelyn Dearborn and junior Jen Mineau are the main reasons for Fordham's conference-leading 12-3 record. Dearborn, who has started in all 48 games, is one of the nation's best hitters. The senior is leading the team in the Triple Crown categories (.391 average, 13 home runs, 36 RBIs). She also is a perfect 8-for-8 in stolen base attempts.

Mineau, who was elected to the Atlantic-10 All-Rookie Team in 2009, emerged as Fordham's all-time best pitcher last year, setting new school records in games started, complete games, complete game shutouts, wins, innings pitched, strikeouts, and ERA. This year, Mineau is picking up right where she left off, compiling a 15-7 record and a 1.69 ERA to go along with 192 strikeouts in 141 innings.

But it isn't just Mineau who is finding great success on the rubber for the Rams. Senior Chelsea Plimpton, who has thrown 20 more innings than Mineau, also has 15 wins and a 2.21 ERA.

Fordham has a crucial two-game series at UMass beginning on April 29. The series is sure to have major implications regarding seeding for the A-10 championships.

Plourde goes the distance for Minutewomen over weekend

SOFTBALL from page 8

their first loss in nearly a month.

It was another pitching duel in Game 2, as Plourde and Caira returned to the circle for their respective squads.

Plourde was able to return the favor, as she threw a complete game two-hitter and recorded five strikeouts to outduel Caira's complete game two-hitter and seven strikeouts in the Minutewomen's 2-0 victory.

UMass was able to manufacture its first run of the game thanks to the baserunning of Waldie in the second inning. Pinch running for Audrey Boutin after she led off the inning with a single, Waldie advanced to third on a wild pitch and then a ground out. The Orange's Jasmine Watson then threw the ball away in an attempt to double off Waldie, allowing her to easily score and give the Minutewomen a 1-0 lead.

In the fifth inning, after Teea Rogers led off with a single, she advanced to third following a sacrifice bunt and a groundout. With two outs, Matthew struck out, but Caira's wild pitch allowed Matthew to first and Rogers to score to improve the UMass lead to 2-0, and where it would stay as the Minutewomen successfully completed the split.

UMass had a day of rest before returning back to the diamond on Easter Sunday against GW, and little did the fans in attendance know that the Minutewomen would deliver them a basket of treats in their doubleheader.

Plourde dominated the Colonials in Game 1, pitching a complete game one-hitter and striking out 12 to help the Maroon and White to a 6-0 victory.

Tiffany Meeks and Magill were the highlights of the game, as they combined to go 4-for-6, including Meeks' fourth home run of the season, a solo shot in the fourth inning to right-center field in the blowout victory.

It was a different story in Game 2, however.

Plourde was given the nod to start once again for her sixth start in five days, but she was roughed up early by GW, which included a four-run second inning that put the Colonials up early.

Plourde settled down, though, as she only gave up one hit following the second frame, and struck out 10 batters to give her squad a puncher's chance at coming back.

"I really thought that Sara came back, regrouped, and pitched a really strong game [following the second inning]," said UMass coach Elaine Sortino.

That puncher's chance became realistic in the sixth inning. Facing a four-run deficit and with runners on first and second, Meeks singled to drive in Waldie, pinch running for Boutin, to score, making it a 4-1 ballgame. After Rogers reached on a fielder's choice to load the bases, Jordan Storro came through on an RBI single that drove in Maggie Quealy, who was pinch running for Stephanie Mayne, to reduce the deficit to 4-2.

That was all the scoring the Minutewomen could muster in the sixth, as Matthew flied out and Magill grounded out to end the inning. Plourde pitched a 1-2-3 inning in the top of the seventh to keep the game at 4-2 heading into the Minutewomen's last chance to break even.

Lindsey Webster led off and ripped a single to center field before Audrey Boutin charged into Clauss' 0-1 offering and drove it over the right field fence for a two-run home run to tie the game at 4-4. UMass was unable to capitalize further, forcing the game into extra innings.

Plourde gave up a double with two outs in the eighth, but was able to pitch out of the jam by striking out the next batter she faced. Storro and Matthew each led off the bottom half with singles, before Magill drilled a single of her own up the middle that drove in the game-winning run from Storro and a 5-4 Minutewomen victory.

"This is big for us because all parts of the lineup did it," said Sortino. "Everybody contributed to the comeback, and it's a young team. We're winding down [and] this was a big game for us in the conference. It meant a lot."

UMass will continue its homestand when it hosts Boston University for a 5 p.m. tilt on Wednesday evening.

Stephen Hewitt can be reached at shewitt@student.umass.edu.

Co-Existence:
Case Study in Gilboa-Jenin

A Presentation and Conversation with Government Officials from Gilboa, Israel

In the heart of the contentious conflict, people and governments are working together showing that cooperation and coexistence is more than an idealistic dream. Come hear about joint economic endeavors, educational initiatives and development programs that are bridging the gap between Israeli Arabs, Israeli Jews and Palestinians of Jenin. Think coexistence in the Middle East is unattainable? Come hear what has been developing over the past two decades in Gilboa for some good news.

Ten-game winning streak snapped

Minutewomen fall to Orange, rebound with sweep of GWU

By Stephen Hewitt
Collegian Staff

UMass	1, 2
Orange	2, 0
UMass	10
BC	0

Riding a 10-game winning streak, the Massachusetts softball team entered play this past weekend looking to continue its momentum with doubleheaders against Syracuse and Atlantic 10-foe George Washington.

The Minutewomen (22-15, 10-3 Atlantic 10) split their two-game set with the Orange (30-11, 8-5 Big East) on Friday afternoon before winning both games on Easter Sunday against the Colonials (14-23-1, 4-11 A-10).

Sara Plourde threw a complete game and struck out 15 in game one on Friday, but it was SU's Jenna Caira who got the better of her, also striking out 15 in a complete game one-hitter as the Orange won, 2-1.

Lisaira Daniels did it all for SU in its victory, as she went 3-for-4, including a solo home run in the third inning that put the Orange up 1-0 and ended Plourde's streak of 41 consecutive innings at home without allowing an earned run.

UMass nearly rallied back in the seventh as it had the tying and winning runs on base. Candace Waldie, pinch running for Stephanie Mayne, scored from second when Cyndil Matthew hit a comebacker at Caira, in which she wildly threw away to first base to narrow the score to one.

However, with two outs and runners on first and third, Kyllie Magill came to the plate and grounded out on the first pitch she saw, ending the Minutewomen's bid at a comeback, and giving them

Rams lead conference, Owls continue to shine with Marris

By Steve Levine
Collegian Staff

A-10 Notebook

Prior to the start of the softball season, Atlantic 10 coaches predicted Massachusetts to win the conference, with Fordham and Charlotte finishing in second and third, respectively.

As of April 22, the coaches weren't too far off, as Fordham led the A-10 with a 12-3 conference record and UMass sat in third with an 8-3 conference record. Charlotte, however, was in fifth with an 8-4 record. The biggest A-10 surprise is Temple, which finished with an 8-12 conference record last year. The Owls have taken a complete turnaround this year, compiling an 11-3 record, good for second place.

Much of Temple's success this year has revolved around senior Kristen Marris, who emerged as the staff's ace and one of the team's most dependable hitters in 2010. Marris posted a 2.65 ERA and a 13-15 record on the mound, while batting .290 at the dish. While Marris is playing up to her expectations this year (14-8, 2.33 ERA and a .373 batting average), it is her teammates that are making this year's campaign more successful than the 2010 season.

Temple's biggest surprise is freshman Stephanie Pasquale, who is leading the team in RBIs (30) and tied for first in home runs (6). She also owns a .355 average, good for third on the team.

The Owls have had additional surprises as well. Junior outfielder Christina Sykora has matured as a hitter, increasing her average 65 points from .257 to .322. Sykora had 12 RBIs last year, and has increased that mark to 21 this season.

See A-10 NOTEBOOK on page 6

UM swept by Xavier

By David Martin
Collegian Staff

UMass	0, 2, 7
Xavier	7, 9, 8

For the first time this season, the Massachusetts baseball team was swept in a weekend series by an Atlantic 10 opponent, as they took on Xavier at home on Earl Lorden Field.

The Minutemen (12-21, 5-7 A-10) were unable to generate much of anything offensively in Sunday afternoon's game, losing by a final of 7-0. The Musketeers (21-18, 6-6 A-10) pitching staff only surrendered four hits and three walks on the day, marking their best outing on the weekend.

The Maroon and White found themselves behind early, with starting pitcher Dennis Torres giving up two runs off of three hits to start the first inning. Torres would continue to face difficulty against the Musketeer offense, lasting only 4.2 innings while giving up eight hits and six runs, of which four were earned. Charlie Benson came in to pitch relief, scattering eight hits over the remaining 4.1 innings, giving up just one run. With the loss, Torres fell to 2-3 on the season.

On the opposite end, freshman Vinny Nittoli kept the UMass offense at bay, allowing only four hits and one walk over six innings, while striking out four. Nittoli would improve his record to 5-1 with the win.

The Minutemen's best chance to score came in the sixth inning, during which Nittoli started the inning with a four-pitch walk to sophomore Anthony Serino and followed with a single to center field by senior Eric Fredette. Serino would advance to third on a double play, but would be stranded there, as Nittoli earned a groundball out off the bat of senior Peter Copa.

In response to Saturday's inclement weather, the weekend schedule was altered to allow for a double header on Friday afternoon. The two games would prove to play out very differently in terms of offensive production for UMass.

In the first game, the Minutemen jumped out to a 5-1 lead going into the fifth inning off of RBIs by senior Matt Gedman, junior Tom Conley, and senior Kyle Multner. After loading the bases with three consecutive one-out singles in the top of the fifth, however, Ben Thomas would rip his first pitch of the at-but to deep center field, driving in three on a double. He would later score before the inning ended, tying the game up at five runs apiece.

The Maroon and White would not score again until the bottom of the seventh, an inning in which they drove in two runs off of Musketeer errors. Xavier would answer right back with two runs of their own in the top of the eighth, again tying the score, though this time at 7-7.

It would not be until the top of the 10th inning that the game's final run would cross the plate as UMass' closer, junior Leif Sorensen, would give up the run off of a single to Mark Elwell. Elwell would drive in Brian Bruening, who led the inning off with a single and was advanced to third on a sacrifice. The Minutemen would then strand runners on first and third to end the bottom of the 10th on a foul out by Copa.

The second game of the afternoon, a 9-2 UMass loss, would actually prove to be a pitcher's duel until the top of the fourth inning, following a questionable call at the plate.

With one out and runners on first and second, with UMass leading 1-0 at the time, Bruenning bunted a fair ball that was fielded by Conley. The play would have likely resulted in a 2-5-3 double play, but home plate umpire Gerry Bilodeau saw the bunt as foul and ruled the play dead. Bruenning would later double and drive in two runs, the start of a four-run top fourth inning for the Musketeers.

Xavier would later score five more runs in the top of the sixth, and would only yield the Minutemen one more run in the bottom of the seventh. The Musketeer pitching staff held UMass to just two runs off of eight hits, while the Minutemen staff spotted them for nine runs off of 15 hits.

In response to the double-header loss, UMass coach Mike Stone recognized the patience shown by the Musketeer staff, and the frustration of his own ball club.

"They made some good judgments in both games," said Stone. "Their pitching did a good job at frustrating our hitters, and that led to a lack of concentration in some of our at-bats. We had opportunities, as did they, and some worked while others did not. Their hitters were just able to capitalize better than we could."

David Martin can be reached at dmmartin@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Nina Sarcona holds the ball in a game earlier this season at McGuirk Stadium. Sarcona and the Minutewomen capped a perfect A-10 schedule with an 18-4 win over SJU on Saturday.

MICHAEL WOOD/COLLEGIAN

Peter Copa makes a play this weekend against Xavier at Earl Lorden Field. Copa and the rest of the Minutemen were swept for this first time this season in A-10 play.

UMass caps perfect A-10 slate

By Nicholas Bellofatto
Collegian Staff

UMass	18
Hawks	4

The Massachusetts women's lacrosse team concluded its regular undefeated Atlantic 10 season schedule by traveling to Saint Joseph's in Philadelphia and winning, 18-4 on Saturday. The win not only added an exclamation point to an already impressive season, but it also kept the Minutewomen undefeated in the Atlantic 10 Conference. Already having locked up the No. 1 seed in the A-10 tournament, the win over Saint Joseph's was a testament to the staying power and will to win by all players on the UMass team.

UMass head Coach Angela McMahon has been talking all year about playing as a unit and taking things one game at a time, and by doing so the team would put themselves in the best position to win.

"We approached Saint Joseph's with the same mindset we always come prepared with, and that is to just win the game," said McMahon.

Even though their final regular season game at Saint Joseph's carried no added weight because of the lack of tournament implications, the Minutewomen did not come out stagnant, instead coming out ready to play and, more importantly, ready to win. The Minutewomen opened the game against SJU by scoring first and scoring often. Their first three goals were scored in just a little over seven minutes of game time, and the Minutewomen would continue to pressure the Hawks. Saint Joseph's scored only one goal in the first half, while the Minutewomen tallied 12, giving them a huge advantage going into halftime.

Just over two minutes into the second half, junior Ali Houlis scored the Minutewomen's 13th goal of the game and increased a large deficit already facing the Hawks, who would only score three more goals in the course of the game.

The Minutewomen once again won almost every statistical category possible including shots-on-goal, saves, ground balls, draw controls, clears and free-position shots. Since the beginning of the season, the Minutewomen have been a very dominant team on the attacking side of the ball. However, in the last month of the season the defense has really stepped up its game and has been anchoring many UMass victories. In the final three games of the season, the Minutewomen defeated George Washington, Richmond and the Hawks. In those three victories, the Minutewomen defense let up a total of 14 goals, while the offense scored 53, giving them a plus 39 advantage in goals scored and goals surrendered.

"Our defensive play has really turned around during the course of this season, and that is a huge testament to our players and our core defensive players back there, but it is also a testament to our assistant coaches Sarah Albrecht and Eileen Finn who kind of run the defensive side of things," McMahon said.

Even though the defense and the play in net have both been very strong over the course of the season, it has elevated the team to a new level in recent games. Since the Minutewomen have such young team, these regular season experiences could prove invaluable for how the team fairs as a whole during the A-10 tournament and the NCAA tournament. McMahon pointed out the cliché phrase that defense wins championships, and she believes that the team is going to have to rely on the defense to help win games come the A-10 tournament.

"The cohesiveness is huge, they [defense] are working really hard together, they are communicating, and definitely stepping up," said McMahon. "The girls are faced with a lot of different opponents, so we have different game plans for everybody, and they are starting to see and understand the game a lot better."

The next time the UMass women's lacrosse team will step onto the field will be for the opening round of the A-10 tournament on Friday.

"We are coming into the tournament with the same approach we have been using all year, but with more of a sense of urgency because it is one and done, and we have to make sure that we are taking care of business and playing to our capability," said McMahon.

Nicholas Bellofato can be reached at nbellofa@student.umass.edu.

Amherst bank held up Mon.

Police arrest William Oldershaw on charge of unarmed robbery

By Sam Butterfield
Collegian Staff

Amherst police have made an arrest in the Monday morning robbery of a downtown Bank of America branch. Police responded to a 10:54 a.m. call from bank employees at the 1 South Pleasant Street branch stating that a male had recently entered the bank and handed staff a note stating that the bank was being robbed and demanding an undisclosed amount of money, according to a release from Amherst Police Department Lieutenant Ronald Young.

The suspect did not appear to have a weapon, the release stated, but employees complied and gave him an unspecified amount of cash.

According to reports, the suspect then entered a waiting taxi cab and fled the scene.

Officers responding to the call then spotted a taxi on West Street in South Amherst near Bay Road, according to Young's release, and found 24-year-old William W. Oldershaw, who resides at 42 Amherst Road in Sunderland, inside.

An earlier report in the Daily Hampshire Gazette stated police scanners had indicated the suspect fled in a gray or brown minivan reportedly being driven by a woman. A gold Chevrolet minivan matching that description could be seen late Monday afternoon about 20 feet off the northbound side of West Street, also known as Route 116, opposite Hampshire College, with several officers around the vehicle analyzing the scene.

AMHERST POLICE DEPARTMENT

Amherst Police arrested 24-year-old William Oldershaw Monday afternoon on charges of unarmed robbery of the downtown Bank of America branch.

HANNAH CHOI/COLLEGIAN

Although the branch closed after it was robbed, employees could be seen inside the downtown Bank of America Monday afternoon talking to police and conducting business.

The bank remained closed throughout the day Monday, as APD Chief Scott Livingstone stood outside the branch informing customers it would be closed. An APD officer also stood guard in front of the bank throughout the early afternoon, while several police cruisers could be spotted parked on South Pleasant Street downtown.

According to Young's release, Oldershaw will be held at the Hampshire County House of Corrections in Northampton in lieu of $2,500 cash bail. He will likely be arraigned this morning at the Eastern Hampshire District Court in Belchertown on a charge of unarmed robbery. According to Massachusetts criminal sentencing guidelines, that charge can carry a sentence of 12 to 36 months.

Sam Butterfield can be reached at sbutterfield@dailycollegian.com.

Hillside Salon brings area artists to campus

University of Massachusetts Chancellor Robert Holub and his wife Sabine will welcome artists and community members to their on-campus home today for Ms. Holub's monthly Hillside Salon event.

The gathering will bring together four area artists and will focus on landscape painting, multimedia art and sculpture, as each artist will be allotted 20 seconds per slide to showcase up to 20 slides.

At this month's Salon, attendees will first be treated to the work of Ali Moshiri, a painter and a doctor, according to an April 19 release. Moshiri trained in art psychotherapy at the Austen Riggs Center in the Berkshire's Stockbridge, Mass., under the guidance of seminal art psychotherapy practitioner Leo Garel, until Garel's death in 1999. According to the release, Mr. Moshiri bases his work on his "observations from nature, primarily landscape." In his recent work, though, Moshiri has drifted towards more abstract painting, still drawing from nature as a source. Moshiri's work has been displayed at the Fauve Gallery here in Amherst, according to the release, and has also been featured at the Image Gallery in Stockbridge.

The second artist to display his work at tomorrow's Salon will be the Worcester-based Michael Tillyer. Tillyer is a graphic artist and a sculptor whose works have been featured at a variety of museums across the Commonwealth and elsewhere, including the Museum of Fine Arts in Springfield, the Chesterwood museum and the Lynhurst Museum, according to the release. Tillyer trained under the mentorship of Peter Forakis, Charles Ginnever and David Rohn, the release states. He presently teaches an online art course at Holyoke Community College.

PAUL SAVOIE

Multimedia artist Michael Tillyer will present at tomorrow's Hillside Salon.

Third to present will be "intermedia artist" Burns Maxey, who seeks to use a variety of contemporary and historical artistic methods to focus on "place and narrative," according to the release. Maxey's work typically incorporates video, performance art, audio, photo imagery, sculpture and painting, according to the release, utilizing a medley of media to tell a more encompassing story. She has displayed her work in Boston, San Francisco, New York and around the northeast, the release states, and will

Prof. Sinha to lecture on abolitionism Weds.

If the once-simmering conflict over slavery and states' rights still stirs blood in your veins, you may be in luck: an associate professor of history at the University of Massachusetts will be addressing whether abolitionists may have sparked the Civil War as part of the Distinguished Faculty Lectures Series Wednesday at 4 p.m. in the Massachusetts Room, on the third floor of the Mullins Center.

Associate Professor of Afro-American Studies and History Manisha Sinha, who holds an undergraduate degree from Delhi University, a master's in history from State University of New York Stony Brook and a master's of philosophy and a Ph.D. in history from Columbia University, will give present a lecture titled "Did Abolitionists Cause the Civil War?" marking the sesquicentennial of the start of the Civil War. The talk will address the role of abolitionists in the conflict, according to a Friday release from the UMass Office of News and Media Relations, and will examine how abolitionism arced from a fringe movement calling for social change to a major political party standing against slavery. She will also consider what the release calls the "often overlooked" role African Americans had in abolitionism and discuss the impact of the war's states' rights debate in the contemporary polemic.

According to the release, Sinha is a widely-published historian, having authored "The Counterrevolution of Slavery: Politics and Ideology in Antebellum South Carolina" in 2000 and more recently published co-editing "Contested Democracy: Race and Power in American History" in 2007 and "African American Mosaic: A Documentary History from the African Slave Trade to the Twenty First Century," with John H. Bracey Jr. in 2004. She is also currently working on a history of the abolitionist movement, which will be titled "Refining Democracy: African Americans and the Movement to Abolish Slavery, 1775–1865."

UMASS.EDU

Associate Professor Manisha Sinha will lecture on abolitionism's impact on the Civil War Wednesday.

UMASS.EDU

"The Counterrevolution of Slavery: Politics and Ideology in Antebellum South Carolina" is among Sinha's works.

Sinha came to UMass as an assistant professor in 1994, according to the release, and became associate professor in 2001.

Upon completing her lecture, Sinha will be presented with a Chancellor's Medal for earning distinguished faculty status. The medal is "the highest honor bestowed on individuals for exemplary and extraordinary service to the campus," according to the release.

Environmentalist Tripp to talk Conn. River's import Tues.

While rivers may have once been a foundation of transport, shipping and a crossroads of people and cultures, some may take for granted their ongoing significance. But not Nathaniel Tripp, a member of the Connecticut River Joint Commission, a two-state council comprised of representatives from New Hampshire and Vermont which examines issues facing the river.

Tripp will present a lecture titled "The Connecticut River: A Confluence of People, Place and Environment" Tuesday at 4:30 p.m. in the Cape Cod Lounge of the Student Union at the University of Massachusetts, according to a Friday release from the school's Office of News and Media Relations.

Tripp, who represents Vermont on the Commission, has worked with a variety of figures from residents to business owners to politicians and lobbyists in dealing with issues facing the Connecticut from sustainability to transportation needs, according to the release.

He is also the author of the 2005 "Confluence," which illustrates the myriad manners in which rivers connect people.

Tripp's lecture is being sponsored by the Environmental Institute, the geosciences department and the UMass public history program, as well as the Five College sustainability seminar series, according to the release. The talk is free and open to the public.

According to his profile on the Florida-based literary agency Dwyer & O'Grady, Tripp lives on a hillside farm in Vermont, where he has resided for some 30 years. At his farm, he raises sheep and vegetables, his page states. The Vietnam War veteran has also alternately worked in film and television and also authored a memoir, "Father Soldier Son," published in 1996 by the Steerforth Press. He has also authored several children's books, including "Thunderstorm," published in 1994 by Dial BYR, and "Snow Comes to the Farm," which appeared in 2001 from Walker Books.

According to its website the Connecticut Joint River Commission is a partnership between both northern New England states' governments and "businesses, farmers, conservationists, and other citizens." The Commission attempts to create "a strong and vibrant economy while conserving the natural wealth and beauty of this special place."

Dig nets artifacts; next dig set for Sat.

On Saturday, the Amherst History Museum and the University of Massachusetts history department cosponsored a preparatory archaeological dig at the museum's 18th-century Strong House site.

Museum staff and UMass professor Brian Jones took measurements of the property and sought to ready it for an April 30 dig which will bring together the museum, UM faculty and middle school students participating in the town's free archaeology program.

According to a Monday release from museum representative Patricia Lutz, the trial pit showed the site will likely contain numerous historical artifacts, including a blue and white china sherd, a fragment of pottery.

The formal dig will take place Saturday, and reservations can be obtained by contacting the museum at 413-250-1956 or by emailing amhersthistory@yahoo.com.

—Collegian News Staff

"If we don't believe in free expression for people we despise, we don't believe in it at all." -Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Stop saying 'No homo'

Most young people have witnessed some variation of the following scenario: a group of males are in conversation. One of them, the speaker, is either describing his admiration for another male or saying something purporting to be effeminate. Then he says, "No homo," reassuring his compatriots that he is not gay.

Dean Curran

The phrase is, of course, used on Facebook, as well. One girl I know had a profile picture of herself at the camera as a golden retriever licked her face. The caption said "rest in peace," an homage to her deceased dog. Some guy commented "no homo cutest picture... again said no homo." He felt the "need" to reiterate it twice. One of the girl's friends later commented "you only say no homo if you say 'cute pic' to a guy." To this, the male responded, "no I say no homo when something I say sounds homo." He further explained that to say, "'what a cute pic' about anyone sounds homo, coming out of any guy's mouth."

Why do some males constantly feel the need to reassure friends of their heterosexuality? This phrase stigmatizes homosexuality and perpetuates a narrow understanding of masculinity. I am not saying that everyone who says "no homo" is stupid or hateful. But this phrase is a problem that must be addressed. "No homo" is an expression of insecurity and homophobia that males need to both stop saying and discourage others from saying as well.

The phrase was popularized by rap music, and has now seeped into dorm rooms and dining halls everywhere. Cam'ron, Lil Wayne, and Kanye West are all known for their prolific use of "no homo," yet these rappers are highly homoyant. Cam'ron and the Diplomats wear pink and purple furs, Kanye is a fashionista, and Lil Wayne has been photographed kissing his mentor, Baby. According to Jonah Weiner of Slate Magazine, the phrase "can seem a bit like a gentleman's agreement, nodding to the status quo while smuggling in a fuller, less hamstrung notion of masculinity." To Weiner "no homo" is "still a concession to homophobia... in a way, it's progress."

I cannot agree. Using the phrase does not promote a more complete understanding of masculinity because it still tells a man he must explain himself for behaving in a way that could be considered "gay."

Furthermore, "no homo" is more than a "concession" to homophobia - it is an active promotion of it. Though Kanye West spoke out against gay bashing in 2005, he has contributed to the stigmatization of the LGBT community by using "no homo" in his songs repeatedly.

"No homo" is an expression of insecurity and homophobia that males need to both stop saying and discourage others from saying as well.

Saying "no homo" implies homosexuality is negative, and that men must bash being gay to insure their place as hetero is inherently assumed. Despite the fact that the phrase can be cleverly inserted into their rhymes, rappers are upholding an exclusive, hateful, and limiting definition of masculinity by saying "no homo."

People use "no homo" as a way to insulate their words from the scrutiny of common gender conventions, real of perceived.

Guys sometimes use it as a disclaimer, for they fear that what they are about to say defies gender binary norms and will earn them ridicule from their peers. Or men use the "no homo" banner as a postscript, assuring their peers that they did not mean to imply anything but hetero-masculine feelings by their previous, possibly nuanced statement. But people who are confident with themselves and their sexuality do not feel the need to defend their masculinity by saying "no homo."

It is understandable why so many males lack confidence, especially when expressing warm emotions leads to taunting and teasing of potential homosexual feelings.

Peer groups and the media constantly impose and reinforce unreal stereotypes of masculinity, especially on men of color. But using this phrase only serves to legitimize and perpetuate these unreal stereotypes, and make "no homo" users appear unsure of themselves.

Men are almost always the ones to say "no homo," but sometimes women say it, too. Females using the phrase are no less damaging than males employing it. In addition to slandering gays and lesbians and imposing an unreal sense of masculinity on men, it reinforces restrictive female gender roles. "No homo" brands certain activities as exclusively feminine, which limits the range of acceptable behavior for women.

We must stop saying "no homo" because it is a phrase which promotes homophobia and a narrow understanding of masculinity. But not saying it is not enough to end its deployment. We must discourage others from proclaiming "no homo" by telling them why it is detestable. I admit that for years, I have only been silently irritated when I have heard friends of mine say "no homo." But last night I saw "Phallacies," a performance addressing many issues of masculinity, here at UMass.

One of the skits, called "Masculinguistics," defined sketchy terms used by men, and "no homo" was one of them. I learned my silence only enabled my peers to continue slandering homosexuality. We must confront homophobia and our culture's narrow understanding of masculinity in all forms, including "no homo."

Dean Curran is a Collegian columnist. He can be reached at dmcurran@student.umass.edu.

Hip-hop-ocrysy

I remember when it started: on a bus full of middle school girls, on a camp field trip to Canobie Lake Park. The song "Hot in Herre" by Nelly played two or three times on the radio on the trip there, and a chorus of preteen girls sang "I am gettin too hot, I wanna take my clothes off." I was one of those girls, and I realized then that I loved to listen to rap.

Lauren Vincent

Why? It made me feel cool, I guess. It made me feel like I was older, wiser, sexier than my awkward seventh grade self. Not to mention listening to it in the car and hearing my parents' disgust with it was satisfaction enough to my budding individuality. I just liked it; that was all.

I enjoy the beat of the songs, but I also enjoy the rawness of the lyrics.

I got "The Eminem Show" on CD soon after that. My mom wouldn't let me get the uncensored version with the oh-so-awesome Parental Advisory sticker, but best friend's did, so I got the full brunt of it every time I went to her house. And it was great. We'd lie on her bed and listen to him spit rhymes about hating his mom, wanting to kill his wife/ex-wife/fiancée, and growing up in the slums of Detroit. We pretended that we could relate.

I developed the same admiration for Marshall Mathers as many females do. Could I explain it? Not really. Can I explain it now? Not really. I guess it was just hardcore and rebellious, and I was an adolescent. I remember I had an argument with my English teacher in seventh grade about him. She said she couldn't understand how I could say I loved someone who hated women so much, and I'm pretty sure my reply was something along the lines of, "No, he just hates Kim." (I don't know if I knew then about the song "Kim," where he raps about brutally murdering his wife, but I really hope not, since I was 12).

I continued to love Eminem for years and never felt so harshly offended by his lyrics as to stop. I defended it by saying, "Oh, Eminem just hates everyone, not just women."

I don't know why that was justification for admiring someone, as I normally don't find such a quality attractive in a person. And I still occasionally listen to him.

I admire a lot of songs of his, because of their emotion. But I find it disturbing that so many people connect with his violent and sexist lyrics and that apparently I did in seventh grade.

Last year, I went to the Ludacris concert. I listened to him sing the song "You'z a Ho" which was followed by the song "Hey Ho," which asks, "If men sleep around we some players, but for women they be saying hey ho."

I quietly pointed out that he should ask himself that very question, but I still enjoyed the rest of the songs and ignored the entire chorus from that one song.

Hip-hop culture fascinates me because its stories are an examination of society's biggest problems, but it rarely offers solutions, and it glorifies violence and misogyny as a result. I enjoy the beat of the songs, but I also enjoy the rawness of the lyrics. It's all engrained on my musical tastes, and that makes me a part of the problem. I'm still listening to Eminem, though many of his songs leave a sour taste in my mouth when I think about the lyrics. I am in an unhealthy relationship with hip-hop. I am dependent on it, and effectively in love with it, while it hinders the progress and the changes I want to see. What am I to do?

Will I ever stop listening to it? I hope so. But then what happens? I throw out all those old CDs, delete the songs from my iTunes, but what difference does it make? Not enough. There will still be girls out there listening to it and thinking the best thing they can do is take their clothes off. There will still be boys thinking the solution to problematic situations is to engage in domestic violence.

I think we need to examine why some of us as women fight so hard to be heard and then put headphones on and listen to music that's effectively telling us to shut up. I wish I could voice my concern without sounding like a hypocrite. I'm trying to break out of this hold hip-hop has on me. I'll let you know how it goes.

Lauren Vincent is a Collegian columnist. She can be reached at lvincent@student.umass.edu.

I may be fading into irrelevance, but write for Ed/Op and claim your 15 minutes of fame.

IP doesn't bind the universe together

Crunch time is upon us, and if only I meant cereal. We're at that time where the average student would happily (tiredly) sell his soul to Beelzebub for an extra day to study.

The wild student's natural repose has always been (since the 1990s) in cyberspace -- there's no escape like a fake one. Many college students have stumbled upon a project called "AT-AT for America," a plan to build an AT-AT in the Great Plains, in recent months. If you've watched "Star Wars" the obligatory minimum of 10 times (required for citizenship), then you know that an AT-AT (All Terrain Armored Transport), or Imperial walker, is a gigantic (around 70 feet tall) death machine on four legs whose only weakness is a Jedi or a plane with a rope. St. Anselm defined God as "that which no greater can be conceived," so he was basically making an early step in the AT-AT project, because it's pretty hard to conceive of anything greater than an AT-AT. The question of whether creating an AT-AT can be achieved far outshines the one that asks what it would be once finished - "awesome" seems to be the appropriate answer to that.

Mark McDonough

Rebels would be represented by a fish creature who leads rebel forces in space, until Lucasfilm sent the college a humorous letter about how the admiral was unavailable as he was busy fighting evil in another galaxy. Although I have to give Lucasfilm kudos on the letter, I don't on the decision.

Why not let the college nerds have their fun? If anything, it would be free advertising.

These aren't isolated events. There's a documentary set to come out this summer titled "The People vs. George Lucas." It will address the many issues fans of Lucas' franchises are angry about (including the three prequel "Star Wars" movies and "Indiana Jones and the Kingdom of the Crystal Skull"). He's been parodied countless times by shows like "South Park," "Robot Chicken" and "How it should have Ended," though that's stock and store for anyone of his fame. If you Google image search "Han shot first," you'll find images of him wearing an anti-himself t-shirt with the words "Han shot first" in reference to the way he digitally changed a scene in the first "Star Wars" film to make Han's character less of a dirtbag. The phrase has become a sort of rallying cry for nerds across the country.

The headline "Giant AT-AT Imperial Walker Destroys East Manhattan" could only make Lucasfilm more money.

For over a week, donations and offers of free labor have poured in to the Oklahoma man (nay, visionary) Mike Kochler who is putting the whole thing together. The project has over 2,000 Facebook fans, "Attack of the Show" picked up on it, and, with time, real television shows probably would have as well.

Speaking of selling souls to Beelzebub - one of George Lucas' trapped souls, whose sole job is to Google "Star Wars" and make sure no one is doing anything fun with their idea, came across it, as well (perhaps while studying on the extra day Lucas granted him before exams). No matter how I try, I cannot figure out why they made the AT-AT for America project stop, but they did. The headline "Giant AT-AT Imperial Walker Destroys East Manhattan" could only make Lucasfilm more money - isn't that why they've put out loads and loads of crap since "Return of the Jedi?" It would be the most exciting thing "Star Wars'" has done since the revelation (spoiler alert!) that Darth Vader was Luke Skywalker's father.

This isn't the first time Lucasfilm has stepped in like the federal government and told fans to stop the horseplay. When the University of Mississippi wanted to replace its mascot, Colonel Rebel (for understandable reasons), there grew a large group of students who endorsed Admiral Ackbar (of "It's a trap!" fame). It looked very possible that the Mississippi

In any case, the AT-AT for America project picked up momentum at an alarming rate. One retired submarine officer wrote a letter asking the creator of the project why, if so many volunteers and so much money are going to his project, big problems (other than the lack of AT-AT walkers) in the country can't be fixed. I suppose it was an obvious question, though significant. The answer, of course, is that we're not willing to devote our time, money, and energy to feeding the hungry or sheltering the homeless. In any case, that's too close to preaching for a half decent article (I aim high).

Other questions arise, less poignant, though still important. To what degree is "intellectual property" property? The workman (artist) deserves wages, but these people at the University of Mississippi didn't want to write books set in the "Star Wars" universe which throw Lucas' whole plan for the future off kilter (I'm sure nobody wants that...), they wanted to use a minor character as a school mascot.

The AT-AT for America people weren't trying to sell pirated copies of "Star Wars" DVDs, they were trying to build a machine that looks like something from the film, and does Lucas really have the right to deny them that?

Mark McDonough is more machine now than man, as well as being a Collegian columnist. He can be reached at mamcdonough@student.umass.edu

The Raveonettes rock Pearl Street

Danish rock duo the Raveonettes performed at Pearl Street Nightclub in Northampton last Monday night. The band is touring in support of their latest album, "Raven in the Grave," which was released earlier this month on Vice Records. Sharin Foo, pictured above, provides bass, guitar, and vocals for the band, which is known for its vocal harmonies.

Bias honored in film

By Ellie Rulon-Miller
Collegian Staff

While the number of sports-related documentaries being produced is constantly growing, ESPN has a growing knack for delivering the most interesting and compelling stories in this cinematic format.

The network's documentary series "30 for 30" contains 30 films by different filmmakers, each of whom "[brings] their passion and personal point of view to their film detailing the issues, trends, athletes, teams, rivalries, games and events that transformed the sports landscape from 1979 to 2009," according to the "30 for 30" official website.

Among these stories is the tragic story of the death of Len Bias, a University of Maryland basketball player who died of cardiac arrest after an accidental cocaine overdose while celebrating his first-round selection to the Boston Celtics with some friends in June of 1986. He was 22 years old.

The film, titled "Without Bias," was directed by Kirk Fraser and released in 2009. Fraser took on a significant challenge in creating this film; because Bias died so long ago that he had to rely almost entirely on footage of the basketball player in games. Most of the non-interview footage included before the story reaches the point of its subject's death is of Bias effortlessly sinking shot after shot.

The interviews conducted in "Without Bias" are what make the story so gripping. It is made abundantly clear that Bias' death was a tragedy in the truest sense, striking people from across the country and creating a huge commotion. Each statement made by every contributor on the player and his end was completely relevant and extremely compelling.

What makes the interviews even more interesting and important is the fact that the film uses such a large number of them. Fraser's documentary shows people from every aspect of Bias' life: his family, friends, teammates, coaches, sports broadcasters and news anchors. There is even stock footage of people with unknown relationships to Bias mourning his loss.

The timing in the film is impeccable as well. No piece of Bias' story is dwelled upon for too short or too long a time. "Without Bias" does not drag at any point, a quality that a lot of documentaries unfortunately possess. Even in discussing the most personal emotions about Bias' death, there are uncomfortable moments.

The display of raw emotion in the documentary adds even more to its power. Statements from his mother and a clip of the 911 call made by his friend Brian Tribble, who was present for the tragedy and was brought to trial as being responsible for Bias' death (he was later found not guilty), make it impossible not to hold viewers' attention. Bias' mother, Dr. Lonise Bias, stated that after a tragedy as great as this one, you become more sensitive to the world around you.

"You can't even imagine why the sun is coming out," she says in the film.

This pure honesty is perhaps the most compelling aspect of the documentary. Even though over 20 years have passed since the tragedy, people with varying degrees of closeness to the late athlete still become just as emotional as they did on the day they learned of Bias' passing. Bias, known as "Frosty" to friends and family, had a greater impact on the country than the people around him had known. His mother said the first flowers the family received were from Michael Jordan, a competitor of Bias at the time, and that she "[remembers] receiving cards from the President and Mrs. Reagan," she said in the film. The Bias family suffered another tragedy a few years later when Len's brother Jay was shot to death outside of a mall. According to the film, Dr. Bias has been working with young people and talking about drugs and violence ever since the death of two of her sons.

The film is not overwhelmed by talking-head interviews as it utilizes archived news footage from Bias' college basketball days to his funeral to news footage of the passing of his brother. Each well-chosen clip shows the impact Bias had on the basketball world and the country as a whole.

Despite the fact that the documentary lacked a significant amount of original footage other than interviews, it is extremely powerful and is still 100 percent successful in telling the story of Len Bias.

Latest from Mortal Kombat: fresh start of fatality for series?

By Jeff Mitchell
Collegian Correspondent

In this fast-paced, ever-changing world of ours, the only way to stand out is the bloody dismemberment of your competitors. "Mortal Kombat" (Mortal Kombat 9) revives the dying arcade fighter franchise like an adrenaline needle ripping through the chest of a withering geriatric. This new installment of the long and legendary fighting series brings back the old-school feel with a few new and pleasant twists.

This game showcases all the old favorite characters, including Sub- Zero, Scorpion, and Liu Kang from the original game, focusing on the roots that made this nearly 20-year-old franchise so popular. The game play is inviting to new players, so those newnew players to the "Mortal Kombat" series will not feel overwhelmed. Those latest installment of the "Mortal Kombat" franchise introduces the X-ray attack feature, which acts as a super move that is unique to each character and delivers crippling blows to opponents. The X-ray attack feature also allows players to see past the skin and into the skull-cracking carnage. This fresh addition spices up the series, which has been getting stale in its past few incarnations.

One element that holds "Mortal Kombat" as a staple in the video game world is its rampant displays of blood and gore. This version of the game surely does not lack any of the original's fun and exciting methods of execution. Players have a medley of devastating options to finish opponents, from buzz-sawing their bodies into bloody chunks or upper cutting them into pools of acid and watching as the flesh liquefies off their bones, the creativity will leave players satisfied every time.

Something which might be overlooked underneath the mounds of pulped flesh is the story mode. While the fighting aspect appeals to casual gamers, the back story is for true fans. It follows a similar plotline that picks up right from the last game and then takes players down a nostalgia-ridden ride right through the original two films and the past eight games. The transitioning from combat to cut scenes is relatively seamless and really sets a new high mark for storytelling in arcade fighter games. It acts as a tapas platter, where users play as all different characters for three-to-four matches before switching to the next. It is a nice addition to get used to the 25-plus characters who appear.

A new feature is the Challenge Tower, which puts players in various obstacles that test their true might as a player. This seemingly never-ending feature adds a little extra trial for those who feel they are too good for the game's standard form. Such a feature has been available in other fighters, but it is another aspect that adds more layers to the "Mortal Kombat" fighting style.

The old, simple favorites are there too, like the ladder system in which players climb their way up the ranks to take down the almighty Shao Khan. The Krypt section is also in this game, which separates the bastion of concept art and alternate costumes across four sections of graveyard for users to dig out.

"Mortal Kombat" has been a series which has grown along with the video game industry itself. It stood out as a trailblazer for its use of violence and gore in early games and is synonymous with any discussion over the eaffects of video games on children. In recent years, the series branched out to comic books, spin-offs, and handheld platforms.

The series even took on the famed DC comic book heroes and seemed to mirror the quintessential aging rock star who that surrounds himself with young kids to try to remain cool. "Mortal Kombat" has trimmed the fat off the bloated series and returned to its core values, simple deadly combat topped with bloody dismemberment. The true test is whether the series can keep this new, clean look or if its old ways will spell fatality for the franchise.

When relationships go awry: bouncing back from breakups

By Jackie Chambers
Collegian Correspondent

We have all been there. We meet someone awesome, the connection seems remarkable and we begin to fall for them. You date for a couple months, even years. Then the relationship falls apart for any number of reasons. At the end of the night, the feeling of heartbreak sucks no matter what. While sitting in bed with a pint of Ben & Jerry's ice cream or playing an excessive amount of video games may ease the pain at the beginning, it won't be productive in any way. Here are five simple ways to get over that difficult breakup:

Keep busy

You always hear it, but it's true. If you keep yourself busy with school, extracurricular activities, or even work, your mind won't always be occupied with what your ex is doing, what you would've changed and all of that nonsense. Plus, if you work, you can gain some extra cash to go buy new clothes.

Work out

Nothing will make you feel better than getting out of bed, throwing away that empty carton of ice cream and hitting the gym. Working out releases hormones called endorphins, "the feel good" hormones that will make you naturally happy. Working out will also help clear your mind. Make a great playlist as a soundtrack for your workout. Also, exercising will mean your body will be looking fine and, of course, what a sweet revenge that will be the next time you run into that ex.

Go out

Going out and meeting new people is key. Even if you're not looking for someone, there are possibilities out there. Flirting is amazingly fun and there is nothing holding you back from getting that hot guy or girl's number. Spending a night out with friends and laughing will make you feel better.

Avoid Facebook

In today's world it's so easy to keep in contact with your ex with social networking sites like Facebook, but Facebook can also cause jealously and make you become more insecure about your breakup. Remain friends if you can handle it, but don't jump to conclusions. If it's easier, hide the person from your newsfeed. By doing so, you won't be bothered by their constant updates. And yes, they may be adding photos of going out with random girls and guys, having pictures with their arm around them, and making dumb status updates, but this could all be a part of their game to make you jealous. Just try to ignore them. Letting your ex know that the breakup didn't affect your life in such a tremendous way will eat away more at him or her than adding photos and statuses back. It's immature.

Learn from it

With every failed relationship you will find out more about yourself. Maybe your constant nagging about texting became too extreme? Learn from it. This way, when you do find that someone special, you will have the tools to maintain a successful relationship.

Breaking up is one of the hardest experiences people deal with. In time, however, everyone gets over it and moves on. We find someone new and, if we're lucky, someone much better. It will leave you wondering why you wasted all those tears over your ex.

Jackie Chambers can be reached at jechambe@student.umass.edu

Johnny Cage, one of the many familiar faces from the Mortal Kombat franchise, returns in the latest installment of the series. The game also features the addition of X-Ray attacks and a Challege Tower to hone ones' skills.

UM travels to Fenway

BEANPOT from page 8

CCSU, and I feel that he can do the same against Northeastern to get us back on track," said Stone.

The UMass bats will need to get going this Tuesday if it expects to pick up a win. Matt Gedman ended his hit-streak at 18 games against Xavier over the weekend. He is still leading the team with a .425 batting average, while Peter Copa and Rich Graef are the only other two other players batting over .300 for the Minutemen.

"Sometimes when people are hitting the ball well they get complacent, which can lead themselves into a slump, so we just need to get back on track by making solid contact and getting the hits, and hopefully get back on track against Northeastern," said Stone.

The game will be played at Fenway, home of the Boston Red Sox, at 3:30 p.m. this afternoon. UMass is 5-8 in games held at neutral ballparks this season.

"Most of these guys are real excited about getting to play at a big league ballpark, especially because the Red Sox are a big fan favorite around this area, so they are definitely looking forward to the opportunity," said Stone.

Flowers returns from injury for Richmond

JEFF BERNSTEIN/COLLEGIAN

Goalkeeper Liz Walker is the strength of the Duquesne team. Walker has a 8.60 goals allowed average and a .458 save percentage, ranking her second in the A-10 behind UMass' Katie Florence.

A-10 TOURNEY from page 8

Considering the inferiority they showed statistically, Temple's success in conference play was puzzling. Among the other seven A-10 teams, the Owls rank in the bottom half in goals, assists, groundballs and draw controls, all statistics considered essential to success in women's lacrosse.

That being said, the Owls propensity to win close games cannot be ignored. They did not win a game by more than four goals all season and three of their five conference wins were determined by just one goal.

Sophomore midfielder Charlotte Swavola, leads a modest offensive attack with 35 goals and 12 assists, while Missy Schweitzer (24 goals) and Stephany Parcell (23 goals) both produce from the midfield position.

Temple's big test will come in goal when they play offensive juggernaut Richmond. The Owls have struggled all season getting consistent play in the cage. Starting goalie Tess Bishop has just a .355 save percentage. To put that number in perspective, she's the only starting goalie in the A-10 with a save percentage below 40 percent.

Temple has perhaps the biggest advantage of any team in the tournament, as they will compete on their home turf in Philadelphia.

Duquesne (No. 4)

With the second best overall record in the A-10, Duquesne (11-6, 4-3 A-10) is poised to make an upset bid this weekend.

It's easy to look at the Dukes' pedigree and single them out as a team that could present a challenge for top-seeded Massachusetts.

First off, they enter the tournament on a hot streak after winning their last three games. In addition, the Dukes are one of the scrappiest teams in the A-10 as five of their six losses have come by four goals or less.

Like Temple, Duquesne's offense is largely contingent on generating offense individually. They rank just ahead of cellar-dweller La Salle with 45 assists on the season.

Despite a dearth of assists, the Duquesne attack is nevertheless potent. Katie Rekart ranks among the league leaders in goals (46 goals) and Meredith Dunn (49 points) and Haley Marafioti (46 points) are two of the best complimentary scorers in the conference.

A majority of Duquesne's success comes from their goalie, Liz Walker, who has played stellar all season. Her 8.60 goals allowed average and .458 save percentage rank second in the league, just behind UMass goalkeeper Katie Florence.

The one knock on the Dukes is their inability to win against the best teams in the conference. They went 0-3 against Richmond, UMass and Temple.

They will hope to break that trend on Friday when they face off against the top-seeded Minutewomen.

Minutemen compete in consolation contest

By Michael Counos
Collegian Staff

The Massachusetts baseball team gets the chance to play at Fenway Park this Tuesday as it looks to capture the consolation game against Northeastern in the Beanpot Tournament.

UMass (12-21, 5-7 Atlantic 10) is winless in its last four outings, including being swept in its last Atlantic 10 series against Xavier. The bats have gone quiet since the Minutemen had a 48-run outburst in its series against Temple. Since then, UMass is 1-5 and has scored just 20 runs in six games, including being blanked in two contests.

The Minutemen lost in the first round of the Beanpot on April 20 to Harvard, 1-0. UMass battled hard against the Crimson, especially pitcher Charlie Benson, who tossed eight innings, allowing just one run on nine hits and three walks while fanning seven. UMass did not allow a runner to reach third base until the seventh inning.

The Crimson walked off with the win in the bottom of the ninth off an RBI single up the middle by Danny Moskovits. Jack Colton drew a leadoff walk and moved over to second on a sacrifice bunt before scoring off the bat of Moskovits.

Northeastern fell to Boston College, 6-1, in the opening round of the Beanpot. The Huskies were tied with the Eagles at one apiece until things got away from them in the bottom of the fifth inning. BC tacked on five runs in the bottom of the inning, including four off of senior JT Ross. The southpaw allowed five runs on nine hits and walked one in his fourth loss of the season. The Huskies had trouble scoring when they had opportunities, stranding runners in the first three innings as well as leaving the bases loaded in the sixth inning.

UMass coach Mike Stone has chosen Ben Hart to get the start against the Huskies at Fenway. Hart is currently 1-1 with a 7.50 ERA on the season and is making just his second start this year, coming off an impressive outing against Central Connecticut last week. UMass defeated CCSU 8-3 behind Hart's eight-inning performance, allowing just four hits and striking out three.

"Hart had a great outing last time against

Atlantic 10 tourney kicks off

Top-seeded Minutewomen to face cream of conference crop

By Jackson Alexander
Collegian Staff

On Friday, the Massachusetts women's lacrosse team will enter the Atlantic 10 tournament in Philadelphia as the top seed. Despite going undefeated in conference play, there are three teams that are ready to contend with UMass for the title.

Richmond (No. 2)

Richmond enters the tournament with an unimpressive 9-8 record for a No. 2 seed. However, the Spiders overall record does not accurately reflect the talent they have. Their rather pedestrian regular season record was a result of a rigorous non-conference schedule that featured four straight top 20 ACC opponents.

Their tumultuous non-conference play began with losses to current No. 1 Maryland, No. 6 Duke, No. 4 North Carolina and No. 13 Virginia. They escaped non-conference play with a 3-7 record, with five of their seven losses coming against ranked opponents.

Early in conference play, Richmond looked poised to make a run at the No.1 seed for the upcoming A-10 tournament. But any aspirations the Spiders had were dashed when reigning A-10 Midfielder of the Year Mary Flowers went down with an injury. The junior was forced out of Richmond's battle with UMass and the Spiders subsequently lost the game and any chance at the top seed.

Flowers has since returned and should be healthy this weekend. She led the Spiders in goals (37), assists (23), draw controls (53) and groundballs (58) despite missing three conference games. Her statistical dominance extended to the rest of the conference where she lead the league in groundballs per game (4.38), points per game (4.15) and draw controls per game (4).

Richmond will take on the No. 3 seed Temple on Friday.

Temple (No. 3)

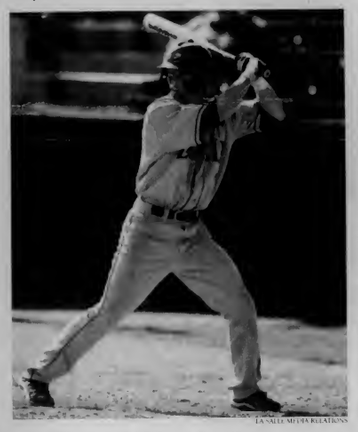
The Owls (7-9, 5-2 A-10) were another team that slumped through non-conference play only to see their fate turned when conference play began.

They collected just two wins against non-conference opponents and suffered a humbling 19-4 loss to No. 2 Florida. A long, disappointing season seemed inevitable, but they surprised many by going 5-2 against A-10 opponents and earned the No.3 seed in the tournament.

See A-10 TOURNEY on page 6

JEFF BERNSTEIN/COLLEGIAN

In the first round of the Atlantic 10 tournament, No. 4 seed Duquesne will face top-seeded Massachusetts on Friday.



LA SALLE MEDIA RELATIONS

La Salle swept George Washington in a three-game series over the weekend, including a victory on a walk-off home run by Jon Gyles.

Flyers claims series win over Saint Joe's

A-10 Baseball

By Amy Chaunt
Collegian Correspondent

Despite struggling in the series opener, the Dayton baseball team defeated Saint Joseph's in the final two contests to claim the series behind impressive starting pitching.

The Hawks (14-25, 5-10 Atlantic 10) jumped out to an early lead in the opener on Friday, breaking a scoreless tie in the bottom of the fourth to drive in five runs, resulting in an 8-4 victory.

Both teams were unable to break out at the start of the game. However, Saint Joseph's Brett Tiagwad broke the ice in the bottom of the fourth with a single to right field, followed by two Hawks hits to load the bases.

Saint Joseph's managed to score all three runners, as well as plating two more in the inning, to take a 5-0 lead. In spite of the Hawks' large lead, the Flyers (23-18, 8-4 A-10) came right back in the top of the fifth and closed most of the gap, making the score 5-4.

The comeback wasn't enough for Dayton, however, as the Hawks scored three more times, with one run coming in the sixth and two more in the eight, pushing their lead to 8-4.

Saint Joseph's confidence was boosted again early in Saturday's game, when Tiagwad scored to put the Hawks first on the board in the bottom of the third.

Dayton pulled through with the help of senior Jimmy Roesinger, tying up the score in the top of the seventh. The Flyers then added two insurance runs in the eighth, cementing their lead at 3-1.

Both teams went into the final game with one win under their belt in the series.

Dayton pitcher Mike Hauschild threw eight scoreless innings Sunday to help the Flyers to a 6-1 win.

Dayton initially held an early lead, scoring once in the second and again in the fourth inning and driving in two runs in both the sixth and the seventh. The Hawks scored once in the ninth off junior pitcher Tim Bury but couldn't overcome the deficit, as the Flyers claimed the series.

LSU pushes past GW

La Salle swept George Washington in a three-game series over the weekend, beginning Thursday afternoon with a 7-6 victory.

The lead came early when the Explorers drove in two runs in the bottom of the first and tacked on another in the second. As the game progressed, the offensive onslaught was scattered as La Salle scored one in the sixth and once in the seventh and added two more in the eighth.

GW put themselves on the board in the top of the fifth with a run and plated two more in the sixth.

La Salle held a 7-3 lead going into the ninth. The Colonials came storming back, though, tallying three runs before falling short in a 7-6 affair.

In Game 2 of the series Friday, the Explorers' Jon Gyles took home the victory with a three-run walk-off home run in the bottom of the ninth, breaking a 2-2 tie.

In the series finale on Saturday, the Colonials dropped another game to La Salle in a 9-7 loss.

For the first time all series, GW began by taking the lead early on in the top of the first, scoring two runs. Its lead was short-lived, however, as La Salle came right back, driving in three runs in the bottom of the second.

The Colonials refused to fall into a hole, scoring two more runs in the top of the third to reclaim the lead at 4-3.

GW maintained the lead at 7-5 heading into the eighth. However, La Salle rallied and drove in four runs to earn the victory and clinch the series.

Big week for the Bonnies

St. Bonaventure's Billy Urban was awarded the Atlantic 10 Conference Baseball Player of the Week, while the Bonnies' Eddie Gray was named the Pitcher of the Week. Charlotte's Tyler Barnette was named Rookie of the Week.

Urban helped lead the Bonnies to a three-game sweep this weekend over Saint Louis. He scored the game-winning run in the second game of the series in a 3-2 victory over the Billikens.

Gray, meanwhile, has pitched 56 innings with 42 strikeouts. Barnette is 5-1 on the season with a 1.37 ERA.

Amy Chaunt can be reached at achaunt@student.umass.edu.

Rain delays split doubleheader for A-10 foes

A-10 Softball

By Trevor Bray
Collegian Correspondent

The only gift April showers brought Fordham's and Dayton's softball teams was a tremendous rain delay as the two squads attempted to play a doubleheader Saturday. The teams waited for five-and-a-half hours to eventually split the pair, as the Rams took the opener 4-1 and the Flyers won later in the day, 3-1.

In Game 1, Lauren Nacke was the only Flyer to earn an RBI off of Fordham's starter Jen Mineau (15-7). Nacke homered to left field in the first to give Dayton its first and only run of the day. Nacke reached base once more in the top of the sixth after singling to right, but was unable to advance to second after her next three teammates struck out.

Fordham took the lead in the bottom of the first on Chelsea Palumbo's two-run single. Meghan Shager was the Rams' star hitter for the day, providing a go-ahead home run in the fourth and an RBI in the fifth to give Fordham a 4-1 win.

The Flyers had their revenge in Game 2, winning 3-1. Dayton took the lead when Carlyn Harlow plated Courtney Kutsulis with a single to center in the second inning. Brandy Brown hit a two-run single in the following inning, netting the Flyers a three-run lead. Fordham prevented a scoreless game in the fifth with Jamie LaBovick's single, which sent Shager home.

GW and URI split

Rhode Island had a season high and low on Friday by dropping its 41st game and winning its first Atlantic 10 contest of the year in a doubleheader against George Washington.

Game 1 proved to be a slugfest, as the two teams totaled 27 hits. In the ninth inning, George Washington's Kara Clauss hit a triple down the right field line. Thanks to a fielding error, the starting pitcher scored and propelled the Colonials to a 10-9 win. Clauss was also credited with the win by only allowing seven hits and four runs, advancing her record to 10-11.

In Game 2, Rams' pitcher Sam Bedore (3-10) controlled George Washington's offense by letting up four hits in her seven innings of work. Clauss was the only Colonials player to earn a run off of the Rhode Island freshman. Clauss reached base after a single to left field, advanced to second once Jordyn O'Donnell was walked and then was platted on Lauren Wilson's RBI single.

Nicole Massoni, the Rams' leadoff hitter, set the tone by hitting a homer in the first inning. Brittany Julich followed with a single, but advanced to second when shortstop Katie Terrazas had a throwing error. Fallon Scorpio's RBI then sent Julich home for a 2-0 lead. Rhode Island secured the 4-1 victory in the bottom of the fifth.

Rhode Island will host La Salle on Friday for an afternoon game, while George Washington faces George Mason at home on Wednesday..

Hackett pitches gem

Charlotte and St. Bonaventure split a doubleheader at McGraw-Jennings field on Friday. Charlotte's Katy Hackett threw a one-hitter, giving the 49ers a 1-0 win in Game 1, while Diana Phalon was credited for the Bonnies' 6-3 victory later in the evening.

Maureen Wells had the first and only hit for St. Bonaventure in the bottom of the second in the first game. The first baseman singled to left field, but was left there after Jessenia Andujar fouled out and Ashley Nowak struck out looking. In the sixth inning, Charlotte's Nikki Gayle scored off Kalie Lang's fly out to right field, making the score 1-0, where it would stay for the remainder of the game.

Game 2 proved to be more eventful than the pervious contest. The Bonnies tallied their mark on the scoreboard early by accumulating three runs in the first. Charlotte stayed scoreless until Tenaya Tucker's two-run hit. The senior catcher doubled down the left field line to plate Whitney Williams and Chelsea Ingersoll. St. Bonaventure added insurance in the bottom of the inning by brining in three additional runs. Ingersoll had an RBI single in the top of the sixth, but it was not enough to stop the Bonnies from taking the 6-3 win.

Trevor Bray can be reached at tbray@student.umass.edu.

'Confluence' author Tripp flows into Cape Cod Lounge

By Katie Landeck
Collegian Staff

Yesterday, Nathaniel Tripp, a member of the Connecticut River Joint Commission, gave a lecture titled, "Confluence" in the Cape Cod Lounge and spoke about the history of the Connecticut River, his adventures and his book.

Tripp, a self-defined "jack of all trades," became interested in the Connecticut River 38 years ago when he moved to his farm in Saint Johnsbury, Vt., where he raises sheep and vegetables. According to Tripp, he became interested in the river because he spent his childhood exploring the Hudson River in New York.

After years of surveying and working on the river Tripp published a book about the way the river brings people together in 2005 titled, "Confluence." He was inspired to write the story after he canoeing the river, and consistently worked on it over a two-and-a-half year period with Vermont Gov. Howard Dean.

"I was nervous at first, but we had an absolutely wonderful time," said Tripp.

A few years later, Dean appointed him to the Connecticut River Joint Commission, where he worked with people from New Hampshire as well as different interest organizations such as lumberjacks to develop a plan for the river.

"Most people were very suspicious of me," said Tripp. "I will never forget this one meeting when this one guy looked at me saying 'Who do you think you are coming here with your city ideas from St. Johnsbury?' St. Johnsbury has a population of 7,000."

According to Tripp, shortly after starting work on this project he started to work on relicensing hydroelectric dams on the river.

Over the course of his lecture, Tripp focused on the importance of encouraging children to play outside and the state of the environment.

"It is disheartening that we do not see kids playing outside anymore," said Tripp. "When I was growing up, water was the first attraction for kids, even if it was just jumping into a mud puddle."

Natural Resource Conservation major Noah Hilbert, a junior, who came to the lecture after hearing Tripp in class, agreed with Tripp's message.

"I really liked his message about getting more kids outside," said Hilbert. "We should be playing less video games. I should be playing less video games."

He also touched on the effects that global warming is having on the river basin and the effect he believes it is having on the fisheries.

"Every year we are just crossing our fingers and praying," said Tripp. "It is tragic what is happening to the fisheries and in the ocean."

"We are looking at the possibility of several systems crashing," he added.

Tripp was invited to speak by Eve Vogel, an assistant professor in the Geology Department, who also became interested in the Connecticut River after moving to the region. However, she struggled to find comprehensive information and the history of the Connecticut River until she found Tripp's book.

"He was invited here today here today really because his book is such s special find," said Vogel.

Tripp is currently working on another book about his experiences on the river. However, he is still "feeling his way into it" and has no title or publisher at this time.

The lecture was the last in both the Five College Sustainability Series and the Environmental Institute lecture series.

Katie Landeck can be reached at klandeck@student.umass.edu

Nathaniel Tripp, author of the book "Confluence," talked about his inspiration through his work on the Connecticut River at a lecture yesterday.

Ben Stein to speak at UM event today

Ben Stein – a noted author, actor and economist – is scheduled to speak tonight at an event organized by the UMass Republican Club.

By Andrew Sheridan
Collegian Staff

Author, actor and political commentator Ben Stein will be coming to the University of Massachusetts to deliver a lecture Wednesday.

Stein is perhaps best known for his career in film and television. He broke into the world of entertainment with his iconic role as the attendance-reading economics professor in "Ferris Buehler's Day Off," and has had a presence in Hollywood ever since.

Stein starred as himself in a Comedy Central game show "Win Ben Stein's Money," which ran for five years and won seven Emmy Awards. He has appeared in dozens of other programs, both in person and as a voice actor. The actor has lent his famously monotonous tones to such cartoon programs as "Rugrats," "The Fairly Oddparents" and "Pinky & The Brain."

Less well-known among the general populace is Stein's long history as an academic. Labeled a modern Renaissance man by some, Stein has been active in the fields of politics, law, economics and social activism.

After graduating as valedictorian of Yale Law School in 1970, Stein soon entered into the field of politics. By 1973 he was working directly for the president of the United States, writing speeches for Richard Nixon and

UMass ranked among top green schools in U.S., Canada

The University of Massachusetts has been named one of the most successful schools in the country and Canada to "go green," according to a new guide released by the Princeton Review.

According to a release by the UMass News Office, "The Princeton Review's Guide to 311 Green Colleges" praised UMass for its water and energy conservation techniques of the Central Heating Plant. The guide also explains how new buildings on campus were constructed using sustainable designs.

Other campus organizations mentioned in the guide include the College of Natural Sciences, the Office of Waste Management, UMass Dining Services and UMass Fleet Services.

Five College schools Smith College and Hampshire College also were included in the list of 311.

As a whole, schools in Massachusetts fared well in the ranking, with 22 colleges from the state landing somewhere on the list – making the Commonwealth the third highest ranking state in the country on the list. Boston schools, including UMass Boston, were also well represented.

However, New York has the highest number of green schools on the list, totaling 38. California came in second in the ranking of total schools, with 29, while Pennsylvania ranks fourth, with 20 schools. Three states – Illinois, North Carolina and Virginia – each have 10 representatives.

The list also includes four schools from Washington, D.C. and three schools from Canada. Forty-eight states have some representation, with Nebraska and Nevada being the only exceptions.

According to the UMass press release, the guide "is the only free, comprehensive guidebook profiling institutions of higher education that demonstrate a notable commitment to sustainability in their academic offerings, campus infrastructure, activities and career preparation."

Schools were chosen based on the results of a survey issued to college administrators last year, the UMass press release noted. Administrators were instructed to answer questions about their school's sustainability practices. "Green ratings" were then scored and scaled from 60 to 99, and the guide includes all schools that scored above 80, the release states.

Accomplice arrested in Mon. bank robbery

JEFF SMITH/KYLE BRADLEY HENNESSY/COLLEGIAN

Shayna J. Henckel-Miller, a 19-year-old UMass student, was arrested Tuesday and charged with unarmed robbery in connection to a reported robbery that took place at the Bank of America on South Pleasant Street Monday.

University of Massachusetts student Shayna J. Henckel-Miller – a 19-year-old who lives at 36 Hedgerow Lane, Amherst – was arrested yesterday and charged with unarmed robbery stemming from a reported robbery that occurred at the Bank of America on South Pleasant Street late Monday morning, according to a press release issued yesterday by Amherst Police Lt. Ronald Young.

Henckel-Miller, who is currently enrolled as an undeclared continuing education student, was also identified as an accomplice to Monday's robbery.

Police originally arrested William Oldershaw in connection to an alleged unarmed robbery at the downtown Bank of America branch. According to the release, Henckel-Miller allegedly accompanied Oldershaw to the bank during the robbery, took part in the preparation of the demand letter used and then flew the scene with him.

Oldershaw, who was charged with the same crime, is being held at the Hampshire Country House of Correction rather than meeting the $2,500 bail. Henckel-Miller's charges, like with Oldershaw, carry a sentence of 12-to-36 months, according to Massachusetts criminal sentencing guidelines.

According to the release, Henckel-Miller is being held at the Eastern Hampshire District Court and had her arraignment scheduled for Tuesday afternoon.

******IMPORTANT ANNOUNCEMENT******
REGISTRATION FOR SPRING 2011

The Writing Program Placement Test
will be offered on:

Thursday, April 28, @ 6:00 pm in Bartlett 310

You must take this exam to qualify for enrollment in EnglWrit 112 (College Writing).

This test may be taken only once.

Students do not need to register for the test.

Kinesiology students to study sitting habits; Type 2 diabetes

Is there such a thing as too much sitting?

Kinesiology doctoral student Kate Lyden will attempt to answer that question in a research project titled, "Metabolic response to increased sedentary behavioral dose." Lyden is one of two University of Massachusetts kinesiology students receiving a research grant from the American College of Sports Medicine (ACSM) foundation, according to a press release issued by the UMass news office.

"This project will evaluate how sitting time and how we accumulate sitting time (e.g. prolonged unbroken periods of sitting vs. breaking-up sitting time) affects metabolic and cardiovascular risk factors," Lyden explained in the press release. "Outcomes from this study will begin to shed light into specific ways to change behavior to improve health and may inform future public health recommendations on sedentary behavior."

Lyden said that human lifestyle has changed in recent years and has decreased in activity. She said that researchers have said that too much sitting is bad for one's health and have offered suggestions, such as standing to answer the phone. However, she noted that these studies have yet to fully explain how sitting negatively affects health and to what to degree.

Lyden plans to do her research in subjects' natural environment as a way to gauge the effects sitting has on a typical lifestyle.

The ACSM Paffenbarger-Blair Fund for Epidemiologic Research on Physical Activity Initiative is funding Lyden's research.

Also receiving a research grant is Rich Viskochil, who will study how exercise can help prevent the development of Type 2 diabetes.

According to the release, Viskochil said that research has proven a connection but hasn't examined how it causes more secretion of insulin from the pancreas.

"There has been much less focus on how exercise may work to increase the amount of insulin being secreted from the pancreas," he said. "In order to properly measure changes in insulin secretion independently of improvements in insulin sensitivity, testing must be done in cell culture without the presence of muscle."

Viskochil added that no such testing method exists, but once he is able to develop a proper measuring technique, he will conduct testing by taking cells from those who exercise in a serum.

"This serum may dictate how the islets [cells] respond to sugar by secreting insulin, which can then be measured," he said. "Measuring the effects of insulin secretion in a cell culture may be able to determine whether or not exercise has a direct effect on insulin secretion and identify a new mechanism by which exercise works to prevent diabetes."

The ACSM's Foundation Doctoral Student Research Grant Initiative is funding Viskochil's grant.

WEDNESDAY, APRIL 27, 2011

"If we don't believe in free expression for people we despise, we don't believe in it at all." - Noam Chomsky

EDITORIAL@DAILYCOLLEGIAN.COM

Why we need condoms in porn

Victoria Knobloch

Last October, a porn actor tested positive for HIV and the whole industry shut down for days, according to Fox News. This is not the first time an erotic actor has tested positive and caused a halt in the industry and it probably won't be the last.

Despite fairly strict regulation around regular testing, disease slips through the cracks. In a business where one person can have many partners in one photo shoot and have many shoots in a month, even getting tested every two weeks doesn't create a safe environment. In response to this latest breakout, the California Occupational Safety and Health Standards Board (Cal/OSHA) has begun to discuss a proposal making condom use mandatory in all photo or video based pornography, according to aidshealth.org.

This is not a new idea, but the most recent outbreak seems to be a catalyst for change. There is some resistance from industry heads, citing loss of profits and difficulty with enforcement, but I suspect despite their groaning, this may be the moment in time when condom regulation comes into reality.

If condoms were present in every porn film we might see a change in attitude about them in the general public.

While the health and safety of sex workers is critical, it is not the only benefit to mandating condom use in pornography. In a world with abstinence education and wide internet access, young children are learning the facts of life from alternative sources. A 2002 Kaiser Foundation study found that 34 percent of public secondary schools taught abstinence-only sex education programs and that 58 percent used "abstinence-plus," advocating abstinence first with supplementary teaching on how to use birth control. I'm not sure exactly what the "plus" is or how effective it might be, but the teen pregnancy rate in the United States rose three percent between 2005 and 2006, according to The Washington Post.

While a good chunk of the information about sex teenagers receive comes from their friends, I imagine a lot comes from internet pornography. I'll admit there aren't many statistics to back me up on this claim (and my Google search for "How many teenagers look at porn" didn't turn up much), but with the way the news media goes on about underage "sexting," I can assume teens are getting information about sex from somewhere.

I got the internet in my house around age 10, and I had seen pretty much everything there was to see by the time I entered middle school. There is lots of debate to be had about depictions of women, violence, degradation and false presentation of sex, and my early exposure to all sort of pornographic material certainly shaped some of my ideas about sex. But you can't deny that I'm not the only person our age that had this experience. There's a reason guys have a preconceived notion of what a naked woman should look like, and it's porn.

But the debates about pornography could fill a book. My point is about condoms.

There seems to be a pervasive belief among people our age that condoms are just not as sexy as 'going bareback.' The "lessens the sensation" excuse has seemingly become a legitimate reason to not wear them. If condoms were present in every porn film, we might see a change in attitude about condoms in the general public. This could include shots of the condom being applied or talked about in a positive light.

Conservative and anti-porn groups can talk about shutting the whole system down, but if there is one lesson history has taught us about sex work, it's that it will just go underground. Like many controversial and illegal things in this country, legalization and regulation is far more helpful than a complete ban.

It's true that these issues cause us to talk about pornography on the evening news and begin to discuss just how many Americans indulge in pornographic material.

But at some point America is going to have to drop the prude act and accept these elements in our society so that we can fully dissect how they effect our every day lives.

We can't ignore the influence that pornography has on our culture. As it becomes increasingly available for free online, tech savvy teenagers will jump their parental controls and see whatever they like online, long before they ever have a real life sexual encounter. If I was the president of all the porn in the world there are a lot of changes I would make to the content and attitude of pornography, but I'm not in that position. Condom use protects actors (and the population they may be sexually active with) from disease, but it also sets a precedent that condoms are sexy and necessary for many different sexual acts. Until comprehensive sex education is mandatory and funded in every school in this country, kids will always take their curiosity elsewhere. We can't change sex education overnight, but we can change what the porn industry teaches our teens.

Victoria Knobloch is a Collegian columnist. She can be reached at vknobloc@student.umass.edu.

Straight until proven gay

Steven Jango-Cohen

One Saturday night this past winter, I was riding the bus downtown in my standard outfit – fluffy woolen mittens, a black coat and a Sherpa hat straddled by dangling braids. I sipped from my Sprite bottle filled with a very un-Sprite-like orange liquid as two 'bro's' waited next to me. We hit it off right away and discussed everything from baseball to potential parties that evening.

Inevitably, however, due to the fact that at no point in the conversation did I start physically grinding one of them or lip-syncing to Lady Gaga, they assumed that I was straight.

Here's where things get difficult. I'm not straight, so how do I handle this situation? I ask the question because this event tends to echo and rematerialize in various incarnations in my daily life. My dentist, for example, enjoys taking advantage of the fact that his patients can't respond while he's lodging metal appliances up their mouths, and thus tinkers with what I like to imagine is his aspiring stand-up comedy routine. I waited for the ending of one story, mouth agape by necessity, as he explained with expert punch-line prosody why his son and friends didn't want to go to a musical with him. "Because Dad," he concluded. "We're not gay." I could almost hear the laugh track cut in while he subconsciously manipulated my mouth into an appropriate laughing formation.

So what to do in these situations? I could go back to being 17-years-old and smile and laugh, perhaps slipping in a slightly defiant comment such as, "Yeah, well nothing wrong with that ha, ha" – all the while allowing him to believe that I was straight in order to keep the conversation and laughter flowing smoothly and easily. Another option could be making some joke along the lines of "well, if I was your son I would go to the musical with you, because I'm gay," and then hope that the conversation somehow continues without any additional awkwardness.

The problem with a less cartoonish version of the second, more aggressive option is that a felicitous conclusion doesn't normally happen. People are so accustomed to gay meaning the "gay stereotype," that when someone doesn't think that you're gay and you casually tell them that you are, normally a moment results where you're being spoken to in a tone as if you had just revealed some painful, personal tragedy. "Oh I'm sorry I didn't know … We're totally cool with that man, it's completely fine if you're gay" is the common reply, usually accompanied by a hand on the shoulder to signify solidarity – and that even though you're gay, they're still willing to make physical contact with you. It's great that we're at that point where people don't want you to feel bad about being gay and want to make it clear that it doesn't bother them. But just imagine that same conversation if you replaced "gay" with "out-of-state student."

It would seem completely absurd – why would a student feel embarrassed about being an out-of-state student and why would the other student accept his embarrassment as natural, and then feel the need to reassure him that there's no problem with him not being from Massachusetts? Whenever you're not sure if a comment is homophobic, misogynist or indicative of any other "-ism," make a hypothetical comparison akin to the above, or make the comment racial instead, and see if you'd still feel comfortable saying it.

But just imagine that same conversation if you replaced "gay" with "out-of-state student."

Clearly, in terms of accepted societal norms, being gay is negative, while being an out-of-state student or a non-white student is supposed to be neutral. Even the most progressive and open-minded student will generally take offense if you ask if he's gay, because he'll assume that he's "acting gay" in some way. This is a reflection of the prominent popular belief in "gaydar." If someone passes the "gaydar" test (meaning they appear straight), but turn out to be gay, it is assumed to be a rare phenomenon – and that they were fiendishly clever enough to fool you. I used to believe in this as well, but then I discovered that it's actually not a rare phenomenon at all. Just look at the Craigslist personals and we find the huge paradox of gay life.

Or if online sex solicitations make you squeamish, just walk around the Recreation Center or Berkshire Dining Commons with my friend Tom, and let him point out the throngs of bisexual and bi-curious guys rumbling past that he'd met through these sites. And let me stress, there are a lot of these guys.

The Craigslist gay personals do not reflect what people see and know as "gay" at the University of Massachusetts by any means. The openly gay community at UMass is made up of a small number of kids who understand that sexuality is awesome and irrelevant and that you can love whomever you'd like to. They walk around campus holding hands and being couples – and dealing with the daily weirdness of living as a political statement and/or campus oddity. Being an oddity can suck. After Extravaganja, as part of a mass pilgrimage to Antonio's, my boyfriend and I stopped (while holding hands) to pet a puppy and remark on how cute it was. I almost fled back to the festival due to how painfully stereotypical we seemed.

The much larger, true gay community of UMass is what you find on Craigslist. This is where the straight-acting, "tough," "masculine," and terrified gay and bisexual guys of UMass are hidden. These guys are "str8-acting," discreet, and "looking to keep it that way" as one particularly aggressive faceless torso informed his fellow Craigslist dwellers. They don't want to be labeled as a gay person and grouped in with "the flamers." They're looking for sex, not for an identity. These guys make posts commenting on how hard it is to find "normal" gay guys who like sports and other "normal" activities. They make proud comments about not identifying with the gay community, as well as memorable invectives directed toward the stereotype-reinforcing gays such as, and I quote from a formerly open, now closeted Southwest bro, "Ugh, I hate those."

To this unseen population: The reason why is it so hard to find gay and bisexual guys like yourselves walking around campus is because you all hide out on Craigslist, and only tell a handful of friends (or no one at all) that you like guys. There's nothing wrong if you like online hook-ups, but when you do it and pretend like it never happened, that's when people start looking at homosexuality as creepy or clandestine. This is part of where the gay stereotype comes from, and it's not until these guys start living confidently and openly that their sexuality will stop being a burden.

Five Reasons Why...

The weather has started being nice:

1) Holub really is that powerful.

2) Mass hallucination – it was actually below zero outside.

3) It's saving all the bad weather for Commencement.

4) Ben Stein paid for it.

5) It's just biding its time, being patient and awaiting the opportune time to – Look out! There it is, behind you!

Ed/Op

Save 'Maria Talks'

Billy Rainsford

Budgets and spending seem to be on everyone's minds these days, both on a national level and closer to home. On the chopping block of the Massachusetts state budget, however, is more than just our school's funding.

As reported by The Quincy Patriot-Ledger, Rep. Marc Lombardo (R-Billerica) held a press conference Tuesday calling on Governor Deval Patrick and requesting the state shut down a sex education website called MariaTalks.com. The website, maintained by the AIDS Action Committee, receives part of its funding through state grants.

Lombardo's main issue with the website stems from the section on abortion. The site goes into detail about abortion laws and procedures in Massachusetts, and Lombardo faults it for informing underage girls how to get an abortion without first informing their parents. In Massachusetts, a girl under 18 can only get an abortion with either parental consent or authorization from a judge.

MariaTalks has a lot of information on sex, birth control, emergency contraception, STDS, and sexual violence.

The abortion section on MariaTalks.com is just one page on a very well-rounded and in-depth sex education website. MariaTalks relates information from the point-of-view of a fictional 18-year-old girl named Maria, who speaks in an informal and accessible way to educate young readers.

MariaTalks has a lot of information on sex, birth control, emergency contraception, sexually transmitted diseases and sexual violence. This information can often be difficult to get for teenagers, who may end up resorting to confusing or unreliable sources. MariaTalks instead educates these kids with the stated goal of "helping young people make healthy, informed decisions about sex," according to AIDS Action Committee's website.

Most sections on the site actually encourage teenagers to consult with their parents on the decisions they are making. Importantly, abortion is also the last option presented to pregnant teens, after pages on birth control, contraceptives and adoption. The site simply acknowledges the reality that some girls do not or cannot involve their parents in the process, and gives them the information they deserve to know.

Despite Rep. Lombardo's objections, the site does a great service to the commonwealth of Massachusetts, and it is in the state's best interest to keep it running. The increased education on sexual health helps teenagers avoid sexually transmitted diseases and unwanted pregnancies. By giving teens the information they need to avoid a pregnancy, the site will actually help cut back on the abortions Lombardo is crusading against in the first place.

After all, not every teen's parents are keen to have the birds and bees talk, and even then, Mom and Dad are not necessarily experts on the subject. Sex education in schools is often limited, and teenagers may be less willing to ask questions about sexual health in front of their peers. The ability to consult a reliable, accessible website from the comfort of one's own home is greatly beneficial to a teenager, who can then get the information he or she wants.

Lombardo's letter also has the backing of Representatives Colleen Garry (D-Dracut) and Stephen DiNatale (D-Fitchburg). While Lombardo is at least keeping with the party line with his stance, Garry and DiNatale are Democrats who are crossing ideological lines to oppose the site.

This attack on sex education is especially troubling in light of recent budget cuts recommended by the Massachusetts House of Representatives for the next fiscal year, according to the AIDS Action Committee. The cuts include some $2 million to programs that serve people with HIV and AIDS, as well as helping combat the disease. These cuts combined with the demand to remove MariaTalks run the risk of increasing the rates of HIV and AIDS in Massachusetts, including among young adults.

MariaTalks has several long sections confronting HIV and AIDS issues, including information on how to protect oneself, how to get tested and what to do if you or a friend tests positive. The site also has a long section supporting LGBTQIA visitors to the site, who are even less likely to find reliable information about sexual health. Even if Massachusetts decides to cut funding towards combating HIV and AIDS, it is at least in the interest of the state to support a website that will help combat it instead.

It is important that Governor Patrick rejects the representatives' letter and continues the state's financial support of MariaTalks. Massachusetts has relatively low teen pregnancy and birth rates compared to the rest of the country, and MariaTalks is going to help keep it that way.

Is going organic worth the money?

By Kate Evans
Collegian Staff

Buying organic food may cost a little more money, but the nutritional and healthful benefits can outweigh their cost, especially when one considers the sheer amount of pesticides and artificial fertilizers used in traditional farming.

Going organic is said to be both commendable and healthy. But is spending an additional $20 at Big Y worth it? Possibly, but it is important to know the difference between organic and conventional food preparation prior to making a decision.

According to MayoClinic.com, the style of organic farming refers to the lack of unnatural additives involved in the growing process.

"Organic farming practices are designed to encourage soil and water conservation and reduce pollution," said the site of its benefits.

The trend seems to be sweeping the nation, one grocery store or restaurant at a time.

Amy Spindler of CookingLight.com shared in her article, "Organic vs. conventional: What do experts say?" that "the organic market is growing at a steady pace of nearly 20 percent annually, and that translates into organic alternatives in nearly every grocery aisle – from snack foods to frozen meals to baked goods," According to Spindler.

Aside from the organic market expanding in grocery stores, it is also ambushing local restaurants. Various eateries in the Amherst area pride themselves on buying only locally grown foods.

The Black Sheep, in Amherst, offers handmade breads, desserts, pastries, locally- bought milk and organic fair-trade coffee. Tabellas Restaurant in Amherst is advertised as "farm to table dining." According to the eatery, 80 percent of their selections are locally and organically grown.

A common misconception is that all foods served organically are mainly vegetarian or vegan. This is certainly not the case, as Local Burger in Northampton proves.

This self-proclaimed "good fast food" joint offers "fresh, delicious, and well-priced food, while supporting the community through the use of local produce, products and services," according to their website. The burger shop serves veggie, turkey and portabella burgers in addition to the classic red meat option, all organic.

But what will this do for prices? From Local Burger, the Grass Fed burger is $6.59, whereas a smaller burger from McDonald's fits on the Dollar Menu. Local Burger's menu lists that their seven-dollar burger is from Chicoine Farm in Easthampton. McDonald's offers no place of origin, leaving customers to guess.

It's not just restaurant prices that are escalated from the organic boom. Supermarkets also feel the wrath, according to the Chicago Tribune.

In the article titled "Organic vs. Non-Organic," the Tribune explains that "higher prices are due to more expensive farming practices, tighter government regulations and lower crop yields." Apparently the organic sticker isn't just slapped on any food item. As the Tribune continued, "Organic farmers use methods to control weeds and pests that are labor intensive an d more expensive than herbicides or pesticides, and that can drive up cost."

As for the health differences between going organic and consuming conventional methods, MayoClinic.com sums it up. Conventional farmers use chemical fertilizers to increase plant growth to its full potential, while organic farmers stick with manure or compost to help flourish vegetation. In conventional farming, insecticides and pesticides are sprayed on crops to keep disease at bay.

Organic farmers "use beneficial insects and birds, mating disruption or traps to reduce pests and disease," said the site. Conventional farmers also use herbicides to kill weeds, while organic farmers practice crop rotation or manual weed removal.

MayoClinic.com also notes one of the scarier aspects of conventional farming; animals are fed growth hormones and other medications to increase food production and ward off diseases. Organic farmers simply give animals organic feed and let them roam outside, meanwhile carefully cleaning equipment and surroundings to fight disease.

The choice seems simple: Support factory farming while ingesting potentially harmful chemicals for lower prices, or go organic and support local farmers who avoid dangerous additives for a bit more money. Going green may take a bit extra green out of your wallet, but it could lead to a healthier lifestyle.

Wheatberry a choice spot for healthy eats and treats

By Nick Bush
Collegian Staff

Give someone a loaf of whole grain bread and they will eat for a morning; teach someone how to mill and bake his or her own bread, and they will be eating healthy for a lifetime.

This principal fits well with the attitude of Ben and Adrie Lester, whom as the proprietors of Wheatberry Cafe (321 Main St., Amherst) for nearly four years have been putting a new "twist"on the community's connection to its grain: Having customers mill it themselves.

In the years after World War II the business of grain production shifted from local farmers and millers toward centering almost exclusively in the American "breadbasket"of the Midwest, leading most individuals to be further and further disconnected from their breads ever since. When they opened Wheatberry Cafe into a modern world full of tasteless McDonald's buns in 2008, the Lesters were actively seeking to reconnect people with wonderful bread rather than Wonder Bread.

Beyond offering Amherst residents a handpicked selection of foods equal parts healthy and delicious, the Lesters also aim for the betterment of the Pioneer Valley community by developing local organic farming networks and offering a number of ways for customers to interact with their own meals.

"We started this because we love good food," said Adrie Lester. "From the start we've always grown food. Getting food straight from the farm can be tricky, but we've come a long way in organizing since we began. Most of our vegetables and grains come from our own farm in Shutesbury, [Mass.]"

Beyond the grain produced at their own Wheatberry Farm, the Lesters use locally-grown grains from Lazy Acres Farm in Hadley, Mass. and Uppingill Farm in Gill, Mass. Unlike most organic local bakeries, Wheatberry Cafe does its own grain milling on location, and over the past few years the Lesters have worked hard to create an atmosphere that encourages community members to bring in their own whole grains to mill in the cafe's kitchen.

The couple has been integral in the creation and success of the Pioneer Valley Heritage Grain Community Supported Agriculture (PVHG-CSA) program, which offers the community a rare chance to get in touch with its own grain. For $350 a seasonal share, participants receive eight distinct varieties of locally grown heritage grains, including Zorro (a hard, white wheat perfect for breads), Richland (a hard red winter wheat), buckwheat, oats, rye and Mandan Bride (a flint corn hailing from the native American tribes of Minnesota and North Dakota).

Members pick up their shares from the farmers themselves, and also have the opportunity to make use of Wheatberry's own mill whenever it is convenient.

"We believe that when food is organic and grown nearby, it tastes better," said Lester. "The process of growing food and taste of the food go hand in hand."

Even if you don't have time to mill your own, individuals who are looking for locally-grown grains freshly baked into savory breads will be satisfied by a stop into Wheatberry. On any given morning you can drop in for breakfast and find the Lesters baking and milling in the shop's kitchen, with their small children playing around their ankles and the smell of hearty bread rising through the room.

The menu at Wheatberry Cafe is limited, with only a handful of options scrawled on the shop's chalkboard, but each item exudes a handcrafted feel. Choices include the 'Cackleberry,' which features two scrambled eggs (from Mapleline Farm in Hadley, Mass.) and a vibrantly flavorful breakfast sausage (from Chestnut Farm in Hardwick, Mass.) over their own hearty whole wheat toast, and the 'Locavore,' which includes cheese from Chase Hill Farm in Warwick, Mass. on top of two scrambled eggs and served over one of the bakery's delicious and unique handmade flax seed bagels.

"More than 90 percent of our vegetables are certified organic, and 100 percent of our meats and cheeses are organic as well," said Lester. "That's an amazing thing to offer, and not just because it tastes great. We've been able to convert some vegetarians just by being able to show them how our thoughtfully our local meats are produced, which is really encouraging."

Another option for individuals seeking out a local taste is Wheatberry's 'Sprout,' which features fresh sprouts, frost-sweetened carrots, olives and homemade cream cheese on one of their bagels. Wheatberry also features many offerings for those with sweet tooths, including delectable carrot cupcakes topped with cream cheese frosting, and each morning a new batch of whole wheat cherry scones and raspberry croissants - all of which are baked with their own grains.

"Our most popular item is our whole wheat cherry scones," said Lester. "People are addicted to them."

Normally people associate highly-processed fast foods with being addictive and habit-forming, but with offerings that are healthy, delicious and socially-conscious, it's easy to see how one could get hooked on Wheatberry Cafe.

Drinking on a diet can be difficult. Light beer has the least number of calories, but unfortunately that usually also means drinking more for the buzz you are looking for.

A college student's guide to drinking on a tight diet

By Jennie Cullinane
Collegian Correspondent

My roommate and I are currently attempting to drastically overhaul our eating habits. Subbing tortilla chips for baby carrots and bulking up our egg-white omelets with raw vegetables and fat-free cheese, together we are making very direct efforts to clean up our diets and eat healthier. So far, we have been very successful. Done with midnight calzones and Sunday-morning chocolate chip muffins, we've been eating right and losing weight.

But there is one unhealthy component of our diets that we just can't seem to shake: alcohol. Talking the other night, we both agreed that we would be much healthier if only we could eliminate booze from our diets. Full of empty calories and high in sugar, alcohol is not only fattening in itself but also leads to fattening decisions. After a night of party-hopping and six mixed drinks, a plate of nachos or three slices of pizza just sounds incredible. And because alcohol just makes it so hard to say "no," you usually wind up making some diet decisions that you will regret in the morning.

When dieting, it is obviously best to just abstain from alcohol all together. But if you lead a lifestyle that makes such a transition pretty impossible, then you need to learn the ways to booze right.

Beers

Light beer is an obvious choice for dieters when deciding how best to drink alcohol. Low in calories and contained in pre-portioned bottles, a light beer is a viable option for people attempting to cut calories without sacrificing the indulgence of a cold glass of beer. However, be aware that light beers contain less alcohol per volume than heavier beers, which means that you will drink more of them before feeling a buzz. Drinking five or six light beers in a night quickly adds up to six-hundred calories, so for some drinkers ordering two non-light beers with higher alcohol content may be a more attractive option.

Light Beers: By the Numbers

Bud Select 55: 55 calories, 1.9 carbs
Beck's Light: 64 calories, 3.9 carbs
Amstel Light: 95 calories, 5 grams of carbs
Miller Light: 96 calories, 3.2 carbs
Budweiser Select: 99 calories, 3.1 carbs
Coors Light: 102 calories, 5 g carbs

Wine

Wine has a distinguished reputation among alcohols. With only 100 calories per glass, it is nutritionally reasonable and can also help lower the risk of heart disease, certain cancers, and strokes when consumed in moderation. But be aware: one glass does not mean you can fill the glass to the brim. One glass of wine equals 5 ounces, about one third of your typical wine glass. Portion control is key when drinking wine. Both red and white wines pack about twenty calories per ounce, but red wines are more effective at lowering cholesterol and hypertension.

Hard Alcohol

Many people will opt for hard alcohol when dieting. Unlike wine and beer, hard alcohol does not contain fat or sugar and, at about 100 calories per shot, appears to be an attractive option for dieters. However, unless taken as shots, hard alcohol is often mixed with high-calorie, sugary beverages that will pack on the pounds. When drinking hard alcohol, choose low-calorie mixers like diet sodas or sugar free juices to avoid these unnecessary calories. Another trick to avoid the calories of a mixer: load your drink with ice. Ice can work as a zero-calorie bulk to your drink and the added water can cut back on tomorrow's hangover.

When selecting a hard alcohol, try to avoid the flavored varieties. As delicious as a shot of Smirnoff Raspberry can be, it is loaded with sugar and has nearly double the calorie count of unflavored vodka. To further turn you off from flavored alcohol, remember that they have a lower alcohol content than unflavored varieties. It will take more of these higher calorie and sugar-packed types of alcohol to get your buzz on, and by the end of the night you might end up having consumed twice the number of calories than if you had just stuck with the unflavored.

Hard Alcohol: By the Numbers

Vodka: 70 calories per shot
Spiced Rum (i.e. Captain Morgan's): 90 calories per shot
Clear Rum (i.e. Bacardi): 105 calories per shot
Gin: 116 calories per shot
Tequila: 120 calories per shot

In the end, just remember to drink smart. Everything is okay in moderation – even on a diet. So don't binge on that bottle of wine or handle of Rubinoff! Not only will you wake up with a nasty hangover and hazy memories of some poor life decisions, but you'll ruin your diet. And who wants that?

Jennifer Cullinane can be reached at jcullina@student.umass.edu

Offense main difference for softball in 2011

By Steven Levine
Collegian Staff

Although the Massachusetts softball team has a conference-leading 10-3 record and is supporting its preseason pick to win the Atlantic 10, there's reason to believe the trophy won't come nearly as easily this year.

That reason?

The Minutewomen's lethargic offense. Last year, when UMass compiled a 17-0-1 conference record on its way to claiming the conference title, the team batted a conference-leading .292 average. That average was helped by then-seniors Carly Normandin and Sarah Reeves, who hit .400 and .340, respectively. Katie Bettencourt, a sophomore last year, contributed with a .333 average. However, Bettencourt, arguably the Minutewomen's most productive hitter, has missed the last 20 games due to an injury suffered in a game against St. John's on March 13.

Without those four players, UMass has relied on freshman Lindsey Webster and junior Kyllie Magill to provide the majority of offense. Webster has been invaluable despite missing eight games, batting a team-leading .312 to go along with 19 runs scored, four home runs and 15 RBIs. Magill, who hit .303 last year, is batting .298, good for second on the team. She also leads the Minutewomen with 19 RBIs and 20 runs scored out of the leadoff spot.

Senior Meghan Carta, who hit .308 last season and led the team in home runs (13) and RBIs (43), is mired in a season-long slump. With a .226 average, two home runs and 18 RBIs, Carta is far off pace from replicating last season's performance which earned her selections to the NFCA All-Northeast Region First Team and the A-10 All-Conference First Team. With Normandin and Reeves gone, and Bettencourt indefinitely sidelined, Carta was expected to help lead UMass coach Elaine Sortino's youthful roster.

It certainly hasn't been as easy as last year when the Minutewomen were second in the A-10 with 266 runs scored, outscoring their opponents by 149. Although UMass hasn't played as many games as some of its A-10 foes, its 140 runs scored are still a major cause for concern as its places them at eighth in the conference in that statistic.

Sortino has repeatedly said that her team simply needed time to polish its approach at the plate. While there have been improvements from the beginning of the season, the Minutewomen could afford to provide insurance runs for their ace, Sara Plourde.

Plourde is following up last year's campaign in which she went 40-8 with a 1.30 ERA and a national-leading 556 strikeouts. With a 1.21 ERA and strong pitching ability this year, she has kept the Minutewomen among the A-10 elite. As the season progresses, Plourdes effectiveness could have an effect on how the Maroon and White fare against other A-10 leaders in Temple and Fordham come playoff time.

The Rams (31-17, 12-4 A-10), who were picked to finish second in the conference (and who currently sit in second) boasts a confident offense and an ace comparable to Plourde in junior Jen Mineau. The Rams have four players with at least a .300 average that support Mineau, who is 16-7 with a 1.61 ERA to go along with 203 strikeouts in 148 innings.

Minutemen slay Huskies at Fenway

By Eric Mansfield
Collegian Staff

UMass	4
Northeastern	2

With the opportunity to play in the illustrious Fenway Park, the Massachusetts baseball team elevated its game to finish off Northeastern in the heart of Boston Tuesday, as the Minutemen (13-21, 5-7 A-10) defeated Northeastern (12-25) 4-2 in the Beanpot consolation game.

UMass coach Mike Stone said after that game that while playing at Fenway "is a treat" for everyone involved, it's even more of a treat if the team plays well and gets victories.

UMass did just that, getting on the board early by plating Anthony Serino after Peter Copa reached base on a throwing error by the shortstop. The Minutemen further capitalized on the Terrier miscue with a two-out triple to right field by Kyle Multner. The triple plated Copa and Tom Conley, who reached on a single.

The Minutemen tacked on another run in the third with consecutive base hits by Matt Gedman and Copa.

UMass held the 4-0 lead for the next two innings until the Huskies bats woke up in the sixth. Jon Leroux got things started with a double to right field and John Puttress followed with a single to right. Leroux reached the plate after Oliver Hart hit a single to center field, with Aaron Barbosa then plating Puttress with a double down the right-field line.

After those two runs, UMass starting pitcher Ben Hart was replaced by Joe Popielarczyk, who retired the first batter he faced to end the inning.

UMass failed to answer in the next two innings, as the Huskies' Kevin Ferguson retired the next six batters he faced, including the Minutemen's three, four and five hitters.

It was the same story for NU, though, as Popielarczyk and Leif Sorensen combined to shut down the Huskies for the remainder of the game.

The loss gives NU its fifth in its last six contest.

Hart earned the win for the Minutemen as he went 5.2 innings, allowingtwo runs on six hits while striking out six and walking five, while Sorenson earned his fifth save of the season.

Stone explained after the game that Hart pitched well but was not as sharp as he was in his last start against Central Connecticut. He also admired the work of the closer Sorenson, who has been a reliable arm out of the bullpen all season long.

Taking the loss for NU was JT Ross, going 5.2 innings allowing four runs, one of which was earned while striking out three and walking one.

The Beanpot Championship game pinned Harvard and Boston College (14-24) against one another. The Crimson (9-31) got there with a 1-0 victory in a pitcher's duel against UMass. BC came away with a 6-1 win over NU in its first round game. The Eagles have beaten the Crimson in 14-straight games, however many of them have been close, including a 10-9 victory over the Crimson in last year's Beanpot.

The Minutemen's next game will be Friday when they take on No. 26 Charlotte (31-9, 11-4 Atlantic 10) in the first game of a three game series at home at 3 p.m.

The 49ers, winners of seven of their last 10 games, currently stand at the top of the conference and should be a good test for UMass.

"[Charlotte's a] good ballclub but a very different ballclub on the road," said Stone. He added that the Minutemen will have to be playing their best baseball in order to compete.

The 49ers are currently 25-5 on their home field, with four of their nine total losses coming on the road.

Eric Mansfield can be reached at eamansfi@student.umass.edu.

UMASS ATHLETICS

Right-hander Ben Hart pitches against Northeastern. Hart earned the win in UMass' 4–2 win over the Huskies on Tuesday.

JEFF BERNSTEIN/COLLEGIAN

Junior Jordan Storro fields a ball against Syracuse for the Minutewomen. UMass prepares to face Boston University on Wednesday, a team the Minutewomen defeated, 3–2, earlier this season.

In-state rivals return

By Pete Vasquez
Collegian Staff

The Massachusetts softball team is beginning to look like its dominant self in the Atlantic 10 conference.

After another successful home campaign this past weekend, the Minutewomen (21-15, 10-3 A-10) look to strengthen their intimidating presence in the northeast as they take on Boston University on Wednesday in Amherst.

UMass has won four of their last five games and are in the midst of a 12-game home stand. Three of the wins have been tight, one-run affairs including the most recent thriller on Sunday over George Washington.

After falling behind by four runs, with two innings left, the Minutewomen scored two runs in the sixth courtesy of RBI singles from Tiffany Meeks and Jordan Storro. Audrey Boutin's two-run home run, her third of the season, tied the game in the following inning and Kyllie Magill's run-scoring single in the first extra inning capped the walk-off comeback victory.

It was the latest walk-off win since Teea Rogers ripped the game-winning hit in the bottom of the seventh inning on April 3 for a 4-3 win over Saint Louis.

With BU on the horizon for the midweek contest, the Minutewomen will look to continue the success they showed against the Terriers as the Maroon and White defeated them, 3-2, back on April 6.

In that game, Sara Plourde pitched seven innings, giving up two runs on six hits and four walks for the Minutewomen. She struck out eight Terrier batters and saw her school record no-hit innings streak end at 18.2 innings when Brittany Clendenny doubled in the second inning. Plourde's shutout innings streak also ended at 23 innings on Holli Floetker's sacrifice fly in the same inning.

While BU (27-12, 9-3 America East) broke through against the previously untouchable Plourde, UMass did just enough on offense, scratching out runs in the third, fourth and sixth innings.

Following two groundouts in the third, the next two batters reached before Boutin stroked an opposite-field liner for an RBI single to score Lindsey Webster.

The next inning, Magill hit a 1-1 pitch with two outs for a run scoring single. Two innings later, Magill tripled home the final Minutewomen run to score Cyndil Matthew, who had reached base on an error.

UMass chipped away at BU starter Floetker, who went 3.2 innings and allowed two runs on four hits and three walks without a strikeout, while Erin Schuppert pitched the remaining 3.1 innings in relief.

For the season, the Terriers have primarily used three starting pitchers including Floetker and Schuppert as well as Whitney Tuthill. The trio has a combined 27-11 record, with Floetker and Schuppert teaming for a 19-6 mark. Tuthill has the highest earned run average of the three, sporting a miniscule 2.14 ERA in 13 starts.

Schuppert has gone 2-0 since her loss to the Minutewomen and is now 9-3 for the season, while Floetker leads the team with 10 wins.

BU is second in its conference, similarly to UMass, and is currently on an eight-game winning streak as of Tuesday afternoon. The Terriers' latest affair was a 9-0 romp at Hartford on Monday that lasted five innings. They're scheduled to play a game at Holy Cross on Tuesday before traveling to UMass on Wednesday.

Chelsea Kehr, who drove in a run against Plourde last game, leads BU with seven home runs as well as 35 runs batted in. April Setterlund and Jayme Mask lead the team with batting averages of .375 and .371, respectively. Setterlund was also a 2010 First-Team All-American and AE Player of the Year.

The Minutewomen own an 11-3 record versus the Terriers all-time.

No. 1 Virginia sweeps NC State over weekend to keep top spot

By Matt Lopes
Collegian Correspondent

Top 25 Baseball

The Virginia baseball team saw its seven-game winning streak vanish after the first game of Saturday's doubleheader with North Carolina State, but the Cavaliers fought back at home this past weekend to take the series from the Wolfpack, keeping a firm grasp on their No. 1 ranking.

After allowing a pair of runs in the first inning of the Game 1, NC State pitcher Rob Chamra retired 17 of the next 21 batters he faced, outdueling Virginia's ace Danny Hultzen to improve his record to 6-0.

Meanwhile, after a solid start from Hultzen in early going, the Wolfpack offense roughed up one of the top pitchers in college baseball in the sixth inning, scoring all six of their runs to knock off the Cavaliers, 6-2. It was the third loss of Hultzen's career, as the junior lefthander entered the game with an 8-0 record on the season, as well as a 1.17 ERA and an ACC-leading 99 strikeouts.

Virginia would not go quietly in the second half of the doubleheader, as they jumped out to an early 2-0 lead courtesy of an RBI single from Keith Werman in the second inning and an RBI triple from John Hicks in the third. Cavalier's pitcher Tyler Wilson took over from there, allowing one run on six hits through 6.1 innings to go along with seven strikeouts en route to a 3-1 victory.

The momentum carried over into Sunday for UVA (40-4, 18-3 ACC) as the No. 1 Cavaliers sealed their NCAA-leading 40th win of the season following the 7-6 victory over the Wolfpack. The Cavs' offense erupted for 12 hits while stealing six bases to jump out to an early 5-0 lead. NC State (24-18, 9-12 ACC) made it interesting in the eighth inning, as they rallied to pull within one run until UVA closer Branden Kline shut the door in earning his ACC-best 13th save of the season.

Virginia hosts Virginia Commonwealth Tuesday night at 6 p.m., while the Wolfpack open a three-game series against ACC-rival Maryland on Friday.

Texas A&M sweeps OSU

After falling to No. 10 Texas Christian earlier last week, Texas A&M bounced back this weekend in dominating fashion, outscoring the Oklahome State a combined 24-4 in the weekend series.

The Aggies (29-11, 14-4 Big 12) began the onslaught on Friday with an 11-2 thrashing of the Cowboys (28-12, 10-8 Big 12), followed by 5-1 and 8-1 wins on Saturday and Sunday, respectively. As a result, Texas A&M moved from the ninth spot to 13, while the Cowboys rose to 22nd in the nation.

The Aggies continued their offensive success as they combined for 32 hits in the series. Kevin Gonzalez led the Aggies over the weekend, going 5-for-10 with four runs and five RBIs. The senior catcher also went yard in the final game of the series for his second home run of the season. Sophomore outfielder Tyler Naquin came up big as well, finishing the series 6-for-10 with five runs and four RBIs, while freshman centerfielder Krey Bratsen went 7-for-13 with four runs, two RBIs and three stolen bases.

Both teams are in action again Tuesday night as Texas A&M plays host to Sam Houston State, while Oklahoma State looks to rebound on the against Wichita State.

Tar Heels avoid sweep

After dropping both games of a doubleheader on Saturday, 13-6 and 5-3, North Carolina fought back on Sunday behind the arm of freshmen southpaw Kent Emanuel to knock off Miami, 8-1.

Emanuel went the distance for his sixth win of the season to snap the Tar Heel's five-game conference losing streak. Emanuel allowed just nine hits and one run while fanning four in the win.

North Carolina catcher Jacob Stallings recovered from a 0-for-5 start to finish the series 4-for-7 with a pair of runs scored and a pair of RBIs. Freshman infielder Colin Moran kept his hot bat alive as well, notching two more RBIs over the weekend to bring his total to 54 on the year, good for first in the ACC.

Despite the loss on Sunday, the Hurricanes jumped from No. 24 to 14th in the polls, but still trail No. 1 Virginia and No. 8 Georgia Tech by a few games in the ACC Coastal division. Meanwhile, after dropping the series in Chapel Hill, the Tar Heels fell from No. 10 to No. 14 overall in the latest rankings.

Miami (27-13, 15-5 ACC) battles South Florida Wednesday night before hosting Florida State for a three-game series this weekend. North Carolina (32-10, 13-8) takes on East Carolina on Wednesday night a weekend off.

Matt Lopes can be reached at sportsop@wmua.com.

UMass takes 2-of-3 contests

UMASS ATHLETICS

The UMass women's rowing team maintained control of enemy waters as the team faced Holy Cross on Saturday. The Minutewomen took two out of the three contests.

By Ben Lambert
Collegian Staff

While the competition may have taken place on the foreign waters of Lake Quinsigamond in Worcester, Mass, the Massachusetts women's rowing team took control of its regatta against Holy Cross on Saturday.

Closing out the month of April, the Minutewomen earned the victory in two of the three races held. Even in the loss, in which the team had to change boats due to a winter storm damaging their boats, the Varsity Eight finished 1.1 seconds off of the winning pace.

UMass coach Jim Dietz, when discussing that race, let go of a bit of frustration.

"We should have won that race by twelve seconds," said Dietz.

But despite the tough loss, he was pleased with the overall performance. When summing it all up, Dietz said that "[it] went pretty well."

The Novice Eight got things off on the right foot for UMass. In the first event of the day, the Minutewomen crossed the finish line in a time of 7:59.00. The Holy Cross squad came across over 25 seconds later, in 8:25.00.

The Second Varsity Eight kept the momentum going in the next race. The team earned the second victory of the day for UMass, clocking in a time of 7:14.00. It was also the Minutewomen's second win by a double-digit margin of the competition, as they spread a 19-second margin between them and the Holy Cross boat, which finished in 7:33.00.

However, the Minutewomen couldn't notch the closest race of the contest. The Crusaders managed to avoid a sweep of the day's proceedings with a victory, finishing in 7:13.30. The competition came down to the wire though, as the Minutewomen raced in and came across 1.1 seconds behind at 7:14.40.

"We were in line to sweep the regatta, but we had a misfortunate accident in that the varsity boat ran over a submerged object and ripped the bottom out of the boat," said Dietz. "At the last minute, we had to take that boat out of the water because it couldn't be rowed."

With this regatta in the books, the Minutewomen are set to enjoy a two-week break before their next competition. They'll next take to the water on May 13, the date of the preliminary heats for the Dad Vail Regatta in Philadelphia, Pa.

This competition holds fond memories for the Minutewomen. Last year, they earned a gold medal in the Varsity Eight competition by knocking off second-place Georgia Tech. They also found success in the Pair races, as Kelsey Schacter and Emily Grogan worked together to notch a third-place finish.

However, the more recent past will not be on Dietz's mind.

"Stuff happens. Sometimes you can't tell what's under the water," said Dietz.

Ben Lambert can be reached at wlambert@student.umass.edu.

Stein discusses woes of America in Weds. visit

By Andrew Sheridan
Collegian Staff

On Wednesday, the University of Massachusetts was given a jolt of star power, as the UMass Republican Club hosted author, actor and commentator Ben Stein, who spoke at the Lincoln Campus Center. The lecture focused on issues affecting the future of the United States. After an introduction by the joint leaders of the UMass, Mount Holyoke College and Smith College Republican clubs, Stein greeted the assembly and jumped into a discussion of the U.S.'s economic situation. Detailing the problems of unemployment, single parenthood and income disparity, Stein used economics as a backdrop to discuss government and education.

According to Stein, government has a responsibility to protect the country from financial ruin, something that has been done only haphazardly in the past."My goal is to stimulate thought about the state of the nation and the economy," said Stein.

One topic that was discussed repeatedly was the U.S.'s relationship with China. Stein made the distinction that country became an economic powerhouse only after adopting free market principles, and asked questions about the shared future of the two world powers.

Stein criticized the classical Keynesian model of stimulating the economy by increasing government spending, saying that it had "failed during the Great Depression" and should not have been employed in the stimulus package endorsed by President Barack Obama in 2009. Also under fire by Stein was the method of cutting taxes to increase spending by the populace.

Another major topic of the evening was the national education system, which Stein views as being in dire straits. Of particular concern to Stein was schools' focus on improving students' self-esteem, rather than providing them with a solid educational foundation.

When told by a student that the national level of college loan debt had exceeded $826 billion, Stein replied jokingly, "Well you're all really f**ked, then."

A far cry from the drab mono-

SGA addresses tobacco ban in session with Vice Chancellor

By Ashley Berger
Collegian Staff

JEFF BERNSTEIN/COLLEGIAN

Commuter Sen. Dan Stratford spoke at Wednesday's SGA meeting, at which the Senate addressed the tobacco ban recently ratified by the Faculty Senate.

At Wednesday's Student Government Association (SGA) meeting, the Senate had the opportunity to ask Vice Chancellor Jean Kim questions about the administration's feelings and opinions on the recent and much-debated tobacco ban policy.

Additionally, the SGA also welcomed new faces to next year's cabinet, including Sens. Jarred Rose and Hayley Mandeville, who were elected as Speaker of the House and Associate Speaker, respectively. Graduating seniors of the Senate said farewell and offered advice to their peers.Vice Chancellor Kim took to the podium to answer inquiries regarding the potential smoking ban slated to go into effect in 2013.

"I was assured by the Faculty Senate that there was student representation when the Faculty Senate created the recommendation," explained Kim.

A strong opponent of the smoking ban, Sen. Josh Davidson asked how the Faculty Senate feels it had the authority or the responsibility to propose such a motion.

"The recommendation was not just for students, but would affect the campus as a whole," replied Kim. "Faculty and staff work here and live here. While you as a student senate may make these recommendations, the Faculty Senate does the same and then it goes to the provost and then to the chancellor."

An unsatisfied Davidson presented a follow-up question, asking, "Who has original jurisdiction? Students are primarily affected because we are the biggest body on campus."

"What the [Faculty Senate] can do is come up with various legislation that they think impacts certain parts of the campus," answered Kim. "But it is ultimately up to the administration to decide what the policy will be. Administration holds the jurisdiction."

"Faculty senate proposed what the wanted to see done and the administration took that proposal... Nothing prevents the Graduate Student Senate (GSS), SGA or the Faculty Senate from proposing any type of legislation that they see fit," she added.

Davidson replied, "The main point is that if we had presented legislation like this, we would not have felt the same reciprocation."

The SGA has been developing a motion for several weeks which would ask Chancellor Robert Holub to intervene and delay deliberation on the tobacco ban policy. That motion has been tabled until next year when Speaker Rose will present it.

Elsewhere last night, in his final address to the Senate, Student Trustee Mike Fox first acknowledged his stances on the proposed fee increases.

"I am voting against the base fee increase as a statement for the need of affordability and more innovative approaches by all advocates for our University," he said.

APD makes cocaine bust after report of gunshots Tuesday

The Amherst Police Department responded to reports of gunshots fired on East Hadley Road Tuesday evening and ultimately discovered something quite different. When officers responded to the scene at 11:14 p.m. that night, they stumbled upon Holyoke resident Somrathona S. Soeng, who was allegedly uncooperative with the officers investigating the reported shots.

Soeng was initially arrested for being a disorderly person, and police were unable to locate a firearm or the individual who allegedly fired it, according to a Thursday morning release from APD Lt. Ronald Young. However, when police questioned Soeng, they discovered a large quantity of cocaine ready for sale and what the release called a major amount of cash.

The 21-year-old, whose listed address was 98 St. James Ave. in Holyoke, was taken into custody and charged with disorderly conduct and possession of a Class B substance with intent to distribute.

Soeng was arraigned Thursday morning in Eastern Hampshire District Court in Belchertown.

According to the website of the Boston criminal defense firm Altman & Altman, possession with intent to distribute cocaine can carry a sentence of up to 10 years in state prison or two-and-one-half years in jail. Disorderly conduct is punishable by up to six months in jail or various fines.

Young's release said the matter remains under investigation and that there were no reports of any injuries stemming from the reported gunshots.

Over 400 students win Ben Stein's knowledge

STEIN from page 1

tone that he is known for in TV and film, Stein kept the audience engaged throughout the event. Grim societal commentary was broken up with stories of his family, friends and TV experiences. These stories got frequent laughs from the assembly, and also served to further his points about the state of the nation.

"We chose [Mr. Stein] as a speaker given the timeliness of his topic, relevance to students and wide recognition as a prominent actor, commentator, novelist, etc." said UMRC president Justin Thompson in a recent email interview.

While previous speakers invited by the Republican Club have been met with harsh protest from the primarily liberal campus community, Stein received a warm welcome from the over 400 in attendance.

A majority of the questions asked at the end of the lecture were chiefly respectful in nature. Two students did attempt to confront the speaker about his more controversial views, but Stein dismissed the questions and said they were poorly-thought outd the students received little support from the audience.

Known by many for his work in film as well as his Comedy Central game show "Win Ben Stein's Money," Stein is also noteworthy for his involvement in many fields of academia and government. Over the years he has worked as a lawyer, professor, presidential speechwriter, author and journalist.

"I'm all of those things," said Stein in a post-lecture interview, when asked how he defines his career. "I want to be a communicator. I want to make people laugh, laughing is good for you."

Andrew Sheridan can be reached at asher1@student.umass.edu.

Rose to be '11-'12 speaker; Mandeville will be associate

SGA from page 1

Fox, generally a representative that votes down any type of fee increase, voted for the Flagship fee. He explained, "We are the flagship institution of Massachusetts public higher education and as such, we need more money."

As a departing senior, Fox presented a few lasting remarks to the Senate body about his experience in the SGA and imparted some words of wisdom to the members remaining in Senate for next year.

"Most recently I've learned that service doesn't always earn recognition," he said. "Take pride in the fact that whatever work you do, as long as it spreads good in the world, it is significant."

"Without our passions and our desire to serve, this room is hollow," he added. "Keep reaching out to new groups on campus, never view yourselves as reaching a plateau of accomplishment. Make this room ever more relevant by always accepting new ideas and views."

Speaker Modesto Montero gave a similar speech of appreciation not only to the Senate but also to a variety of programs on campus that in some way affected his time as Speaker.

Associate Speaker Tina Kennedy and committee chairs also gave their thanks.

The Senate then moved to nominate, elect and appoint the new Speaker of the House and Associate Speaker.

Sens. Rose and Paola Ozuna were nominated for the speaker position, which they accepted. Sen. Dan Stratford was also nominated but declined.

Sens. Mandeville, Nick Barton and Andrew Eaton were all nominated for the position of associate speaker.

In an 18-11 vote, Rose was appointed speaker. With 19 votes, Mandeville was elected to the position of associate speaker.

The positions went into immediate affect as Rose took the podium to call the special orders of appointments and further main motions.

The meeting continued with the appointment of the new cabinet members.

Current Attorney General Kyle Howard was re-appointed to the position. Timothy Katz was appointed to the position of chief of staff. The secretary of sustainability position was given to Cameron Kackley.

Avae Thomas was appointed as the secretary of policy and external affairs. Current Chair of Finance Ben Johnson was appointed as the secretary of finance. Matt Rheault was sworn in as the secretary of web management.

The four-and-a-half hour meeting was brought to a close at 11:30 p.m. when custodial staff arrived. Next week's meeting time is to be determined but will deal with the budget, which wasn't presented in its entirety during last night's meeting.

Ashley Berger can be reached at aberger@student.umass.edu.

"The price of anything is the amount of life you exchange for it." —Henry David Thoreau

EDITORIAL@DAILYCOLLEGIAN.COM

The 4-year face slap

Nick O'Malley

(Author's Note. Dear potential employers. I see you've found a column I've written just before my graduation. Please don't think of this as a sample of journalism. Rather, think of it as an open letter to college.)

My parents told me I'd like college – probably too much.

And I did. But it pains me to know that, like everything else in the world, there are few paradigms. We'd like to think that education is a simple progression: 12 years of primary school then four years of college.

But not everyone gets the four-year ride, the dorm experience, the freedom of the real world without bills. But this column isn't about them – they usually know the deal. For those who don't, that's what college is for, it's for slapping you in the face and telling you to take what you want out of life, not what's in a textbook. A degree's just really handy for getting internships and jobs.

Here's a secret: The college experience is not about taking classes and getting a good GPA. This whole college thing is a social experiment designed to un-teach students. It doesn't just tell them the answers to exam questions. It teaches them to look at the world and say: "This is stupid. I'm doing something else."

There's no one keeping you in that lecture hall. You're free to go. You're paying for the class, so you can leave whenever you damn well please. You could. It's late April and, if you don't know most things for your final at this point, you're kind of screwed anyway.

That final, though, isn't the measurement by which education is measured. Believe it or not, there's not that much of a difference between getting a 4.0 for a semester and going to Barcelona to drink and stay up until 7 a.m. every night for a week. The biggest difference is you'll learn more from the latter.

So, what should students do? Go off and do stupid things, that's what. Like writing a column in a list format. Journalism-wise, it would make Edward R. Murrow (one of those guys you're supposed to have heard of, you know) roll over in his grave. Also, use parentheses and clichés. It drives my night editor crazy. (She thinks it sounds like you're a creep whispering in her ear. Underpants.)

1. Learning is less about a thesis adviser you meet with once a week senior year. It's the Girl Across the Hall from freshman year. It's the guy who didn't care if you messed up, kissed you and gave you the one thing you really wanted in the world – probably a Reese's Peanut Butter Cup.

2. Papers are meant to be written at 3 a.m. That's when great thinking happens. Far too many people have attempted to write sober and on enough sleep. Those topics are trite. Truly great ideas rise with the sun, when your pants are nowhere to be found and you're at that point in sleep deprivation where you start to hear stuff. Screw the typos; that's the paper your professor wants to read. Just make it work.

However, staying up until 4 a.m. to write this when you have to get up in four hours for a job interview is probably less wise.

3. On the nights when a paper is not due, there is still no reason to sleep.

Freshmen, take advantage of your youth and vitality. There was once a time where a select few of us would stay up until at least 4 a.m. talking about, well, nothing in particular, only to wake up four hours later. Who knows why? Maybe it's because the Girl Across the Hall liked your I-guess-he's-attractive roommate. Maybe she's into you. You didn't ask, did you? Wuss.

Also, that guy you're into. He might be the one with the peanut butter cup.

4. Learning, though, is about making mistakes. It's less about understanding the means of production on one read through and more knowing about how to get a dishwasher to not overflow with foam to the point where you spend the next hour cleaning it. And you know what? It wasn't that funny, because maybe you've never used a dishwasher before, and the dishwasher is stupid anyway.

What? Shut up.

5. Break something. Do it. Stuff doesn't cost that much money. The proportion of stories that are awesome and involve stuff-breaking to those that are boring and don't involve stuff breaking is too big to ignore. Also, don't bother with logic. Logic is living in the past of two sentences ago and got left behind because it's busy dealing with the "asinine statement" I just made. That guy sucks anyway. He thinks Star Wars is stupid because no one can tell him why the lightsabers only go up to a certain length.

6. Mess with people.

Hello Chelsea. Are you enjoying editing this column? I know you have the first look at it. I should warn you, though. I've intentionally placed two typos and an AP style error earlier in the column. Did you find them? Delete this if you dare, Chach.

7. Find your paradise. This was advice given in a senior column years ago, and it's really just too good to not steal.

I once tried this in Canterbury, England. I took a bottle of Golden Champion British lager and went out to a park bench overlooking the city while everyone had fallen asleep. It was a stupid idea and I was kind of cold the whole time. I forced it.

Paradise finds you. For me, it's is a stretch Escalade in Miami after leaving a club that was part of a two-night package that you were so sure was a scam but sounded so tempting. Katy Perry's "Firework" plays in the background while you do nothing but yell nonsense and take pictures for five minutes before you get to the next club. For those five minutes, the drama that was building and would later erupt three hours later with everyone crying is irrelevant. Just enjoy the five minutes.

8. Once upon a time, I wrote about things. That time is over. I'm graduating in three weeks and I fully intend to use my favorite writing style: mindless nonsense that's hopefully funny and has an underlying point.

9. Screw underlying. Don't get caught up in classes and work all the time. Try to do some things you'll probably regret, otherwise you'll regret it.

10. Don't be a cheapskate like me. Buy people some drinks. The first person who doesn't work for this newspaper to text me about Item No. 10 gets a free beer. Please be over 21.

(Editor's Note: Despite this running online on Thursday, this offer is renewed for the print edition Friday. The Collegian is invoking Item No. 6, Nick.)

11. OK, so, the key to integrating into college is to remember that, even though you've never met the kids around you, they probably liked the same things you liked. So if you and your friends all loved playing Mario Kart 64, other kids probably did as well. Also, force new people to be friends with you and don't hang out with people you went to high school with.

12. Just go with it. At no point did I expect this to be a list of advice. It's also really long. But no, we've gone too far. Screw it, we'll do it live. Run it, Ms. Night Editor.

13. Take naps when you can. Like right now. I'll wrap this column up tomorrow.

Nick O'Malley is a Collegian columnist. He can be reached at nomalley@student.umass.edu.

Healthy choice?

Emily McGovern

A few years ago, in an effort to make a healthy change for myself, I gave up soda for Lent. Beforehand, I had been drinking soda just about every day which made this a particularly difficult task, but I made it through all 40 days and 40 nights.

The hardest part about refraining from drinking soda was that other people around me were drinking it – enjoying the ice-cold, bubbly sweetness that fizzed and foamed on a hot day. But still, I remembered that I had made my decision because it would be good for me, and I knew I would be all the more pleased with myself for persevering of my own will.

Yet, earlier this month, Mayor of Boston Thomas Menino undermined my ability to make this kind of decision for myself, announcing that all soda, sweetened iced teas and sports drinks will be banned from Boston's city property.

In a press release, he proclaimed, "I want to create a civic environment that makes the healthier choice the easier choice in people's lives."

We don't need our choices to be easy; we just need them to be our own. The city of Boston is not an overweight child in need of a parent to tell them not to have any sweets before bedtime. If we can vote, drive a car, drink alcohol, raise children and go to school, I think we can handle the choice between juice or a Coke.

Instead of taking our options away, he should add new ones. No one is stopping him from setting up vendors that provide healthy drinks in the city.

Boston's Public Health Director Barbara Ferrer said in a Boston Globe article, "We're not banning people buying them at supermarkets or at the corner store. What we are doing is sending the message that you don't have to sell soda everywhere."

No one ever said that soda has to be sold everywhere. It's sold because that's what people want, and it makes money. What's wrong with giving the people what they want? It's simple supply and demand. Taking it away doesn't make people want it any less.

There's no denying that obesity has become a serious issue in the U.S. The Center for Disease Control says that "During the past 20 years there has been a dramatic increase in obesity in the United States." In addition, "Thirty-three states had a prevalence [of obesity] equal to or greater than 25 percent."

This is clearly a problem, but soda is not the enemy here. We can only blame ourselves for our everyday choices of what to eat and drink, and how much we exercise. There are plenty of other factors involved in this country's change in weight.

Mayor Menino showcased his inability to grasp this concept at his unveiling of the city's new bike-sharing program, which he had catered by Boloco. It seemed contradictory to me that he would ban soda, but hand out free burritos to anyone with a bike helmet, so I looked into the nutritional values of both products.

A classic Mexican pork burrito (original size) on a flour tortilla with cheese, cilantro, rice, beans, and salsa contains the following: 1,122.94 calories (428.72 from fat), with 73 percent of our daily value of fat, 50 percent of cholesterol, and 125 percent of sodium. An eight ounce bottle of Coca Cola has 100 calories, with no percent of our daily value of fat, one percent of sodium and nine percent of total carbohydrates.

When these people were given free burritos for their participation in the event, I'm sure that making the healthy choice wasn't easy. But didn't Menino say that his goal in banning soda was to make the choice to be healthy easier? How can he justify preventing people from buying an unhealthy product while he shoves calorie-packed burritos in their faces?

Emily McGovern can be reached at emcgover@student.umass.edu.

LETTERS to the EDITOR

Editorial@DailyCollegian.com

FIRST YEAR FEARS

Dear Editor,

I am a first year college student at UMass. I, along with many other college freshmen, feel more stressed than ever this year. Collegian writer Nancy Pierce's [reporting] is correct in her Feb. 6 article "College freshmen more stressed than ever." Students want their college experience to be significant, successful and satisfying. Coming to college, I knew it was going to be tough. The work is overwhelming, and I feel the need to do well in order to fulfill my parents' investment in my college career. I think it is safe to say I feel more stressed with school than I ever had before.

The New York Times article, "Record Level of Stress Found in College Freshmen" on freshman stress levels is similar as well. This article talks a lot about the economic difficulties with students and their families. The article mentions the recession, and points out that the economy has only added onto the stress of students.

The Chicago Tribune also had an article on the topic, "Small Talk: Are college freshmen more stressed than ever?" They noted a survey that found that among the 200,000 freshmen asked, only 52 percent said their emotional health was above average, which is the lowest percent since 1985. Stress levels for college freshmen need to be lowered.

Sincerely,
Ricky Belsky
UMass Student

SMOKE SCREENING

Dear Editor,

I believe that the Faculty Senate's plan to ban tobacco on campus is insane. Even though the Faculty Senate say that a healthy lifestyle and improving campus life as their motivation to implement the ban it seems that they have lost sight of those they are supposed to be looking out for. Although their intentions seem harmless, they are trying to keep students with stressful lives and workloads from indulging in a cigarette.

Students on campus are in fact adults and if their only way of relieving stress is a cigarette they should have the option to do that. UMass has long attempted to improve its partying image and the ban seems to be the next step in their quest to promote a safe campus. I think that they are using the health of the campus as a smoke screen so that they can advertise that their "smoke-free campus" as an attractive part of campus life.

Erin Lima-Kilgallon
UMass Student

AVERTING ATTENTION ON TRUE ISSUES

Dear Editor,

After initially hearing about the smoking ban on campus I was intrigued. But upon further investigation, I feel that it's not addressing the real issue at hand and that it's infringing on students rights. With serious budget cuts coming in the next few years, the schools resources would be better used by offering counseling to those who want help, not by stripping liberties from students. It appears that the Faculty Senate is more interested "in making a statement than looking out for the students."

The issue isn't about second-hand smoke if they're banning all tobacco products, which asks, "What are they trying to do?" I support a healthier campus, but it appears that the Senate doesn't have the student body in mind. UMass Professor Tobias Baskin makes an analogy to the ban being similar to signs telling people to not throw away gum in water fountains.

This is a poor comparison, as those who are throwing away gum in fountains are not addicted to this act. This course of action being taken by the Senate isn't addressing the real issues and the school could allocate their resources more wisely by offering help to those in need.

SNOOKI VISIT A MISTAKE

Dear Editor,

On April 10, I read the article "Is a Snooki University Lecture Worth 32K," and was utterly disgusted with the fact that Rutgers University spent $32,000 to have Snooki, from the Jersey Shore, as its guest speaker.

Not only is Snooki a terrible role model on National Television, but Rutgers paid her to talk about her partying, tanning and sex life. I don't know about you, but I personally wouldn't pay $32,000 to listen to someone tell me how to ruin my liver, get skin cancer and possibly catch a sexually transmitted disease.

Although Snooki is famous, and it would have been cool to meet her; it makes me wonder if Rutgers thought about what it could do with $32,000. Did they think about the people suffering from the tsunami in Japan or the earthquake in Haiti?

The students could have at least paid for a more reputable speaker. Snooki's advice that she gave to the students at this prestigious school was to, "study hard, but party harder." It's incredibly sad that Rutgers paid Snooki this large amount of money instead of putting it towards a better cause, or getting a more professional speaker.

Regards,
Stephanie Hill
UMass Student

BOOZE FUELS FOR MONEY

Dear Editor,

I am writing in response to an article written by Yaroslav Mikhaylov entitled "The Mullins Center Needs to Serve Alcohol" on April 4. Many parents come to games to support their children. Because alcohol is not allowed in the arena, attendees are forced to pregame before the big event if they want to get their buzz on.

In a 2007 survey done by ESPN, "Should Alcohol Be Allowed at Games," many athletes felt that if a school is charging admission, alcohol should be served. It was unanimous that selling alcohol would boost the attendance to games. Student athlete Tyler Henley from the Rice baseball team in the survey said, "the alcohol policy for a sporting event should be left up to each school and its athletic department…"

My last point is that the NCAA rules and regulations merely suggest that stadiums and arenas do not sell alcoholic beverages. So why does it seem that UMass is allowing students to pregame instead of allowing those who are legally of-age to drink at these sporting events? I will quote Mikhaylov when I propose, "how about installing a bar [at the Mullins Center] this summer?"

Sincerely,
Jeslyn Gordon
UMass Student

BAN INEFFECTIVE MEASURES

Dear Editor,

I believe that the tobacco ban on campus will ultimately be ineffective. Personally, I choose not to smoke, but I support every person's right to do so. Many students smoke because they feel stressed out from their work and are looking for a release. What gives anybody the right to tell students they can't smoke while they are trying to cram for a test or write a research paper? This ban would be similar to not allowing an adult to smoke at home or in their car.

As stated in William Perkins' April 7 article, "UMass Faculty Senate Passes Campus Tobacco Ban," the policy will be voluntary and not enforced by most cops. If the policy is not enforced by police on every occasion, the law will be ineffective because the punishment isn't clear on smoking. In order to be effective, a ban would need to punish every violation. Since it is voluntary, people will push the envelope, which will result in the policy's demise.

Sincerely,
David Westland
Amherst, Massachusetts

Following God?

Chelsea Whitton

Recently I officially signed up for Twitter, not that I hadn't been on it before as I had about five different accounts under pseudo names for no apparent reason. So I got rid of those and signed up with my real name and started following some news organizations, magazines, environmental groups and political pundits.

Twitter, the social media network that enables individuals to receive newsfeeds from other persons and organizations, of course implies that you will "follow" people and organizations. It is designed to keep people up-to-date on news, events and keep track of people you find interesting through constructed messages. However, I signed up with the Internet site curious about the word "follow." I found myself asking, "Does God have a verified account I can follow?" He doesn't have a Twitter account, just incase you're wondering.

But if he did, life's answers surely could be found more easily this way. We could get quick updates on what he's thinking about the world. He could send messages such as, "Folks today there's going to be a lot of tectonic plate movement, brace yourselves, but I still love you," or on Christmas, "Happy Birthday, Son."

This questioning and deep inflection into social media platforms came to fruition after a weekend visit back home for Easter. The holiday inspired me to go to church. It's not that I didn't want to go, as I truly do believe Jesus died for my sins.

In any case, church opened up with the usual upbeat music. Then, the lights went down and we saw on the projection screens a multimedia slideshow that described the crucifixion and resurrection of Jesus.

Nothing new right?

Right, except the multimedia production was narrating the biblical resurrection story as if it were being posted on Twitter. Would Jesus approve? I really don't know, but found it worthwhile to ponder.

The video, by Igniter Media, begins by someone typing into the Twitter box asking, "What's happening?" and then tweeting, "Prepare the way for the Lord." Next, the video displays tweets of disciples with photo icons speaking about the whereabouts and good-doings of Jesus right before his death, posting tweets and tiny URL photo links about Jesus' work.

Then Jesus' Twitter account pops up where his bio reads, "The Way. The Truth. The Life," and the clicker on the page presses, "Follow," in which a count of follower increases steadily into the thousands. The video includes hashtags "#Blashphemy" and "#Unbelievable." The story told on Twitter in small sentences is a narrative loosely based on biblical accounts.

I guess my cringing during this presentation was due to the loose connection to the actual words recorded in scripture of what happened between the death and resurrection of Jesus.

Is it irresponsible of the church to use social media tools so familiar to them that church attenders have not a choice but to be drawn to? Why is it that the church believes social media is much more captivating than just spreading the word about God by itself, in scripture form? If they held to normal tradition wouldn't God's word be powerful enough in itself?

While using Twitter and other forms of social media may not be the traditional way to spread the word of God, it could actually be the right thing. In the church's mind it could prove to be a new easy-to-reach way of spreading the word about something they believe to be accurate and true. I wonder if churches have considered the ethical dilemmas about showing a 300-member church a powerful sideshow chronicling Jesus' death, filled with both traditional imagery of God and imagery of new media, blended together.

Will this make God more approachable, visible and accessible in a world packed with tiny URLs and billions of messages? I'm not sure at all, but I am sure that it's not a bad thing that people are finding God in some sort of way, in a world bogged down by disaster, financial burden and economic collapses.

It could make sense right? God changes with the times, I mean he hasn't struck New Jersey with lightening after MTV's airing of the "Jersey Shore" or Fox News for its informative "messages," of truth. I want to believe he is a God changing the ways his messages get out too.

What do you think about God's message in social networking tools? At first I was reluctant to admit to liking the use of social media for the church – to use a Christian cliché, for "worldly" reasons. However, "worldly" doesn't necessarily mean without God.

The production and complete text of the Bible took three things – people who had faith and then people who were then willing to proclaim their faith. Lastly, it was completed by people who were willing to follow God, spread the word about him and then write about his word in day-to-day life. It took people connecting, inspiring, voicing the message, proclaiming what was held to be true, corresponding by travel to send letters, documents gospels and teachings to see the Bible as a highly influential piece of history. Maybe social media is what it takes in today's world to communicate an ancient text and in my mind applicable text. Only God knows.

Central gets ready to Fill the Hill

Futurenows ready for the show

By Kate Evans
Collegian Staff

Folk rock band The Futurenows has been in the works since dorm-room living three years ago. The four-piece ensemble from Amherst combines bass, guitar, drums, banjo, original songwriting and lots of soulful singing. University of Massachusetts seniors Brian Goss, Sean Nolan and John Shaver teamed up with Greenfield resident Tony Interlande to form the locally popular band, which is performing at Maximum Capacity in Chicopee on July 8 and this Saturday, April 30 at The Collegian's Second Annual Paper Jam.

Originally a trio, Goss, Nolan and Shaver began performing at the Greenough Sub Shop during open mic nights. The group asked Interlande if he wanted to play drums with them, and, from then on, they were a quartet. After playing together for a while, the unnamed, mixed genre group found a name more casually than planned. While hanging out with Goss and Nolan, Shaver accidentally used the nonsensical phrase "future now." The word-vomit name stuck, and the band has become known as The Futurenows among campus and local communities.

Desiring to stand out among a sea of over-played, flashy guitar solos, The Futurenows base a lot of their music around harmonies and songwriting. Although the members do love good guitarists, they felt the urge to explore other areas of music.

"There's not really a lot of people who are doing vocally-driven music lately," said Shaver of their new-age genre. "It's a little bit more organic, but at the same time still pretty rockin'," he continued.

Shaver emphasized the importance of having four bandmates that can all sing well.

"We all do three- or four-part harmonies on every song, and it's something we don't hear in a lot of music lately," he said.

The group released their first collection of recordings on July 9, 2010, titled "Handsome Ballads." Not fully satisfied with their debut release, a full-length album has been in the works for quite some time now. The Futurenows ideally plan to release the album by the end of May.

"The process has been so long and tedious, but awesome at the same time," said Shaver of the upcoming album.

In the midst of their hectic scramble, the bandmates have still managed to add a brand new member. UMass senior Isaac Wainstein recently hopped on board with The Futurenows, bringing his piano and accordion with him.

"That just added a whole new level to our sound, because there aren't a ton of bands that have an accordion," said Shaver.

To hear more from The Futurenows head to the Paper Jam this Saturday or check out their Facebook fan page.

Kate Evans can be reached at kvevans@student.umass.edu.

Brendan Ryan emerging locally

By Ashley Berger
Collegian Staff

The beginning of this spring semester brought lots of snow, class cancellations and the emergence of a new pop-rock singer in the University of Massachusetts student community.

That singer is 21-year-old senior communications major Brendan Ryan, who is set to play at The Collegian's Paper Jam this Saturday.

"Earlier this semester I wanted to finally start getting my songs out there. I had played in bands and been writing songs all throughout college but never released anything official to the public," he said.

Ryan then entered to perform in the Battle of the Bands and got in, but he needed a band to back him up. The collaboration happened the night before the event to rehearse, but, despite the short amount of time they had together, the came in third place. "Since then we've played some other gigs. It's been great," said Ryan of his experience so far.

"It was crazy. The first time we played together, it went really well. I love all the guys in the band. They're some of the most talented guys I've ever met," said bass guitarist Sean Nolan, a senior at the University of Massachusetts.

When advertising the quartet goes by the name "The Brendan Ryan Band." Aside from Ryan and Nolan, the band is composed of sophomore lead guitarist Jake Goldman, and freshman drummer Matt "Crisco" Criscuolo.

"Formally it is 'Brendan Ryan' and these guys back me. But there is so much input from all of them that when we play, it's weird not to include the full band on the bill. We hadn't come up with anything official for it so people booking us just started advertising it as 'The Brendan Ryan Band,'" explained Ryan.

Ryan describes the musical genre of the band as pop-rock with an emphasis on pop. In February, Ryan released a self-written and self-recorded acoustic EP titled "Something So Amusing." In the week of its release, the EP had been downloaded over 500 times.

Big-time names have been among those who downloaded "Something So Amusing." The vice president of Sony Music got a hold of it. "I hope to hit the studio over the summer with a producer to lay down an official full-out EP," Ryan said.

"Inspiration for my songs come from everywhere. I'm not ashamed to say that a lot of my songs are love songs, and many I think could be considered 'Anthems for The Shy Guy.' I try not to limit myself to any topics. It's really just what's being thrown at me in my life at the time," he continued.

"With the band, I love playing my song, 'My Last Straw.' I had written it a week before the Battle of the Bands and wasn't even used to playing it myself. But the band added so much to it. We do a pretty cool version of 'Rock Your Body' by Justin Timberlake [where] we feature Maddy Maggio from Kids On A Hill," said Ryan of the variety the band enjoys experimenting with.

Ryan has big dreams for the future and is determined to make them come true.

"Music is my only plan as of now. I figure this is the age to try to make it. It's extremely competitive but if I don't at least try now, I'll regret it later," he said.

Ashley Berger can be reached at abergera@student.umass.edu

The Hill is alive with the sound of music

The Cubbies get their paws on Paper Jam gig

John McLellan

People have asked me about The Cubbies. They've said, "John, aren't cubbies what kids put their stuff in before kindergarten class? What's this I hear about a musical band?"

It's at this point that I would take them by the shoulders, sit them down comfortably and proceed to give it to them straight.

Consisting of singer bassist Jim Cobb, guitarist Neev Blume and dummer Pete Arsenault, the Cubbies are a new school rock band putting a fresh spin on classic tones. In order to properly describe the type of music one can expect to receive at a Cubbies event, it's going to be necessary to employ an elaborate allegory.

Take some time, shut your eyes, and imagine yourself at the raddest party in existence. However, this is not an ordinary party; there are no people. Rather, the attendants are transcendent beings made up of different aspects of what we know as music. Over by the drinks, two of these spirits are really hitting it off. It's getting hot quick, and they head upstairs for a little nectar, if you catch my drift. It's important to realize that at this point in the story, these two beings are representative of Mick Jagger's attitude and 90s alt-rock, respectively.

The fusion of these essences brings forth a unique amalgam of modern musical qualities that soar back to our dimension and are expressed by the Cubbies. Quite simply, it's classic rock shuffle with a keen awareness of modern trends.

Recently, the band has been playing shows all around the University of Massachusetts area, including two sets at the Franklin dining commons. Not only do they entertain musically, but they also bring homemade bread to most of their shows and tend to make enough for everyone. It's really some of the best bread I've ever had. It makes sense because they tell me they used to be dads. They have a demo available at soundcloud.com the-cubbies.

John McLellan can be reached at jedgerly@student.umass.edu.

Jazz group will help Shape 4/30 concert

By Kate Evans
Collegian Staff

Having performed at local hotspots such as Pearl Street and the Iron Horse in Northampton, The Shape is partaking in this weekend's Paper Jam. The three-piece improvisation and jazz band consists of all current and former University of Massachusetts students. Senior Matt Ely plays guitar and is The Shape's lead vocalist while sophomore Mark Goodwin mans the drums. Bass player Andrew Jaquith has already graduated, but that hasn't stopped the band from working on their debut album.

After having only been together for one year, The Shape is releasing a self-titled album by the end of May. They also just hired a booking manager for the summer, and Goodwin hopes to play a few festivals and book a few opening spots. The Shape has already performed locally and at venues in Boston, so Goodwin's goals shouldn't be too difficult.

"We're all in it to win it," said Goodwin. The percussionist elaborated, "We're all pretty serious about it, and intend to play in this group for the rest of the future."

The band's heavy jazz influence can be attributed to Ely and Goodwin's majors. Both students are jazz majors and were put in the same jazz combo.

Goodwin summarized the contemporary, noisy rock band as something along the lines of, "Radiohead meets Phish."

As for the somewhat ambiguous name, The Shape is partially influenced by Talking Heads lyrics about shapes. The other basis for the title stems from the Boston-based jazz group The Fringe. Goodwin used to take lessons with the band and admired their broad name.

"We wanted a name that would be cool and weird, but at the same time a really common word," reflected Goodwin. "There was no eureka moment; it just kind of happened."

The Shape can be found online on Facebook, Myspace and as of moments ago, through their official website, Theshapeisreal.com. A recording is available on the website for viewers to check out The Shape's style.

The improvisation jazz band will be performing from around 3:50 p.m. to almost 5 p.m. at the Paper Jam on Saturday on The Hill.

Kate Evans can be reached at kvevans@student.umass.edu.

DJ Desert Storm to stir up beats on Sat.

By Amy Larson
Collegian Staff

Among the talent to be showcased at this weekend's Paper Jam, DJ Desert Storm may know the most about hard-hitting bass lines.

Desert Storm, known out of the spotlight as Hasan Zaidi, is a budding DJ extraordinaire ready to take off from Amherst for the high skies of the electronic atmosphere.

Desert Storm crafts original mixes by synthesizing catchy samples from well and lesser known artists with explosive bass and drum lines. This is a style known as "dubstep" which has become increasingly popular in the U.S over the past few years. But Desert Storm's take on dubstep is far from imitative and offers a refreshing taste of the style for partygoers.

He aims to mix electronic music with samples that audience members can recognize. But he is no slave to trends and one hit wonders. Desert Storm's main focus when he is on top of the crowd is to play music that he thinks "sounds awesome." His mix tapes include remixes of tracks like "Forever Lost" by Pretty Lights, "Lift Me Up" by Moby and "Bass Head" by Bassnectar. Fellow DJ acts Bassnectar and Pretty Lights are two of Desert Storm's main influences.

The DJ cites his exposure to Bassnectar as the reason he immersed himself in the reverberating realm of dubstep. He even now works with the AmBASSador Program, which is a group of volunteers (many Bassnectar fans) who work to establish a fun and safe experience for people at electronic dance music events.

Recently, DJ Desert Storm had the opportunity to open up for the latter of the aforementioned influences. His victory at the UMass DJ Wars competition on April 7 granted him the prize of opening up the Spring Concert at the Mullins center where Pretty Lights was the headliner. This summer he has plans to take on similar crowds at clubs in places as far as Montreal and Colorado.

He has an unrelenting passion for providing people with a unique musical experience and it shows when he steps behind his table of electronics. The sounds he creates may be complex and synthesized, but his message is simple and sincere: DJ Desert Storm wants to share music to better the world.

Amy Larson can be reached at alarson@student.umass.edu.

FAN ZHONG

Country sensation Jason Aldean will bring his popular act to the Mullins Center tonight. The show begins at 7:30 p.m. and tickets are still available online or at the Mullins Center Box Office.

Aldean 'Just Passing Through' on Friday

BY KATE MACDONALD
COLLEGIAN STAFF

Country star Jason Aldean will be lighting up the Mullins Center, April 29. He'll be hitting the stage not long after openers Eric Church and JaneDear Girls during the seventh stop of his "My Kinda Party" tour.

The tour, which kicked off in Houston, Texas on Mar. 20, is named after his most recent, very successful album, which is currently number 13 on Billboard's Top 200 chart after 25 weeks.

Aldean's set list is sure to include the hits from the album, including the track also titled "My Kinda Party," which hit number two on Billboard's country chart. Other gems from Aldean's album include "If She Could See Me Now," "Tattoos on this Town" and "Church Pew or Bar Stool."

The tune "Don't You Wanna Stay," featuring the original American Idol winner Kelly Clarkson, is also one of the more popular songs off "My Kinda Party." Aldean is particularly proud of this song, which reached the top of Billboard's country chart. The two voices meld well together. Aldean, on his website, said, "As soon as she opened her mouth and started singing in the studio, it was like, 'That is what this song is supposed to sound like!'"

Some of Aldean's older hits, like the hit "Big Green Tractor" or "Hicktown" should prove to be Mullins favorites tomorrow night.

Aldean will appeal to not just country fans, but perhaps rock and even the odd hip-hop fan as well. His music is marked by rocking guitar riffs and a few rap-like verses, particularly in "Dirt Road Anthem." Aldean defended his multi-genre music on his website, saying, "I mean, I grew up in the South, in the country, and I love that lifestyle. But I'm not one of those guys that insists that's the only thing there is."

Aldean's set will kick off after Eric Church croons his song "Smoke a Little Smoke," and JaneDear Girls play "Wildflower," both of which have been very popular on the airwaves.

The doors to the Mullins Center open at 6:30 p.m., with the concert beginning an hour later. Tickets are still available, ranging from $37.75-to-$53.75.

Kate MacDonald can be reached at kaitlynm@student.umass.edu.

Deals and Steals live up to name

BY ACACIA DICIACCIO
COLLEGIAN STAFF

Being a poor college student means that most meals won't consist of more nutrients than whatever is provided in a package of ramen or Easy Mac, right?

Wrong. The misconception that healthy food is always more expensive has been misproven, thanks to the Northampton organic grocery store Deals and Steals.

This wholesale organic grocery store is a cheaper alternative to Whole Foods, Trader Joe's and even regular supermarkets. The food store is located on 7 Pearl Street, in Northampton, with plenty of parking and bus stops nearby for easy accessibility. Deals and Steals also has a store that sells discounted brand name clothing and footwear, which is located on 76 Pleasant Street in Northampton.

At first, shoppers will be overwhelmed by the low prices and be tempted to buy just about everything. But according to their website, "your dollar goes two to four times further at Deals and Steals." With most food items priced at $1.99 or below, just about everything is a deal. It is often the buy-one-get-one-free stickers that truly make the trip worthwhile, with this discount offered on a variety of an ever changing assortment of products. One thing shoppers should look out for, however, is the expiration date. This store seems to ignore the need to take expired food off the shelves, though since most of the goods are canned or dried, some extra age probably will not hurt.

Deals and Steals is the perfect local location for those with food allergies. An entire section of the store is devoted to gluten-free products. Because all of their food is organic or natural, it makes for a much better chance in finding allergen-free foodstuffs.

Any type of non-refrigerated item one can think up is most likely be on the shelves at Deals and Steals. From a huge selection of teas, to spices, drink mixers and microwave meals, this store has many choices that are healthier and cheaper than regular supermarket shopping. The store even carries 365 brand, the Whole Foods store brand, but at a lower cost. The inventory changes daily, making for a great selection of products.

Deals and Steals also carries organic dog and cat food and toys. There are also sections dedicated to natural health and beauty, cleaning supplies, as well as vitamins and supplements.

The one drawback of the store is that it does not carry fresh items, like fruits, vegetables, milk or eggs (though they do carry lactose-free and soy milk). Though this grocery store probably cannot take the place of all your dietary needs, the items that it does carry are well worth it. For the refrigerated section, the store does carry a variety of brand name organic drinks that one would likely find at Greeno Sub Shop, including Jones soda, Izze and Naked Juice, for under a dollar each.

Don't forget to grab some chewing gum on your way to the register, with Wrigley brands like 5 Gum and Orbit going for 50 cents a pack.

Hardcore organic foodies and those merely interested in improving the college diet will be delighted to learn that with just one visit to Deals and Steals, they will be saving money by purchasing wholesale as well as eating more natural foods. This store has been a secret from most University of Massachusetts students for far too long.

MARIA U MINSKY-COLLEGIAN

Jordan Storro heads for homeplate in a victory over ther Terriers on Wednesday. The Minutewomen host Fordham and La Salle this weekend after taking over the top spot in the A-10.

Fordham and La Salle head to Amherst for weekend matchup

BY PETE VASQUEZ
COLLEGIAN STAFF

Amidst all the theatrics and milestones on Wednesday, the Massachusetts softball team jumped back on top of the Atlantic 10 standings. However, with four games in three days forecasted this weekend, a lot can change by the time Monday rolls around.

After a quick visit from Boston University, which featured Sara Plourde collecting the 1,000th strikeout of her career as well as another walk-off win, the Minutewomen have a quick turnaround as they defend their top position in the A-10.

UMass (21-15, 10-3 A10) has overtaken Fordham, at least for the time being, as the teams meet for a two-game set on Friday, their first meeting of the season.

Although the Rams (34-17, 12-4 A10) have played three more conference games than UMass, the Minutewomen moved percentage points ahead with their doubleheader sweep of George Washington last Sunday.

Against the Terriers, Plourde became the third pitcher in program history to reach the 1,000-strikeout mark and the first to accomplish the feat prior to her senior season. Her 14-strikeout display on Wednesday sustained BU just enough, as UMass scored in the bottom of the seventh to take the 3-2 victory.

Cyndil Matthew singled through the left side to lead off the frame, advanced to second on a wild pitch and scored on a throwing error by Terriers second baseman Melanie Delgado.

Plourde's one blemish was a two-run home run to the No. 3 hitter, April Setterlund, in the top of the seventh. The two-run shot temporarily evened the game at two.

The once-first-place Rams are coming off of a three-game winning streak. In the last two matches, Fordham has outscored its opponents 18-0 and sealed both games in five innings.

The Rams also saw their share of milestones passed in the doubleheader sweep of St. Peter's on Wednesday. Junior Jen Mineau pitched her fourth career perfect game and senior Jocelyn Dearborn became Fordham's all-time hits leader while raising her average to .400.

Chelsea Plimpton nearly pitched her own perfect game in Game 1, allowing just one ball out of the infield, while striking out nine and facing one batter over the minimum.

The two aces, Mineau and Plimpton, have each won at least 16 games apiece while sporting earned run averages of 1.56 and 2.15, respectively. Together, they have compiled a 33-17 record this season.

While Plimpton, the senior pitcher, has pitched slightly more innings, Mineau has racked up 74 more swing-and-misses, notching 215 K's in 153 innings and holding her opponents to a .171 batting average.

Mineau was a 2010 First-Team All-American and currently leads the conference with four saves.

Although the Minutewomen have enough concerns dealing with the two-headed attack on the mound, the aforementioned Dearborn has proved to also be threat on the offensive side. Her 14 home runs and 40 runs batted in lead the team as do her 66 hits, 165 at-bats, .818 slugging percentage and .452 on-base percentage.

Beckah Wiggins and Gabby Luety have six and eight home runs to their names, respectively.

More numbers are sure to clash this weekend, as UMass own a dominant 11-1 mark at home while Fordham claims an impressive 10-3 record on the road.

Despite both teams appearing at even strength this season, the Minutewomen lead the lopsided all-time series with the Rams, 41-4.

Last season, UMass took four out of five meetings with Fordham. The lone win for the Rams came early in the A-10 tournament before the Minutewomen came back with two straight wins to take the 2010 conference title.

Flipping the page on Fordham, La Salle (3-34, 0-12 A-10) is the cellar dweller of the conference and will play two on Sunday in Amherst.

The Explorers recently split a doubleheader against Bucknell, however before that, their latest win was on March 8, a 1-0 win over Bryant.

As a team, La Salle is batting a combined .192 average while allowing their opponents to hit .332 against them.

UMass has never lost to La Salle, dominating the all-time matchup at 33-0.

Pete Vasquez can be reached at pvasquez@student.umass.edu.

MAXWELL SPARK-COLLEGIAN

Senior midfielder Steve Zorkers looks to get open in a game earlier this season at Garber Field. Zorkers and six other teammates will be honored prior to Friday's game against Delaware.

Seniors to be honored Friday

SENIORS from page 8

a team captain and resident of Princeton, N.J., has appeared in 53 games, starting 15 of them, and provides constant hustle and determination on the field.

Tripucka, has been one of the anchors of the defensive unit this year, starting 17 of 43 games during his career. The Boonton Township, N.J. native was also a long-snapper for the football team in the fall. Walkowiak transferred to UMass from Queens University for his junior and senior seasons. Midway through his junior season, the Salem, Mass. resident changed positions from a goalie to a defensive midfielder and has appeared in 11 games as a Minuteman.

Zorkers rounds out the senior class. A Quincy, Mass. native, the midfielder has played in 54 games and started all 15 contests in his sophomore season.

The seniors have experienced a rollercoaster ride during their careers. Over the past four years, UMass has a 30-25 record, including an Eastern College Athletic Conference title in 2009, triumphing over Rutgers, 11-10, in overtime to qualify for the NCAA tournament. The conference title was one year removed from the team's 5-9 campaign in 2008, when the seniors were freshmen.

Cannella believes that Senior Night allows him to reflect on the time spent and bonds formed with his graduating players, calling it a "rewarding feeling."

"These guys are like your kids for four years," said Cannella. "You watch them grow up from 18 to 22 years old … and now they're men and they're ready to move on with their lives. It's an incredible feeling. When you step back and think about that, the effect that you've had on each other … it's really why you're in coaching."

Friday's game will be played under the lights, marking the first night game at Garber Field since April 9, 2004 when UMass topped Manhattan, 16-4. The later start figures to draw a greater turnout from students as opposed to the team's typical Saturday afternoon affairs.

Cannella believes the atmosphere will create additional intensity for both sides in what is sure to be a competitive game.

"I think the lights will bring both teams fired up," said Cannella. "It adds a lot of juice to [the game], but [I] hope that our guys can handle that and stay composed."

Stephen Sellner can be reached at ssellner@student.umass.edu.

PARKING SERVICES

FINAL EXAM PARKING

May 5, 2011 - May 12, 2011

Anyone who holds a current year long parking permit may park in any **Green Lot (25, 26 and 33), Purple Lot (22, 44 and 49)** or **Yellow Lot (11, 12 and 13)** during exam time only.

Anyone who does not hold a current year long parking permit may park in any **Yellow Lot (11, 12 and 13)** during exam time only at no charge.

GREEN LOTS 27 AND 34 ARE NOT AVAILABLE TO PARK IN UNLESS YOU HOLD A PERMIT FOR THAT SPECIFIC LOT.

Seniors praised for leadership

By Stephen Sellner
Collegian Staff

Friday's clash with Delaware will be more than just another game on the schedule for the No. 10 Massachusetts men's lacrosse team. It's more than the final regular season game or the conclusion of the Colonial Athletic Association regular season schedule.

It's Senior Night.

The Minutemen and their fans will pay tribute to seniors Ryan Hantverk, Brett Newgaard, Kyle Rahn, Travis Tripucka, Mael Walkowiak, Mike Wilus and Stephen Zotkers for their commitment and contributions made to the program prior to the team's 7 p.m. faceoff at Garber Field.

UMass coach Greg Cannella believes that the class' legacy goes beyond the stat sheet.

"They've done a lot more in terms of leadership then they have in what you see out there on the field," said Cannella, who emphasized the importance of the seniors' positive effect on the team both in the locker room and out on the field.

The class of 2011 includes a pair of players on the offensive end. Hantverk, a team captain from East Rockaway, N.Y., has played in 53 games, starting 33 of them and has tallied 39 goals and 21 assists during his tenure. Wilus, a North Wales, Penn. resident has seen action in 33 games during his career and scored three goals during his tenure at UMass.

The majority of the senior class operates in the defensive end. Newgaard, a Sterling, Va. resident, has played in 30 games for the Minutemen. Rahn, also

See SENIORS on page 7

Kyle Smith, Ryan Hantverk and Will Manny run off the field in a game earlier this season. Hantverk and other seniors will be honored before Friday's game against the visiting Blue Hens.

Hayley Smith and the Minutewomen take on the Dukes in the first round of the A-10 tournament.

UMass begin journey for 3rd-straight title

By Jackson Alexander
Collegian Staff

On Friday, the No. 13 Massachusetts women's lacrosse team will begin their bid for a third-straight Atlantic 10 title when they take on Duquesne.

The top-seeded Minutewomen (14-2, 7-0 A-10) will face the fourth-seeded Dukes (11-6, 4-3 A-10) in a semi-final matchup at Temple University.

UMass is fresh off of their 18-4 win over St. Joseph's in which they finished off a perfect 7-0 season in A-10 regular season play. The win marked the first time the team had gone undefeated in their 12 years in the conference.

To keep their seven-game winning streak alive, UMass head coach Angela McMahon said her team must take care of the ball versus a pesky Duquesne team.

"I think the more time we have possession in the game, the better opportunities we'll get to score and essentially win the game," said McMahon.

Another key to the game will be containing the Dukes' offensive leader, Katie Rekart.

"We need to put pressure on her," said McMahon. "She's a great player, she's probably going to have a few goals, but if we can limit those shots and opportunities, hopefully we'll get the ball back before they settle in on offense."

Rekart, a senior from Ellicott City, Md., leads her team in goals (46 goals), and assists (13), with her 59 points ranking just behind Richmond's Mary Flowers (60) for most in the conference.

However, Rekart is not Duquesne's lone scoring option. Meredith Dunn (42 goals, seven assists) and Haley Marafioti (37 goals, nine assists) are both lethal in Dukes' offensive attack.

With UMass' electric attacking duo of Katie Ferris and Jackie Lyons, combined with the Dukes' trio of Rekart, Dunn and Marafioti, scoring opportunities should be plenty throughout the contest.

McMahon also spoke of the battle between Massachusetts' goalie Katie Florence and Duquesne's netminder Liz Walker.

"Goalie play can create so much momentum for a team and when a goalie is playing well and making huge stops it really energizes the whole team," said McMahon. "I expect both goalies to have good performances."

A "good performance" would be nothing out of the ordinary for both netminders.

Florence leads the A-10 in goals against average (8.33) and save percentage (48.7).

The only player even close to Florence's numbers is Walker, who ranks just behind her in goals against average (8.60), and save percentage (45.8).

UMass also has a convincing 13-6 win over the Dukes early in the season to hang their hats on.

Meanwhile, multiple Minutewomen were honored this week for their outstanding performances on and off the field.

Lyons was named the A-10 Offensive Player of the Year for the second straight season and Ferris took home Rookie of the Year honors. Florence was named the Defensive Player of the Year, while the Student-Athlete of the Year award went to junior defender Riley Perry and McMahon won the Coach of the Year.

These numerous accolades summarize what a special year 2011 has been for the Minutewomen.

Despite the success, McMahon knows that plenty of work is yet to be done. But with upperclassmen like Lyons, Perry and Florence leading the way, the team hopes to generate wins in the A-10 tournament while heading back to the NCAA tournament.

"Having that experience with two A-10 championships in the past two years is really going to help us, and I think the upperclassmen will help the freshmen understand what it's like to be on a bigger stage," said McMahon.

Game in and game out, the Minutewomen have proved that they are the most dominant team in the A-10. Yet McMahon still says her team is playing to prove something on Friday.

"The girls are looking forward to showing what UMass lacrosse is all about," said McMahon.

Jackson Alexander can be reached at jtalexan@student.umass.edu.

Jackie Lyons scores a goal in a victory over UNH at the beginning of this season. Lyons and the Minutewomen take on the Dukes for the second time this year on Friday.

UM hosts Blue Hens in final CAA contest

By Herb Scribner
Collegian Staff

Friday night's affair with Delaware will pit the No. 20 Massachusetts men's lacrosse team against a similar Colonial Athletic Association squad under the lights at Garber Field.

The Minutemen (8-4, 3-2 CAA) will host the Blue Hens (9-5, 4-1 CAA) in the final contest of the regular season for both sides. UMass, which has already qualified for the CAA tournament, will look to use this game to raise its position in the postseason table as the playoffs near.

The highest UMass can finish is in second place, getting help with a win over the Blue Hens and a victory from Penn State over Hofstra on Saturday. However, the Minutemen would have to outscore Delaware by 11 goals or score 23 more goals than the Pride to earn the two seed.

A loss to Blue Hens and victories by Hofstra or PSU would give the Minutemen the fourth seed.

"We have to just focus on Delaware and we'll move on from there," said UMass coach Greg Cannella. "We're in, but we have to focus on this game tomorrow night. It's a big game for us and obviously a big game for them. We've both come off of pretty good butt-kicking's. Both teams will want to get back on track before we start the CAA tournament."

The Blue Hens enter Garber Field with a group of double-digit goal scorers in Eric Smith (19), Grant Kaleikau (12), Sean Finegan (17), Nick Elsmo (13), Nick Diachenko (14) and John Mills (11). These offensive players tend to work off of the transition game, something that Cannella is well aware of.

"It's tough," said Cannella. "Those guys are good. We're going try to do our best to limit those guys. They're particularly dangerous in transition. Again, this is another team that can put six guys out there that can really bring it at once so it's going be tough."

More than just a goal scorer, Kaleikau has been dishing out top assists for the Blue Hens throughout the season as he currently sits in second place in the CAA jn assists per game with 1.67 (one spot above UMass sophomore Will Manny).

"He's a good player," said Cannella. "[He's] quick, [and] was dangerous last year against us, very quick, will handle the ball behind [the net], he can score it, [and] he can feed it. We're going have to clamp down on him and do our best. Guys like that and teams like this, you plan on limiting them. You can't think you're going stop them."

In last season's game between the two sides, Kaleikau dished out two assists in the Blue Hens' 9-6 victory. Although Kaleikau also lost the ball four times off of turnovers, the Blue Hens caused more turnovers than the Maroon and White (13-6).

This season, the two sides are close in caused turnover standings, as the Blue Hens lead the conference with 9.29 caused turnovers a game and the Minutemen right behind them with 8.75.

Cannella is prepared for a heavy amount of pressure though, being the side suffered in turnovers against Hofstra.

"Coming off our Hofstra loss, we turned the ball over a ton," said Cannella. "It's just about composure and playing the way that we feel we can play, but…it's a good defensive group."

A big similarity between the team comes in game-winning goals. Two straight games this season – versus Towson and Drexel – the Minutemen earned victories off late overtime goals by Kyle Smith.

Delaware's Eric Smith is tied for first in the CAA for game-winning goals with four, and Diachenko is tied for fourth along with Minutemen scorers Manny, Anthony Biscardi and Smith with two goals.

"You just go out and play," said Cannella. "It comes down to getting a good break or getting a ground ball or winning a faceoff or making a save or making a stop. That's what it comes down to."

With this being the final game of the regular season, Cannella has had the chance to reflect on how his team has done. One of the expectations he set in the beginning of the 2011 season was for his seniors to step up and become leaders, something which he said has happened.

"They've done a good job with that, so it's been an enjoyable group to be around because they believe in what we believe as coaches," said Cannella.

Friday night's game is also Senior Night for the Minutemen, and will begin at 7 p.m. under the lights at Garber Field.

Herb Scribner can be reached at hscribne@student.umass.edu.

OSAMA BIN LADEN DEAD

By Rick Montgomery and Scott Canon
McClatchy Newspapers

The tall, lean, rich man's son could have spent his life lounging about Saudi Arabia in luxury. Instead, Osama bin Laden chose to kill.

As a young man, he shot at Soviet invaders in Afghanistan. In middle age, he turned his wrath and far-reaching resources against the United States - the superpower he saw as spoiler of his homeland's sacred cities.

By the time of his death, his was the face of terrorism.

President Barack Obama announced from the White House late Sunday that bin Laden had been killed by a special operation in Pakistan. His body is in the custody of U.S. officials.

In the mind of the American public, bin Laden was often seen as the person whose sinister creativity resulted in atrocities committed in the name of Islamic fanaticism. In truth, experts said he served more as idol and motivator to militant Muslims who were convinced that America's support of Israel and its presence in Saudi Arabia – home to the holy places of Medina and Mecca – demanded bloodshed.

Bin Laden's charismatic ways, his fortune and his ability to extract money from other wealthy Islamic extremists gave sophistication and firepower to a terrorism campaign that had been lurching from one haphazard car bombing to the next.

Without bin Laden, the terrorist hijackers may well have stayed home to wage their protests, never to imagine unleashing attacks in the United States.

"I was the most optimistic" that destruction and death at the World Trade Center would be massive, bin Laden declared with characteristic hubris in a videotape.

Once seen by Washington as a freedom fighter, bin Laden launched the militant organization al-Qaida during the Soviet Union's invasion of Afghanistan. Over the years, al-Qaida provided training to as many as 11,000 men who passed through its terrorist camps in Afghanistan. Al-Qaida is now thought to have secret soldiers in four dozen countries.

Federal authorities have implicated bin Laden in some of the bloodiest crimes of the past decades. The 1993 bombing of the World Trade Center, the 1998 bombings of U.S. embassies in Tanzania and Kenya, the 2000 bombing of the USS Cole in Yemen, to name a few.

As for the Sept. 11, 2001, atrocities, the terrorist leader made clear his satisfaction, if not his responsibility.

He boasted with a grin: "We calculated in advance the number of ... enemy who would be killed."

He was born Osama bin Muhammad bin Awad bin Laden in Jiddah, Saudi Arabia. Most accounts placed his birth in 1957, although he suggested different years to different interviewers.

He reportedly was the 17th of Muhammad bin Laden's 50-plus children. He was also said to be his Syrian mother's only child, an indication she was among the patriarch's least-favored wives.

Muhammad bin Laden was illiterate when he emigrated on foot from his homeland of Yemen to Saudi Arabia. Once there, he slowly cobbled together a construction business that, with the eventual help of his sons, grew to a $5 billion enterprise.

Osama bin Laden's early years were comfortable – a far cry from the angry lives of many young radicals whom his terrorist camps later trained. A devout Sunni Muslim, he attended Saudi Arabian schools and studied economics and management in college.

His family's business won important contracts to rebuild mosques. But being a younger son, bin Laden did not figure prominently in the family hierarchy or its decision-making.

The 1979 Soviet invasion of Afghanistan upended what could have been a life of ease for the man in his early 20s.

Galvanized by what he saw as an epic battle between Muslims and godless communists, he joined the Afghan resistance. He is thought to have used some of his family's wealth to import weapons and to recruit Muslims from Egypt, Turkey, Lebanon – in time, even the United States.

His fighters were backed by American and Saudi tax dollars and advised by the U.S. Central Intelligence Agency.

By the mid-1980s, the guerrilla commander had bonded with the Egyptian Islamic Jihad, a terrorist group that helped to assassinate President Anwar Sadat. One of its key leaders, Ayman al-Zawahri, would have a strong influence and eventually be a brother-in-arms.

In the late 1980s, bin Laden began to tell followers of a vision that had come to him of a global jihad to be waged by Muslims around the world.

So evolved al-Qaida, Arabic for "the base."

After the Soviet withdrawal from Afghanistan in 1989, bin Laden returned to Saudi Arabia a hero, working briefly in the family business. A sought-after speaker, he also released a quarter-million cassette tapes that outlined a new enemy in his sights. "When we buy American goods," he said in one tape, "we are accomplices in the murder of Palestinians. ... The United States uses that money to send a billion (dollars) a year to Israel."

His anti-Western rhetoric intensified in 1990, when Saudi rulers allowed American military personnel to use the birthplace of Islam as a staging ground for the Gulf War. Bin Laden cast it as a desecration of a holy site. He accused the Saudi royal family of being as vile as the Americans.

MCT

Al Qaeda ringleader Osama bin Laden was killed by American forces in Abbottabad, Pakistan Sunday, President Barack Obama announced.

His radical reading of Quran scripture called for violence to eradicate from Islam all traces of secular culture – from pop music to modern fashions to U.S. soldiers.

Saudi Arabia expelled bin Laden in 1991 because of his anti-government activities. He wound up in Sudan, which expelled him in 1996 under pressure from American and Saudi diplomats.

By this time, American interests were being targeted by al Qaida, composed largely of Afghan war veterans. Bin Laden personally claimed responsibility for the deaths of 18 American soldiers associated with the 1993 downing of a U.S. Army helicopter in Somalia.

That same year, a truck bomb exploded in an underground garage of the World Trade Center. Investigators linked bin Laden to a loose organization of Islamic extremists recruiting terrorists in the United States.

What ostensibly had begun as a battle to liberate Islam's three holiest places – Mecca, Medina and Jerusalem – would soon become a holy war, a jihad, against the United States.

Students react to news of bin Laden's death

By William Perkins
Collegian Staff

University of Massachusetts students descended upon an area situated near the Berkshire Dining Commons in Southwest late last night to mark the news of the death of Osama bin Laden with a large impromptu demonstration.

The crowd, which was composed of at least 1,000 people, was vocal at times – with some students chanting and cheering. Members of the University of Massachusetts Police Department gathered at the scene in riot gear, trying to disperse participants and onlookers.

Several students at the scene said they gathered to mark the occasion.

"I'm glad Osama's dead," said James Wagner, a student who was waving an American flag in the crowd.

Devin Mallios, also in attendance, said he gathered "because Osama's dead and we have to celebrate it."

"This is our last week before finals, so we have to go hard," Mallios added of the crowd's sentiment.

Luke Arno, also a UMass student, said he showed up to the scene to "celebrate our commitment to our country."

"We said we were going to do something, and we did," said Arno, who noted that bin Laden's death does not make him happy, because there are still many al-Qaeda members out there.

UMass student Tyler Kowalski credited the gathering to what he considered to be the lack of parties over the weekend.

"This weekend was pretty bad," said Kowalski. "[It was] like a letdown, so I feel like everyone's trying to party."

Members of the crowd could be heard singing along to "The Star Spangled Banner" and "God Bless America." They also could be heard chanting "U.S.A."

Additionally, some members of the crowd set off fireworks, while others wrapped trees in the area with toilet paper. And at least two students gathered on the roof of the Berkshire Dining Commons during the demonstration.

UMPD officers arrived on the scene and tried to diffuse the crowd. One officer, dressed in riot gear, could be heard saying to those who gathered: "It's really time to go home."

When reached for comment early this morning, Steve Menard, a UMPD dispatcher, said he couldn't discuss the matter further.

"We don't have any comment on it now," he said. "We're really busy."

William Perkins can be reached at wperkins@student.umass.edu.

Over a thousand students gathered outside of Berkshire Dining Commons in the Southwest Courtyard upon hearing news of Osama bin Laden's death Sunday evening.

'Framework for Excellence' to improve UM campus layout

By Michael Wood
Collegian Staff

In just over a week, more than 4,000 seniors will graduate from the University of Massachusetts, according to University Relations. But if they return to visit their alma mater within the next few decades, they could find a drastically different campus than the one they left.

UMass is in the midst of developing a Framework Plan that could reshape the campus in a way never before seen in University history. As many as 14 new buildings could line Massachusetts Avenue from the Army ROTC building to the Newman Center, North Pleasant Street could be converted to a pedestrian highway and as many as three more parking garages could be constructed in the next 10 to 15 years.

"Those sites are all areas of campus that represent a lot of potential for expansion," said Dennis Swinford, director of campus planning. "But it is just a plan. We look at it as a place where we could potentially expand, should we decide to. All these sites represent what could happen, not what will."

Since Chancellor Robert Holub took office in 2008, the University has embraced a new planning initiative to update the 1993-2007 campus master plan and streamline the campus itself. Holub's "Framework for Excellence" aims to improve UMass' reputation and physical appearance and simultaneously create a realistic spending plan the school should be able to follow.

"When you have a good plan in place, you can spend your money much more wisely," Senior Physical Planner Niels la Cour said. "It's an important time to be careful with the money we spend so that every dollar we spend moves us in the right direction in connection with our plan. Whatever we do, we want to make sure we're moving the ball forward."

The University's Framework Plan will be meant to reflect the most ideal spots for development, then, the Master Plan will follow up on those recommendations with a solidified proposal for the next 10-40 years of campus development.

So, why now? What's so important about making sure UMass gets it right this time around?

"In the past, we've been good at building buildings, but not at building a campus," Swinford explained. "We're trying to change that now."

In the 1970s, campus developers explained, UMass was considered an aesthetically appealing spot. The University underwent the biggest construction period of its history from about 1960-1975, according to the University's archives. The campus exploded with construction when the Campus Center, the W.E.B. Dubois Library, Worcester and Franklin Dining Commons, McGuirk Alumni Stadium and the Fine Arts Center were built, and residential areas were also added (Southwest and Sylvan) to house a burgeoning enrollment. UMass was growing, and it was cutting-edge for its time.

Since then, though, the campus has lost its glistening shimmer. Labs like Hasbrouck and Machmer are leaky and outdated, lecture halls in Thompson and Bartlett are cramped and some, like Hills, are condemned. The grounds of the flagship campus of one of the biggest public universities in the nation are in need of a facelift.

"The Campus Center is an ugly building no matter how you look at it," la Cour laughed, adding that there are a number of buildings on campus and elements of the campus' layout that don't make much sense logistically or aesthetically. That's because the old master plan wasn't as comprehensive as it should have been, he said. Now, 20 years later, members of the UMass community are left wondering what architectural teams were thinking when they constructed buildings like the Fine Arts Center, Campus Center or Morrill Science Center.

Senior Cynthia Lynch said that if the University were to construct a pedestrian bridge over the campus pond, it would cut down students' walking time significantly, allowing them to cut across the center of campus to get to the library or dorms rather than having to walk all the way around it.

Swinford and la Cour agreed with her sentiment and said they are considering constructing such a bridge. Both say there are a number of areas on campus, like the pond and surrounding green space, that could easily be improved and have a dramatic effect on logistics and aesthetics. UMass, they say, is somewhat of "a campus of lost opportunities," that, if corrected, could become facets that attract students, rather than driving them away.

"There are other large flagship state institutions that, I would say, are more coherent," Swinford said. "There have been opportunities lost by the way the campus has been developed [in the past]."

Campus planners have made the beautification of campus their top priority. One of the biggest issues facing UMass, they say, is that the University isn't "pretty enough" to attract top students lured by more conventionally beautiful schools. "Most students decide if they're going to attend a university within 15-20 seconds of stepping foot on campus," said la Cour. "If we only have 15 seconds, we want to make a good impression, and when we talk about that, one of the ways we can do that is improving how campus looks."

The Framework Plan describes several ways campus planning envisions beautifying the campus, the first of which is the removal of surface parking. With large parking lots dominating much of the landscape around the residential areas, the Mullins Center and the Visitors' Center, there is a huge loss of green space students could potentially use for recreation or organization. By removing most of these lots and constructing parking

Town Meeting begins Mon.

By William Perkins
Collegian Staff

A proposition that would allow the town manager to commence negotiations which could lead to the creation of a solar panel site at an old landfill on in town. A zoning bylaw change that would allow residents to keep up to 12 domesticated fowl or rabbits on their property. And an operating budget of about $64 million.

Those are a few of the several items that are slated to be taken up at this year's annual Town Meeting in Amherst. The meeting, which begins tonight, features a 35-article warrant that's expected to generate enough discussion to have residents and officials meeting a few times over the course of the upcoming weeks.

On the docket at this year's meeting is a proposal that, if passed, would allow Town Manager John Musante to negotiate a contract for up to 30 years with an entity that would provide for a solar power harnessing facility at the site of an out-of-service landfill along Belchertown Road. The town has already begun discussions with BlueWave Capital, a Boston-based project development company, to implement the proposal, which calls for the creation of 4.75-megawatt-generating solar photovoltaic site.

"What this article does is it allows [the town manager] to enter into various contracts to move forward," Amherst Select Board Chairwoman Stephanie O'Keeffe said in an interview last week.

"State law allows the town manager ... to enter into a contract up to three years," continued O'Keeffe. "He cannot enter into any contract that's beyond three years without Town Meeting's permission. Because the contract length that he wants to enter into is beyond three years, he needs Town Meeting's approval."

The proposal has received some criticism from residents that live near the proposed site, who have expressed apprehension about the stability of a cap on the old landfill which hasn't been operating for almost 30 years. However, O'Keeffe noted that a Town Meeting nod of approval just allows for the development process to move forward.

"They're not approving the contract, and they're not approving the plan," O'Keeffe said of the article going before those at Town Meeting. "This is about moving the process forward."

"Approving this is not a done deal, it is just a step in so many steps that need to happen before there's actually a signed contract or before there's a project going forward," O'Keeffe added.

Members of the Select Board unanimously voted to recommend the article at their meeting last Monday. But, before doing so, they heard from concerned residents who suggested that the article be tabled, and not go forward in its current form at the time.

It was also reported at last week's meeting that the state's Department of Environmental Protection and the town's Zoning Board may also have to give the proposed project the

See TOWN MEETING on page 3

Bin Laden killed in Pakistan

BIN LADEN from page 1

their money wherever they find it," bin Laden wrote in his 1998 fatwa, or holy decree. He accused Americans of waging war on God.

The terrorist leader once compared jihad against the Western world to the Afghans' successful stand against the Soviets.

"The flag of the Soviet Union was folded once and for all" because of the Muslim resistance, bin Laden said. "It was thrown in the wastebasket.

"We are certain that we shall, with the grace of Allah, prevail over the Americans and over the Jews."

Analysts concluded bin Laden was less the chief executive of a single organization than an idea man, the coordinator of a diffuse movement.

However scattered, the operation was high-tech and elusive. Al-Qaida embedded coded messages in innocuous-looking Web sites, stored bomb recipes on CD-ROMs. Bin Laden used couriers to communicate with his agents face to face. His plotters rarely gave themselves away.

He became the international poster boy of terror when American authorities accused the gaunt, 150-pound man in the 1998 bombings of two U.S. embassies in Africa, in which more than 250 persons died.

In 2000, a bomb-laden suicide boat bobbing in a Yemeni harbor blew a hole in the USS Cole, killing 17 American sailors. The plot had bin Laden's fingerprints all over it, authorities said.

The Sept. 11, 2001 onslaught on America came three years after bin Laden warned of a "black day for Americans ... when we do not differentiate between the military and civilians."

With a $25 million bounty on his head and worldwide pressure on Islamic nations to root him out, once-friendly Pakistan, Yemen and Iran turned their backs. Only Afghanistan's ruling Taliban offered safe haven, as it had since 1996.

Most of the Arab world remained calm amid U.S. military strikes on Afghanistan. Even the most radical Muslim groups backed off their cheerleading for bin Laden, figuring his once-heroic stature was crumbling.

"The vast, vast majority of Muslims in the Middle East find him to be a despicable character," said Wake Forest University religion department chairman Charles Kimball, shortly after the terrorist strikes.

Meeting will address landfill plan, chicken bylaw this month

TOWN MEETING from page 2

go-ahead before it moves forward.

In addition to the proposed solar project, those at Town Meeting will also take up a zoning article that would expand the areas in town where residents would be allowed to keep up to 12 fowl — chickens, hens, pigeons, ducks — and rabbits on their property. The article, which was submitted by petition by resident John Gerber — a professor of Plant, Soils and Insect Sciences at the University of Massachusetts — and others has received support from the Select Board and most of the town's Planning Board.

The article also calls for having those who possess any of the outlined animals to register them with the Amherst Health Department, and to allow for the town's Animal Welfare Officer to inspect them.

Additionally, two subsequent articles outline the regulations that go with the change — and make amendments to the town's Animal Welfare Bylaw. The only difference between the articles is that one allows neighbors of those who intend to possess the animals to participate in their process of attaining them, while the other doesn't.

Elsewhere, voting attendees of the meeting will also be asked to approve a roughly $64.1 million town budget for FY12. The budget accounts for the town, school and library appropriations, and is at the full levy capacity that the town can tax at.

Other articles that will be taken up will also deal with changing the amount of parking spaces allowed at residences in town, amending a portion of the town's wetlands protection bylaw and authorizing several right-of-ways and easements.

There are roughly 250 Town Meeting members, most of whom are elected to vote at the meetings by residents of their voting precinct in town. Members of some of the town's governing bodies are also considered ex-officio members, and also have voting rights.

Town Meeting members typically take up the warrants over several nights. O'Keeffe is projecting that members will get through the warrants in six nights.

The meeting commences tonight at 7:30 p.m. in the Amherst Regional High School auditorium. Members of the public who do not have voting rights can still attend the meeting.

William Perkins can be reached at wperkins@student.umass.edu.

Master Plan to redefine campus aesthetics, generate green space

MASTER PLAN from page 1

garages at strategic locations around campus, UMass could regain precious space on campus that hasn't been available for decades.

As far as new construction goes, there are plans in place for a new journalism and linguistics building, as well as a six-building Commonwealth Honors College complex and potentially a new admissions building. The former will be L-shaped and will sit behind Hasbrouck, between the campus pond and Campus Center. The Honors complex will sit between the Recreation Center and Boyden Gym once the parking lot and tennis courts there are removed. The Admissions building doesn't have a designated location yet, but planners would like to see it move back onto campus from its current location on Mather Drive. Each could improve campus logistics and the construction of new state-of-the-art buildings could be a draw for new students.

"We need more 'wow' factors on campus that we just don't have right now," added Swinford. "We want people to get excited about how UMass looks."

What would happen to campus if concrete and metal vehicle barriers were replaced with trees and shrubbery? Swinford and la Cour believe removing manmade structures like those barriers, and swapping them with trees, shrubs or flower beds is another way to get rid of UMass' "concrete jungle" ambiance. Planners hope to create such ways, factors by adding pedestrian sidewalks and additional green spaces, as well as rerouting high traffic areas around campus.

Once the framework Plan is finished, the campus could undergo enormous changes and expansion as the University attempts to address its withering infrastructure, crumbling walkways and surface imperfections, and reestablish itself as one of the premiere research institutions in the country.

"[Campus planning] is here to support what [students and faculty] are doing," Swinford said. "It's our job to support that, and that's one of the reasons we're looking very hard at planning out the next campus expansion this time around."

It hasn't been done this way in a long time," he went on. "In fact, this type of open, transparent and conclusive process may be the first time this has been done to this extent. [The] campus looks and operates the way it does for a reason, and now it needs to be addressed again."

I ♥ the DC
VIDEO CONTEST
$200 cash prize for the winning video!
• Winning video to be posted on the front page of UMassDining.com and UMass Dining Facebook page
• Must be submitted by May 13th at 5:00pm
• Entries should include: Name, e-mail address, cell number
VIDEO REQUIREMENTS:
• 1-2 minutes in length
• Creative, informative and exciting
• Original
• Must explain why you love the Dining Commons
Ok future movie directors, here's your chance to tell us why you love the Dining Commons. Submit a video that tells us your story.
ENTRIES SHOULD BE SENT TO:
Christopher Howland
669 North Pleasant Street · Amherst, MA 01003
UMASS DINING UMassAmherst
umassdining.com
facebook.com/UMassDining
Videos submitted become the property of UMass Dining Services. By Submitting a video in this contest the entrant consents to its use in any and all marketing campaigns by UMass Dining

CALLING ALL SENIORS
Please join us for a group photo and a special gift from UMass Dining.
Thank you for dining with us and we wish you all the best in the future.
BERKSHIRE DC, HAMPSHIRE DC AND WORCESTER DC WILL REMAIN OPEN JUST FOR YOU FRIDAY, MAY 13, SATURDAY, MAY 14 AND SUNDAY, MAY 15.
MEET AT THE CASHIER STATION AT THE BBQ

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

MONDAY, MAY 2, 2011

"I think we may have finally have killed Osama Bin Laden," Alli Sheridan

EDITORIAL@DAILYCOLLEGIAN.COM

Schrödinger's column

I wrote a senior column, now you are reading it.

This is where I present to you the wisdom I accumulated over my four years at UMass Amherst.

Eli Gottlieb

Soundness equals preservation plus progress.

A well-typed program does not go wrong.

If an expression has a type and can be evaluated a further step, that further-evaluated step must have the same type.

If an expression has a type, it must either be a fixed-point syntactic value or have a further step of evaluation it can undergo. As Professor Yannis Smaragdakis puts it, "No idea is too obvious or dreary, if appropriately expressed in type theory. It's a research advance that no one understands, but they are all too impressed to be leery."

By God, if there's one thing writing a Capstone in research-level programming-languages has taught me, it's to heed that thesis. The research community loves nothing more than to prove sophisticated theorems nobody else cares about; so always make sure to think about the practical applicability of your work to the real world. Otherwise you too may wind up stuck on the Wheel of Academic Samsara, publishing papers for their rigor and novelty rather than for having accomplished anything you can grant to the world.

Disregard Tribbles, acquire honor. They may be fuzzy and cute, and they may purr like oblate spheroidal kittens, but those little scumbags will eat up every last molecule of food, dust, and even carpeting in your entire damn ship. In that, they're exactly like kittens. Stay your hand from petting them and continue on the path of the mighty Klingon warrior. While everyone else stands around like a damn fool, open the battle by massacring the Federation troops. The UMass Enterprise shall burn in the fires of the Children of Keldes, and your name shall live for forever and eternity!

Who is wise? He who learns from all men.

Why is this night different from all other nights? Because on this night someone actually showed up to the Reform-Jewish services at Hillel.

Why did the chicken cross the road? To get to the other side… of the gates of Heaven.

Why does Commonwealth Honors College have so many bizarre, needless requirements?

Just who the hell do you think I am? I am not my brother.

You mad, bro? You deserve to be mad. You're mad as hell, and you're not going to take it anymore. After all, all this wasted column space uses up a small but significant quantity of negentropy that's now gone forever. The universe will die its slow, painful heat-death slightly faster.

There's a rumor going around that the Morning Wood has covered up a story for Chancellor Holub, so you should investigate that, too, by emailing this columnist. While it has absolutely nothing to do with the man who materialized a blue police box at the British Royal Wedding or the fact that silence will fall, it remains of vital interest to the UMass community, especially those who have made the Contract to become Members of Commonwealth Honors College. They need to be told.

Your thesis is the thesis that's going pierce the heavens!

If there's a wall in our way, we'll smash it down.

If there isn't a path, we'll carve one ourselves.

The magma of our experimental apparatus burns with a mighty flame. Go get the fire extinguisher! You've done it; that behemoth project belongs to you now, so what are you waiting for?

Get going, blood brother. And never forget: just believe in yourself. Not in the you who believes in me. Not in the me who believes in you.

Eli Gottlieb is a Collegian columnist. He can be reached at egottlie@student.umass.edu.

All while wielding a pen

All my life, writing has been a source of strength, creativity, and self advancement. The act of taking isolated thoughts out of the ether and sending their messages through a series of lines, curves and symbols is absurd when you get down to it. And this exhausting and, at times, painful process has been my lifeblood ever since I tried to write a novel in the fourth grade.

Mike Fox

I started writing at the Collegian out of a frustration with one of my other long-term commitments: the Student Government Association. I was rejected from filling a vacancy in it so I marched straight down to our office in the Campus Center basement and demanded to cover the SGA.

Over the past four years, I have found that my writing is often wielded as a weapon or tool that ultimately helps shape the issues and overall perceptions of the SGA. I came to view myself as both the chronicler and critic.

Investigations surrounding embezzled funds, features on the advantages of online voting, and weekly updates – most written an hour past my deadline – helped me feel like a real political journalist and an integral part of student politics.

It takes a fool to think a two-to-three minute speech, much less a 750 word column, can fully encapsulate these past four years.

My time in Argentina was another formidable college experience that writing for the Collegian helped me through. I loved the opportunity to write detailed and introspective accounts of the exotic locations throughout South America I visited. It also allowed for some of the best excuses for missing a deadline: "I'm sorry this is late, a jungle monsoon knocked out power at my hostel, I'm also sorry if this is difficult to edit, I'm writing on a Portuguese keyboard in Microsoft Word in Spanish." Needless to say, people didn't enjoy editing that Global Perspectives submission.

But more importantly, the weekly Global Perspectives columns forced me to confront the enormous changes I was feeling due to the experiences I was having – the entire school willingly read my confession and journal about Argentina every two weeks.

In general, UMass has been somewhere where I have been free to pursue whatever ambitions and passions I have desired, and all in the safety of a bubble of college experimentation. I haven't done everything I could do, but I have done everything I wanted.

Were the past four years perfect? Hell no! Were they what I needed? Hell yes!

On that note, chase every dream you can in Amherst. You will find an incredible amount of success and be truly ready to transpose your pursuit of excellence from UMass to the real world; I already feel it happening now.

It takes a fool to think a two-to-three minute speech, much less a 750 word column, can fully encapsulate these past four years. Instead, I find it better to internalize what has happened and realize it never ends. Every experience stays with you forever by altering – sometimes imperceptibly – your worldview. I'd rather focus on how I will change in order to reflect on what has happened than really attempt to explain it all. Granted, writing is the best way I can come close to expressing everything for you now, because I'm damn sure this would be quite a sloppy speech.

In that case, I'll let Stephen King, one of the first authors that I truly fell in love with, pick up the slack.

"Writing is magic, as much the water of life as any other creative art. The water is free. So drink. Drink and be filled up."

To be honest, I don't need the self-satisfaction anymore of being considered the authoritative voice on what going through UMass means and does to one. There are tens of thousands of stories here, and while I might view my college life as fairly all-encompassing, the only story I can share and really understand is my own. Ask me in a few years if I'm happy, then we'll know if I've understood my story.

Mike Fox was a Collegian columnist. He can be reached at mgfox@student.umass.edu.

Hindsight is 20/20. Who cares?

As I sit here trying to think of some pearls of wisdom to share with my peers who still have a few years left here at UMass, I can't help but remember some of my funniest and most embarrassing memories here at the Zoo. And, as any graduate will tell you, there are a few missed opportunities that spring to mind.

Kate MacDonald

I'm almost embarrassed to admit it, but UMass was my absolute last choice among the colleges I applied to. It took some convincing from my parents, grandparents, alumna aunt and older brother to realize that, in the end, my degree would look the same as any private school degree, but with a much smaller price tag. It was undoubtedly the best choice I've ever made and I've had a pretty great experience – of course, if I could, there are a few things I'd change.

Studying abroad was always something I'd wanted to do, but never found the time for. Experiencing a new culture, meeting new friends and taking classes that I would have never been exposed to would have been unique opportunities, and seeing world-famous sites and possibly learning a new language are laudable pursuits for any college student.

So, take advantage of every opportunity on campus; check out Taste of UMass; investigate all the different foods each DC has to offer; take a class that's outside of your comfort level or campus; join a club.

While you're at it, take my completely unbiased advice and check out the Collegian. I didn't join until the fall of my junior year, which is something I regret. The lessons learned at this independent publication are some of the most important I've learned in my life. Writing for the Collegian will teach you, among other things, to have a thick skin – everyone's a critic – meet deadlines, expand your friend group and learn some cooperative skills.

RSOs, as well, not only open new doors but also look good on resumes. In my case, I came to UMass with every intention of working hard and heading to law school. After becoming a staff writer and the blog editor, I am leaving with a job as the newest arts writer for a large regional newspaper.

While you're at it, take my completely unbiased advice and check out the Collegian.

Oh, and don't write off potential friends for any reason. A few of my closest friends here are people I went to high school with but didn't know that well, and a few more are people from different states, cities and countries. Expand your friend group, but don't leave old ones in the dust either.

Now the most important lesson: do well in school, but don't let other things suffer because of it and vice-versa.

I was told by a friend on the first nice day after the harsh winters we're accustomed to here that I should skip a kinesiology quiz because, "You'll always remember hanging out with your friends, and you'll never remember the info from that class." While that was true, and I do have great memories from that day, the consequences affected my GPA. Eh, not the end of the world.

Along the same line, take a mental health day once in a while. Here's a little-known fact: it may not be completely necessary to go to every scheduled class. Sometimes, watching a USA marathon of "Law and Order: SVU" while lounging in bed, eating Oreos might be more important than another lecture about the philosophy of dead guys.

Everyone has regrets at the end of college, but those are what make the best stories. No one cares about how great you did on that one Greek Civilization test because you read "The Iliad" over the summer. But people will get a kick out of hearing about how you and two of your roommates narrowly avoided the cops by hiding in an undisclosed bathroom after a raging party – just to offer an innocent, hypothetical scenario.

It's easy to let these four years slip by. It's even easier to look back and spend a significant amount of time thinking about things you could've changed. Regrets aren't worth it. It's better to think about the hilarious memories you've made and spend time with the people you've made them with.

Kate MacDonald was the Collegian's blog editor. She can be reached at kaitlynm@student.umass.edu.

Aldean shows fans his kind of party

By Kate MacDonald
Collegian Staff

Country superstar Jason Aldean played his biggest hits to a nearly-packed Mullins Center on Friday night.

The extremely vivacious crowd was made up of young kids, students and parents alike, all of whom cheered for Aldean as well as his openers The JaneDear Girls and Eric Church. All that could be seen all over the arena was flannel, baseball caps and jean shorts (on both girls and guys).

The JaneDear Girls were up first, performing a bevy of songs from their self-titled album, including the well-received "Wildflower." It was Church, however, who was the star of the opening acts.

Based on the number of t-shirts worn bearing his face, there were almost as many fans who came to see Church as there were Aldean fans. Church, decked out in sunglasses, performed a set that was equal parts rock and country. Fan favorites included "Before She Does" and "How 'Bout You." His last tune was "Smoke A Little Smoke," a message which a few fans took to heart, judging by the amount of smoke rising high into the rafters of the Mullins Center.

As the smoke was rising, Church's performance caused leftover confetti from the recent Dayglow concert to begin falling down from the ceiling.

After a short intermission, a projection of Aldean's silhouette was seen on a large gray curtain hanging over the stage. The din coming from the fans was almost as loud as Aldean's set, which, at times, was nearly ear-splitting.

The first song in the set was "Tattoos On This Town." The singing of the crowd during the chorus was almost as audible as the country star's. As the song was playing, various tattoo designs could be seen on the large video screen behind the band, which showed interesting video clips all night long.

The most fascinating visual shown by the screen was during "Don't You Wanna Stay." The tune, a highly-played ballad on the airwaves, is a duet between Aldean and pop star Kelly Clarkson. While Aldean began the song as the solitary singer onstage, Clarkson's accompanying vocals could be heard during the chorus, and she soon appeared on the video screen, belting out her verses in a pre-recorded bit.

Light sections with small fiber optic, colorful screens hung from the ceilings over the band. It was somewhat distracting when each horizontal segment would move around the area over the stage, but they provided good strobe lighting over the massive crowd. They also helped to set the mood during certain songs. For instance, there were yellow lights sweeping the crowd during "Amarillo Sky," and green-colored ones during his hit "Big Green Tractor."

It was the beginning guitar riff of "My Kinda Party," however, that elicited the biggest crowd reaction. Nearly every concert-goer danced and swayed with the music. During the single, Aldean strummed on an acoustic guitar, but, for the electric guitar solo at the end of the song, he showed his mean air guitar skills. Collective laughter could be heard all over the venue.

Those closer to the stage were also entertained throughout the concert by Aldean's drummer, Rich Redmond. Redmond would get really into the music, providing great, solid beats that reverberated through the chests of audience members. He would also, in his excitement, make intense, funny facial expressions. This was especially evident during an amazing drum solo in the middle of the set.

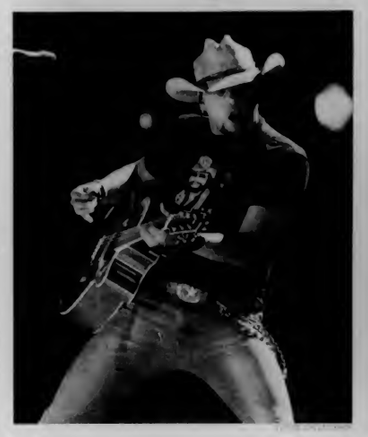
Redmond kept the audience going during the high-octane concert. The guitarists and Aldean got very into each song, culminating in Aldean yelling, "Crank that b**ch up, let's go!" right before "Hicktown," the last song before the encore.

After the encore, Aldean and company played hit single "She's Country," as well as a great cover of Bon Jovi's "Wanted Dead or Alive."

The audience wasn't disappointed in the least during any part of Jason Aldean's concert. From the two opening acts to Aldean's last number, nearly every member of the crowd was on their feet, dancing. Even the slow songs didn't lag in intensity.

It was truly a great way to wrap up the Mullins Center's school-year schedule. Like other country stars who have played in Amherst in the past, hopefully Aldean will make his way back to Amherst in the very near future.

Kate MacDonald can be reached at kaitlynm@student.umass.edu.



Jason Aldean performed his hit songs "Hicktown," "Big Green Tractor," and "She's Country" at the Mullins Center on Friday.

Summer TV saves fans from boredom

By Kate MacDonald
Collegian Staff

The end of the spring can provide an awful, empty feeling for a significant portion of the American population. In this time of season series finales, avid fans lose direction and don't know what to do with themselves.

Such events can leave viewers hanging in the lurch, contemplating horrifying cliffhangers for the next three or four months. Fret not, television addicts of America. This summer, the biggest TV conglomerates will be churning out interesting new shows and wrapping up questions from the last season in returning favorites.

One channel in particular, ABC Family, will be filling the majority of its summer schedule with new shows. Old favorites "Make it or Break it" and "The Secret Life of the American Teenager" have already returned, and "Pretty Little Liars" will soon follow on June 14.

Also beginning on the 14th is the new show "The Nine Lives of Chloe King," about a teenager who develops catlike super abilities. "Switched at Birth," has a self-explanatory name, and concerns two teens who were switched in the hospital as infants finally finding their genetically correct families. The girls get switched back when the show premieres on June 6. Finally, Raven-Symoné makes her small screen return as the title character in "State of Georgia" on June 29.

Fans of shows that have a more mature target audience may enjoy all that TNT has to offer during the warmer months of the year. Their highly acclaimed, female-oriented crime dramas, "Rizzoli and Isles," starring Angie Harmon and Sasha Alexander, and "The Closer," for which Kyra Sedgwick has taken home a Golden Globe and an Emmy, make their return on July 11.

TNT has two new programs to offer for the summer. "Franklin and Bash," starring Mark-Paul Gosselaar and Breckin Meyer, premiering June 1, showcases the lives of two bad boy, bachelor lawyers and what happens when they join a legitimate firm. "Falling Skies" begins on June 19, and, as a science fiction show, is a tad out of the ordinary for the network.

One of TNT's biggest competitors, the USA network, lacks the power to compete in this summer's challenge. The network will be relying on old hits to score on the rating charts. "White Collar" and "Covert Affairs" come back on June 7, while the new season of "Burn Notice" starts June 23 and "Royal Pains" is integrated back into the schedule on June 29.

If you'd rather tune in to reality shows, ABC will be your network this summer. The channel is pursuing a new makeover show (after the massive success of "Extreme Makeover: Home Edition"), called "Extreme Makeover: Weight Loss Edition" earlier in the summer, on May 30. It features eight people who are 200 or more pounds overweight who want to lose at least half of their body weight. A show with a strong resemblance to "The Biggest Loser," the series will be eight episodes long, featuring one subject per episode.

ABC will also feature the seventh season of "The Bachelorette" and a new "Amazing Race"-like show, "Expedition Impossible," which begins June 21. Executive producer Mark Burnett, on the show's official website, calls the reality show, "…an epic Indiana Jones-style experience."

HBO's megahits "True Blood" and "Entourage" also make their way back to the summer schedule on June 26 and July 24, respectively, much to the delight of fans.

Some of the more popular and highest-rated programs on TV are featured on air during the summer. Luckily, from ABC Family to TNT, there's something for all ages and all interests. The new shows and returning favorites will definitely provide some comfort to fans that would have otherwise spent the summer miserable, hoping for some closure from the finales of their year-round favorites.

Kate MacDonald can be reached at kaitlynm@student.umass.edu.

The ABC family series "The Secret Life of the American Teenager" kicks off the return of TV favorites this summer.

'Prom' a trite teen romance

By Ian Opolski
Collegian Staff

In "Prom," class president Nova Prescott (Aimee Teegarden) has worked all year to give the senior class a perfect, unforgettable prom. But when her Starry Night-themed decorations go up in flames and bad-boy Jesse Richter (Thomas McDonell) is conscripted into helping her rebuild, will Nova be robbed of the night she's dreamed of for so long?

"Prom" was produced by Disney, a company famous for creating gritty and visceral portraits of the struggles of human existence, but in terms of reproducing reality, they've really upped their game with this one. Just kidding.

"Prom" is probably being marketed to 11-year-old girls or to the mentally infirm, but even they shouldn't be able to stomach this drivel. The movie presents such a sanitized version of high school that it hurts to watch.

First, there's the school itself. Brookside High School, the film's generically-named setting, contains, by my count, exactly three black people, one Asian, and one stoner. Otherwise, everyone else is a white kid with a really realistic name like Simone or Anton. Everyone hangs out with a small group of friends and doesn't know anything about anyone outside of his circle. After all, in a class of a few hundred students, how are you expected to meet more than six people in four years?

But, as so frequently happens in real life, all of them serendipitously cross paths with their ideal partners two weeks before prom, even though they somehow missed them over the entire course of their academic careers. This is high school as envisioned by children who have yet to go to high school; it's hard to believe an adult wrote this movie.

The presentation of prom is, if possible, even more nauseatingly vanilla. Where are the drunk people? Where is the violent, sweaty grinding on the dance floor? These essential prom elements are nowhere to be found.

Instead there's merely a string of Christmas lights and a fountain, with the couples maintaining an unrealistically respectful distance between their bodies. Plus, no one at this school merely asks someone to the dance with words. Instead they do it with body paint, acrostic poetry and skywriting. If the filmmakers intended these antics to be cute, they failed. They are revolting.

The storylines in this movie are clichéd beyond belief. There is literally not a single glimmer of originality to be found in 103 minutes. Beyond the "good girl meets boy from the wrong side of the tracks and they learn from each other" tale which comprises the main storyline, there are a number of subplots which range from "loser trying to find a date" to "unfaithful boyfriend drama." The endings of each of these subplots can be predicted within seconds.

While "Prom" makes a few insipid attempts at comedy, the only truly (and unintentionally) hilarious moment in the film comes when a shed full of Nova's prom decorations burns down, making the whole scenario even more unrealistic, since it is never referred to again. Are we really expected to believe that a school system this sterile wouldn't investigate a freak case of arson?

The performances are fine, for what they are. Teegarden is inoffensively bland as the incessant good girl Nova. The only real connection she manages to evoke with the audience is sympathy, not for the character, but for the actress herself. We cringe just as much as Teegarden herself likely did as she had to spout off sickening monologues about the spiritual and philosophical importance of prom night. McDonell's character is like a watered down version of the kids from "The Outsiders," but at least he looks the part.

There are a few actors who manage somewhat more capably, especially Kylie Bunbury, who plays the girlfriend of an unfaithful lacrosse player, and Danielle Campbell, as a girl caught between a jock and a nerd. The effectiveness of their performances, however, is bolstered by the fact that the two actresses probably have ten lines between them. There wasn't enough time for the awful material to swallow them whole.

Whether or not you'd like to relive your high school prom, this movie isn't the way to do it. You will roll your eyes so much over the course of this film that you will leave the theater with permanent ocular damage.

Ian Opolski can be reached at iopolski@student.umass.edu.

'Fast Five' contrived, campy

By Nick O'Malley
Collegian Staff

Over a century's worth of American cinema has built up to this one moment, in which two of the greatest actors of our generation grace the screen in one glorious, yet fleeting, menagerie of bald heads, terrible dialogue and excessive set-smashing.

"Fast Five," featuring Vin Diesel and Dwayne "The Rock" Johnson in, surprisingly, their first movie together, is the latest installment of one of the few remaining unintentional comedy franchises. Fortunately, the film takes another step away from the its semi-serious roots towards a much more absurd one.

However, what the entire film boils down to is the creation of a scenario in which the film crams as much driving, fighting, scantily-clad women and melodramatic scenes about family into 130 minutes as it can.

That being said, watching Diesel and The Rock share the screen is like watching a pair of rhinos with jetpacks having a rocket launcher fight over an active volcano.

The opening sets the tone for the movie pretty well, as it completely forgoes any type of driving scene and goes straight for a train heist where the crew cuts open a hole in the side of the train just for three cars.

There's also driving, of course; however, there is less emphasis on quarter-mile drag races that begin in the middle of a crowd of scantily-clad women and more smashing through buildings and gunfire.

In terms of the plot – which is little more than an explanation for all the smashing and driving – "Fast Five" picks up right where the fourth movie's ("Fast & Furious") final scene left off and takes the campy level of physically impossible action from the previous film and runs with it. Fortunately, it runs through a glass window off a cliff and into a parked car with only a couple scuff marks and a limp it will forget about in 15 seconds.

The film reaches its high point when, during their inevitable fight scene, the two tackle each other through a window into another room, through a wall into a third room and then through another window back into the original room with no major bodily harm being done.

The central cast does what it needs to. Paul Walker (ex-FBI agent Brian O'Conner) makes his Paul Walker face for a couple hours. Diesel, as Dominic Toretto looks angry, breathes hard and rattles off terrible lines. The Rock, playing Major Hobbs, does the same thing, except for the fact that he sweats profusely through the entire film. And, unfortunately, the what's-her-face sister (Jordana Brewster) still can't act and even has her token attractive girl spotlight taken from her.

For those who have grown attached to the horrendously undeveloped characters from the franchise's other installments, there is a healthy injection of familiar characters. Roman (Tyrese Gibson) and Tej (Chris "Ludacris" Bridges) from "2 Fast 2 Furious" join Han (Sung Kang) from "The Fast and Furious: Tokyo Drift" as they are drawn in for one last job.

The all-star cast aspect brings the air of an "Ocean's Eleven" type of job, just with more cars and less clothing for women. "Fast Five" even features the "Ocean" type characters of the bumbling guys that no one cares about bickering while they do their jobs.

Somehow, the crew gets the funding to get massive amounts of over-the-top gadgets, computers and simulators for the job, even though it was implied earlier in the movie that the characters hardly had money to eat.

However, glaring plot holes like this one aren't the reason to see "Fast Five:" it's that guy with a rocket launcher. You know what he's going to do with it; just sit back and enjoy it.

At first glance, the romance storyline and any of Diesel's 15 speeches about the importance of family come off as cheesy, but they are necessary for the pacing of the movie. As opposed to a "Call of Duty" game, where there is constant shooting and explosions, "Fast Five" gives the user a break with the characters acknowledging the dangers of the mission and then dismissing them because they all live their lives a quarter-mile at a time.

The transitions, though, are almost laughable, as each scene is glued to another by gratuitous panning fly-over shots of Rio de Janeiro that feature the same slummy buildings. "Fast Five" also makes a point of utilizing the ominous statue of Jesus that overlooks the city. You know, like every movie set in Brazil does.

But after the third dramatic shot of the statue, it bears the question of whether or not the director got one really good sample of B-roll of the city and forgot to get more before hitting the editing room.

Overall, "Fast Five" moves the franchise further away from NOS and street racing to rocket launchers and smashing through walls. But in a campy action movie way, it works. In the end, the characters are silly and overacted, the action involves dozens of people being murdered as a consequence of the characters wreaking havoc and the dialogue is hilariously bad.

You know, everything you'd expect from a "Fast and Furious" movie.

Freshman steals the spotlight on Senior Night for UMass Fri.

MOONEY from page 8

"He's the guy that works really hard," said Cannella. "He works hard every day, and it's great to see him on the board and to be excited about [him] and the guys are excited about him."

Cannella also explained that Mooney came onto the team with what he saw as college-level skills and that the team really enjoys having him.

"He's a guy that has tremendous skill," said Cannella. "He was college-ready when he got here. When he gets here he blends in with our guys and because of the way he shoots the ball and the way he passes the ball, he becomes sort of a role model for a lot of our guys. He made himself before he got here, we're kind of reaping the benefits from it and we're hoping he's having a great experience."

After Friday night's victory, Mooney admitted he'll be looking to continue his hot streak as the team moves forward into the CAA Tournament, which begins Wednesday when the Minutemen face No. 18 Penn State.

Other than their 9-8 loss to Albany, the Minutemen have won all games in which Mooney has scored multiple goals.

The Minutemen huddle up during a timeout against Delaware on Friday night. Freshman Connor Mooney had five goals in UMass' victory over the Blue Hens.

Spring Game highlighted by new quarterback

By Herb Scribner
Collegian Staff

With the recent decision by the Massachusetts football team to move from the Colonial Athletic Association to the Mid-American Conference dominating the discourse about UMass football this spring, there has been a lot of football left to be desired for UMass fans.

On Saturday afternoon, the Minutemen defense and offense competed in an unorthodox contest that saw the defensive unit coming out with a 44-42 victory.

"It was a good day, the score ended up really tight in the end, which you want," said UMass coach Kevin Morris. "You want a good competitive battle."

"We were all excited to come out here, start flying around, start playing some football and having fun," said transfer quarterback Kellen Pagel, who comes to the Minutemen from to be MAC foe Bowling Green.

The contest did not feature traditional scoring metrics with, as Morris explained after the game, points being awarded for touchdowns, defensive stops, interceptions, first downs and other plays.

These untraditional scoring measures gave the defense ample opportunity to earn the victory, as it scored its game-winning points when cornerback Mike Lee broke up a pass to Jesse Julmiste.

Christian Birt and Ryan Carter led the defense as both nabbed an interception. Additionally, Tom Brandt, Carlito Weaver and Stanley Andre earned sacks throughout the competition.

Though the defense earned the victory, there was a lot of offense displayed on the field.

The offense started to pull away early, as it had a 28-12 advantage at one point in the spring game. Part of the offense's success came from Pagel, who transferred from Bowling Green, which went 2-10 last year. Pagel (93 yards, 5-for-9 passing) is unsure if he is going to play with the Minutemen this fall because of transfer rules, but he said he submitted an appeal to the NCAA.

"Honestly, I don't have very much say in what goes on or I don't really know what is going on," said Pagel. "I'm just coming out here every day and practicing as if I am going to play, and I sure hope I do."

Pagel threw three touchdowns in the spring game, one of them coming off a crowd-pleasing flea flicker that saw Pagel catch the final touchdown of the game. The defense was not allowed to hit the quarterback on that play, which gave Pagel the opportunity to score the touchdown.

"It might be a little different down the road when you're throwing that out there and hanging out and he might have to be ready to take a hit," said Morris. "It was a fun play for the kids to try and get everybody involved and keep the thing light and at the same time focused."

Pagel also started the game with a 1-yard run for the first score for the offense.

Pagel wasn't the only quarterback who got a workout on Saturday either, as redshirt freshman Brandon Hill and sophomores Ian Shultis and Raymond Pendagast all competed under center. The trio went a combined 6-for-10 with 68 yards.

"We have no game experience for a quarterback going into the 2011 season, so it's real important to give these guys a lot of reps," said Morris. "It was a much more comfortable day. They were more worried about leading the 10 guys than worrying about themselves like they have been in previous practices."

Jonathan Hernandez had one run on the day for 22 yards.

Igor Garcia shared kicking duties with Brendon Levengood, with the former adding two extra points to help add to the offense's total.

The Minutemen begin their final season in the CAA on Sept. 1 at Holy Cross with their first home game coming Sept. 17 against Rhode Island.

UMass will be ineligible for the playoffs this coming season as it prepares to jump from the Football Championship Subdivision to the Football Bowl Subdivision in 2012.

Anyone who does not hold a current year long parking permit may park in any **Yellow Lot (11, 12 and 13)** during exam time only at no charge.

GREEN LOTS 27 AND 34 ARE NOT AVAILABLE TO PARK IN UNLESS YOU HOLD A PERMIT FOR THAT SPECIFIC LOT.

3rd-straight A-10 title for UM

W. LAX from page 8

goals), two of the Minutewomen's eight point-scorers, both etched their names in the school record-books after Sunday's win.

After registering nine points in two games this weekend, Lyons (220 points) broke a 31-year UMass record for career points scored (Cari Nickerson, 219 points, 1977-80).

Additionally, Ferris tied the single-season goal-scoring mark set by Kathleen Typadis in 2007 with 52 goals on the season.

O'Donnell scored four of the first five UMass goals to begin the first half. She had a pair of goals beginning almost three minutes into the first half, coming 14 seconds apart to put the Minutewomen up 2-0.

Richmond notched its initial tally just over two minutes later, before freshman Tanner Guarino (career-high three goals) and O'Donnell put UMass up 4-1 with two more quick scores, this time coming 10 seconds apart.

"She saw her opening, she took it, she's confident with the ball and, again, she has amazing speed," said McMahon. "I think they put a lot of focus on Jackie [Lyons] and Katie [Ferris] behind the net, and doing that really opened up looks for our girls playing up top."

The Spiders cut the deficit back to one with back-to-back goals by Gabi Wiegand (three goals) to make the score 4-3 with 14:46 to play in the opening frame.

But the Minutewomen offense found a spark before halftime, scoring six straight goals near the end of the half.

Richmond responded with its own scoring streak of three straight goals, carrying over into the start of the second half. The Minutewomen, undeterred, went on another six-goal tear to earn its biggest advantage at 16-6 with 15:18 to play in the game.

Following the run, however, the UMass defense had a lapse to close out the game, allowing the Spiders to go on a six-goal run of their own. Regardless, the Minutewomen will shift their focus to next weekend's NCAA play-in game with hopes of earning an automatic berth into the 16-team tournament field.

"The next [goal] is winning next week's play-in game so that we can be in the NCAA Tournament. That's what it's all about," said McMahon. "Getting into the NCAA [Tournament] is the dream. I think, especially, what you see with March Madness and all the other crazy NCAA tournaments, once you get there, really anything can happen."

Senior Jackie Lyons cuts to the net against Vermont this year. Lyons had two goals in a victory over the Spiders.

UMass A-10 champions

UMass	16
Richmond	12

DAN GIGLIOTTI
COLLEGIAN STAFF

The No. 14 Massachusetts women's lacrosse team won its third consecutive Atlantic 10 Championship Sunday in a 16-12 win over Richmond at Temple's Geasey Field.

Not only did the Minutewomen (16-2, 7-0) complete their sweep of A-10 competition, but they did so in record-breaking fashion.

Junior attack Jesse O'Donnell was named the A-10 Championship's Most Valuable Player after tying a career-high with five goals to lead the UMass offense, which recorded a tournament-record 32 goals over the two weekend games.

"Overall, we played great, we scored a lot of goals, we played great defensively and I think going towards next weekend's play-in game, I think it's going to give us huge momentum and confidence in our favor," said UMass coach Angela McMahon.

The Minutewomen move on to host Canisius in the NCAA Tournament play-in game on Saturday at McGuirk Stadium at 1 p.m. The Griffins beat Fairfield 13-8 on Sunday to win the Metro Atlantic Athletic Conference.

The Minutewomen tied the single-game tournament record for goals scored, both during Sunday's win and in Friday's semifinal win over Duquesne, 16-8.

Junior Jackie Lyons (two goals) and freshman Katie Ferris (three

Cannella & Co. end CAA slate with win

BY JAY ASSER
COLLEGIAN STAFF

UMass	11
Delaware	5

On a night honoring the seniors playing their final home regular season game at Garber Field, a freshman stole the show to lead to the Massachusetts men's lacrosse team to a victory.

Connor Mooney scored a career-high five goals as No. 20 UMass topped Delaware 11-5 on Friday.

"We asked all of our guys to play like a senior tonight and he's certainly one of the guys who did that," said UMass coach Greg Cannella of Mooney after the win.

Along with the festive atmosphere of Senior Night, Garber Field sported an energetic environment as the Minutemen (9-4, 4-2 Colonial Athletic Association) played their first home game under the lights since 2004. While the change in start time didn't seem to give UMass an advantage, it allowed the players to be in full-swing when the game began.

"These college students, they're like vampires, you know," said Cannella. "You play a game at one o'clock, you get them up at nine to eat breakfast, [and] these guys are tired … Maybe a night game they get a little bit more energy, but I'm sure Delaware had the same thing."

After a low-scoring first half which saw UMass take a 3-1 lead into the intermission, the Minutemen exploded in the third quarter.

Mooney tallied three of his five goals in the third period, including back-to-back scores in a 33-second span with seven minutes, 38 seconds remaining in the quarter to give the Minutemen a 6-2 lead. Following a goal from the Blue Hens' (9-6, 4-2 CAA) Nick Elsmo that chipped away at the deficit, UMass responded with three more scores by Kyle Smith, Mooney and Anthony Toresco to close out the period with a 9-4 lead.

In the fourth, the two teams traded goals, with each squad scoring two apiece as the Minutemen kept the Delaware attack at bay to earn the win.

While Mooney was the main finisher at the net for UMass, it was not without good ball movement and helpful feeds. Of Mooney's five goals in the contest, four were assisted by Mike Fetterly and Will Manny, who also notched another assist and a goal for a four-point night.

"I was getting behind my guy's head, but Will Manny and Mike Fetterly were giving me great feeds, so I had the easy part," said Mooney. "They were giving me great feeds to finish the ball."

In the first half, the Minutemen defense and goalkeeper Tim McCormack smothered the Blue Hens offense. Delaware began the game by scoring the first goal, as Eric Smith scored with 4:32 remaining in the opening quarter.

UMass, however, proceeded to score three-straight as Art Kell, Mooney and Colin Fleming put in goals before halftime.

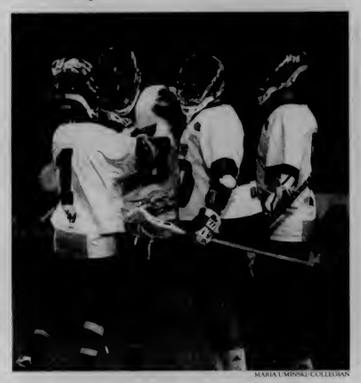
Though the Minutemen took a 3-1 lead into the second half, the offense struggled to find a rhythm and finish opportunities. That's where McCormack's saves were valuable, buying UMass time to get its attack back on track.

"We made some mistakes on that end and Timmy covered up for us," said Cannella. "He made one save on the ground, just incredible off of a turnover that we made. So he was solid, he's been solid."

The five goals allowed by the Minutemen were tied for the fewest allowed this season, the previous five-goal performance coming in the season opener, when UMass and McCormack shut down Army for an 8-5 victory at home.

With the win, the Minutemen enter the postseason with confidence as they look ahead to a matchup with Penn State in the CAA Semifinals on Wednesday night.

Jay Asser can be reached at jasser@student.umass.edu.



MARIA CUMINSKI/COLLEGIAN

The Minutemen celebrate after a goal against Delaware on Friday. UMass defeated the Blue Hens 11-5 at Garber Field.

Mooney glistens for UMass Friday night

BY HERB SCRIBNER
COLLEGIAN STAFF

When the No. 20 Massachusetts men's lacrosse team took the field under the lights for Senior Night last Friday, many were expecting the departing seniors to lead the way.

Instead, freshman Connor Mooney stepped up and led the Minutemen (9-4, 4-2 Colonial Athletic Association) to an 11-5 romp over Delaware with five goals.

"It was the best feeling in the world," he said. "I'm just glad to help out."

Mooney started off his scoring tear in the second quarter as he notched the first goal of that period off a feed from Mike Fetterly. His first goal of the contest handed UMass a 2-1 advantage which it continued to build on.

The third quarter showcased Mooney's strength, as he notched three of the Minutemen's six third quarter goals. Fetterly once again helped Mooney out with an assist, as did sophomore Will Manny, who tossed out a pair of dimes in the quarter. Mooney finished his scoring with an unassisted effort with 9:57 remaining in the fourth.

"Connor Mooney played great; they weren't expecting a lot of us and he played like a senior tonight," said midfielder Anthony Toresco.

Following the contest, Mooney gave much praise to Manny and Fetterly for their generosity during the second and third quarters.

"I had the easy part, they were just feeding me the ball," said Mooney.

Friday night's performance displayed a Mooney that had been seen earlier in the season before he fell into an offensive struggle.

"He had been struggling, but he hadn't been on the board, and when you're a guy who's used to scoring in all the games in high school and being a part of it, sometimes that hurts confidence," said UMass head coach Greg Cannella.

Mooney scored his first goals of his college career on Feb. 26 against then-No. 13 Ohio State, when he notched a pair of scores in the final five minutes of the contest. That offensive performance earned him CAA Rookie of the Week honors.

Things didn't slow down from there, as Mooney continued to be a threat on offense with a hat trick against then-No. 20 Brown. He also scored a pair against Albany and added an assist at Providence.

After a goal against St. Joseph's, Mooney went three games without earning a point. However, Mooney continued to push himself forward to try and get back on the board.

See MOONEY on page 6

Plourde leads UM in wins

BY STEVE LEVINE
COLLEGIAN STAFF

UMass	0, 0
Fordham	6, 4
UMass	9, 8
La Salle	2, 0

Cyndil Matthew remained hot, Lindsey Webster homered twice and Sara Plourde threw two complete games for the Massachusetts softball team, which swept Sunday's doubleheader against La Salle, 9-2 and 8-0, respectively.

After suffering two losses against Atlantic 10-leading Fordham (36-17, 14-4 A-10), UMass (25-17, 12-5 A-10) bounced back with two convincing wins against last place La Salle (4-37, 1-15 A-10).

Junior Sara Plourde started and won both games for the Minutewomen, improving her record to 23-13. In game 1, Plourde threw a complete game and allowed two runs on two hits while striking out 18.

The UMass offense gave Plourde more than enough support, extending its early 1-0 lead with three runs in the fourth and fifth innings, respectively. Freshman Lindsey Webster hit her fifth home run in the fifth inning and finished the game 2-for-3 with a walk, two runs and two RBIs. Sophomore Cydil Matthew also went 2-for-3 with a walk and a run.

"[Fordham] kind of quieted us down a little bit," said Plourde. "But once we came back out here today we busted it open and our bats came alive, so I think that was a really big door-opener for us."

Senior Meghan Carta added a solo home run and three runs scored and junior Kyllie Magill added three RBIs in the rout.

Game 2 was nearly a carbon copy of Game 1, as the UMass offense remained potent behind Plourde, who threw the 12th perfect game in UMass history in the shortened six inning, 8-0 game.

The Minutewomen got it going early, scoring six runs in the first three innings. Webster hit her team-leading sixth home run of the season and drove in three runs while Matthew went 3-for-3, driving in a run and scoring twice. Magill added two runs and an RBI in her 2-for-3 effort.

UMass coach Elaine Sortino, who thought her team looked at too many strikes from Fordham's ace Jen Mineau, was very impressed with her offense, particularly Webster and Matthew.

"She's fantastic," Sortino said of Webster. "To know that we've got so many more years with her, she's just going to get better."

"Cyndil's coming on like gangfire," added Sortino. "She can do it all now. She's killing the ball, she's a triple threat."

While the Minutewomen's offense has lacked consist… Webster is confident that the bats will continue to roll throughout the four remaining regular season games and into the A-10 tournament, which begins next week.

"The pitching [today] wasn't the [same] as Mineau," said Webster. "I still think we can hit her just as much as we hit the pitching today… We can beat Fordham."

The sweep certainly gives the UMass confidence going into its final four games, which feature one non-conference game against BC, two conference games against lowly Rhode Island and a final non-conference game against Quinnipiac. A sweep of Rhode Island is a big priority for the Minutewomen because it would give them the tournament's No. 2 seed and an extra day of rest for Plourde, who has been a workhorse due to injuries to secondary pitchers Webster and Caroline Raymond.

"I can't even tell you how broad [Plourde's] shoulders are," said Sortino. "She literally had to carry the team today and she threw a perfect game."

Steve Levine can be reached at slevine@student.umass.edu.

JEFF BERNSTEIN/COLLEGIAN

Cyndil Matthew makes a catch in a game this year.

Matthew making impact

BY MICHAEL WOOD
COLLEGIAN STAFF

The weather has warmed up in Amherst over the past week, and so has Massachusetts centerfielder Cyndil Matthew.

The Minutewomen have played 10 home games over the past 11 days and have won seven of them, improving their record to 25-17 and 12-5 in Atlantic 10 play. None of that would be possible without an impressive effort from all nine players on the diamond and some hot hitting at the plate.

"We have a mentality of 'see it and hit it,'" UMass pitcher Sara Plourde said. "That's what we're focusing on right now. We've been a little on-and-off with our offense in the past, and that's what has worked for us, so we'll stick with that."

No player has been hotter than Matthew.

She is currently riding an eight-game hit streak which dates back to April 24 against George Washington. Hitting in the ninth spot in the order allows her to be a second leadoff hitter, providing speed and athleticism along with a little power at the bottom of the order.

"It feels good [to break out]," Matthew said. "I feel like myself again."

Matthew is definitely a tough out. In the past 10 games she's gone 13-for-20 at the plate (.650) with four runs scored and two walks. She also added her team-leading 12th stolen base on Sunday, and has only been caught once in almost three months.

"Cyndil is coming on like gang fire," UMass head coach Elaine Sortino said. "She can do it all. [Her hit streak] is awesome. She's killing the ball, she's dropping the ball [for base-hits], and she's a triple threat [on the bases as well]."

In Sunday's doubleheader against La Salle, Matthew remained white-hot. She went 5-for-6 with two walks and a run-batted-in for what was easily her best day of the spring.

"I haven't changed much," Matthew said. "I just have a better mindset at the plate now, and that's helped me a lot. I'm feeling good. And the warm weather definitely helps. It's nice to play when it's nice out. I'm excited [for the rest of the season]."

As much as she's contributed in the measurable statistics, Matthew also provides a spark for the Maroon and White offense. More often than not, it's her heads-up play and aggressive style that helps the team win games.

In Game 2 of Saturday's doubleheader, Matthew hit a line drive down the left field line past the third baseman for a hit. She could have stopped at first base and been satisfied with a single, but instead chose to try to stretch the play out into a double, which would have put her in scoring position with Lindsey Webster, the team leader in RBIs, coming up to the plate. She was thrown out sliding into second base, but Sortino loved the extra effort.

"The fact that she tried to take that extra base, even though she was called out on the slide, I love that," Sortino said. "That's only going to help us."

With the Atlantic 10 tournament right around the corner next weekend, the Minutewomen are looking to stay competitive and continue to improve game-after-game.

"We're definitely thinking about A-10s," Matthew said. "We're thinking regionals, super regionals and eventually the World Series. It's always the mindset of the World Series. We're ready. We're going to do whatever we can to get there."

If they hope to advance deep into the NCAA tournament, the team will need a big contribution from its No. 9 hitter. Fortunately, she seems to be up to the challenge.

Michael Wood can be reached at mcwood@student.umass.edu.

2011 graduates set to blast off into real world next Friday

BY SAM BUTTERFIELD
COLLEGIAN STAFF

As America's economy continues to struggle and seniors inch ever closer to clearing out of their rental homes and dorms, the University of Massachusetts is bringing its outgoing fourth-years a commencement speaker from an unlikely place: outer space.

NASA astronaut Catherine "Cady" Coleman, a UMass alumna, will deliver this year's undergraduate commencement in a taped address from the International Space Station on Friday, May 13 at 5 p.m. at McGuirk Alumni Stadium.

Whether Coleman will tell UMass' crop of 4,300 outgoing seniors to blast off remains to be seen, but she certainly will offer her congratulations on a collegiate mission accomplished and may even encourage the seasoned seniors to do some gravity defying of their own.

According to an April 27 release from the UMass Office of News and Media Relations, Coleman earned a doctorate in polymer science and engineering from UMass and now works as a chemist. She is also a former U.S. Air Force colonel, the release states. She earned her bachelor's degree from the Massachusetts Institute of Technology in 1983, and was chosen by NASA to be an astronaut in 1992. She has served on two space missions prior to her current one.

Prior to undergraduate commencement exercises, graduate commencement will be held at 9:30 a.m. Friday in the Mullins Center. Stockbridge School of Agriculture ceremonies will be held at noon Friday in Bowker Auditorium.

Also at undergraduate commencement, CNN political analyst and former presidential aide David Gergen will be awarded an honorary degree. Two UMass alumni, Jerome M. Paros, a leader in measurement science, and Kenneth L. Brayman, a top diabetes researcher, will receive Distinguished Achievement Awards.

At the morning's graduate commencement ceremonies, William McKibben, an author and environmental activist, will receive an honorary degree and give brief remarks. Alumnus and prominent experimental musician Yusef Lateef will also receive a Distinguished Achievement Award.

At undergraduate commencement, graduating journalism and economics major Alan Taylor Ulichney of Stow, Mass., will give the student speech. Twelve outgoing seniors will be recognized as 21st Century Leaders, and two other students, Joseph Bliss and Igor Dobrusin, will be honored for "leadership and executive ability" as Jack Welsh Scholars. According to the release, Bliss is the student member of the UMass Amherst Foundation Board of Directors while Dobrusin is a double major in finance and philosophy.

Faculty Senate gives OK to tobacco ban

BY WILLIAM PERKINS
COLLEGIAN STAFF

(Editor's Note: This story was originally published on April 7.) Members of the University of Massachusetts Faculty Senate passed a proposition April 7 that aims to ban the use of all tobacco products on campus beginning in 2013.

The Senate approved of the proposal in a 14-7 vote, after several students spoke against it and some faculty members spoke in favor of it.

The policy — which won't go into effect until July 1, 2013 — was brought forward to the Senate by the University Health Council. It calls for the prohibition of all tobacco products on University property. In addition, it bars tobacco use in any vehicles on school property, and also prohibits the use of electronic cigarettes.

Sen. Tobias Baskin, a professor of biology who serves as the chairman of the Health Council, said at the onset of discussions on the meeting that statistics show tobacco use is responsible for the deaths of thousands of Americans each year, and that similar propositions have worked at many colleges across the country.

"It is reliably estimated that in America last year tobacco use killed more than 400,000 people," Baskin said, adding that use of such products can make people susceptible to diseases and can lead to economic hardships.

Baskin also said studies show that students enrolled at tobacco-free universities are less likely to become smokers.

"There's enough history with tobacco-free campuses that there [is] actually data," he said. The proposal cites the Universities of Florida, Oregon and Michigan, as well as the UMass Medical School in Worcester as campuses with similar tobacco-free policies.

Additionally, Baskin noted that "the purpose of the policy is educational, not punitive." Baskin added later on during the discussions that the new policy will mostly be enforced on a voluntary basis. He likened it to when signs went up at the UMass Recreation Center instructing students not to dispose of gum in drinking fountains – which, he said, significantly decreased the practice.

"Mostly, people will comply voluntarily," Baskin said, adding that it's his

Caret to take over as next UM system President this summer

BY SAM BUTTERFIELD
COLLEGIAN STAFF

(Editor's Note: This story was originally published on January 17.)

The University of Massachusetts Board of Trustees announced at a Thursday meeting that it had unanimously named current Towson University President Robert L. Caret the next President of the UMass system.

Caret, 63, is a New England native, hailing from Biddeford, Me. He is presently the twelfth president of Towson, a public university located in Towson, Md., and conducted his undergraduate studies at Suffolk University in Boston and his Ph.D. work at the University of New Hampshire.

"We are pleased to announce that Robert L. Caret will become the next president of the University of Massachusetts," said James J. Karam, chairman of the search committee and acting chair of the Board of Trustees, in a release late Thursday afternoon, after the decision came in around 6 p.m.

"It is an honor to have been asked to lead this world-class and world-renowned university system," Caret told the board. "The University of Massachusetts is one of the nation's premiere public research universities and provides a beacon of hope and opportunity for so many. I look forward to building upon its tradition of excellence in academics, research and public service."

The University of Massachusetts Presidential Search Committee named three finalists for president of the UMass system in a Thursday morning meeting in Boston.

The three finalists were executive vice president of Indiana University-Purdue University Indianapolis (IUPUI) Charles R. Bantz, Caret, and Phillip L. Clay, the chancel-

UM student arrested in threat of Fla. Rep.

BY SAM BUTTERFIELD
COLLEGIAN STAFF

(Editor's Note: This story was originally published on February 1.)

A University of Massachusetts student is awaiting extradition to Southeast Florida for allegedly making threatening emails to a Florida state representative.

Manuel Pintado, 47, of Northampton was being held at the Hampshire County House of Corrections in Northampton after police there took him into custody at the request of Martin County, Florida law enforcement.

Pintado was arrested last night for allegedly sending Rep. William D. Snyder, a Republican representing Florida's House district 82, a message attacking him for his involvement in a bill which would allow police to ask anyone for proof of citizenship, according to a release from the Martin County Sheriff's Office.

According to the Feb. 1 statement, the text of the email read "To the Honorable William D. Snyder; You better just stop that ridiculous law if you value you rand your familie's lives asshole."

Snyder's office received the communication Jan. 8, and contacted Martin County Sheriff Robert L. Crowder's office the next day.

NORTHAMPTON POLICE DEPARTMENT

UMass student Manuel Pintado was arrested in February for allegedly threatening Fla. Rep. William Snyder.

Martin County Investigations Division Detective Brian Broughton then commenced an investigation to identify the sender and the legitimacy of the threat. Broughton was able to determine the sender of the unsigned email was Pintado, after tracing the email's origin to a public access wireless Internet

Minuteman Marching Band plays on despite director's death on trip to Big House in Mich.

BY LINDSEY DAVIS
COLLEGIAN STAFF

(Editor's Note: This story was originally published on September 20.)

At the University of Massachusetts-University of Michigan football game in Ann Arbor, Mich. Saturday, Sept. 18, one of the biggest stages ever for the UMass Minutemen Marching Band, the band took the field to perform without their beloved leader and cherished friend.

George N. Parks, 57, the University band director for the past 33 years, passed away last Thursday after suffering from a heart attack following a performance at Cuyahoga Falls High School in Ohio, said Frederick Omega Pye, associate director of the band.

The band decided to continue on to Ann Arbor, Mich. to play on Saturday as planned. Assistant Director Thomas Hannum, who assumed leadership of the band during the game, placed Parks' hat on the conductor's podium for the show.

"It's a mixture of awesomeness and sadness. We don't know what to feel," said junior color guard member Kassie Wolin as she sat on the sidelines with the band.

It was a surreal feeling throughout the weekend for the Marching Band.

"It feels like he is going to come in the stadium any second," said Pye.

The band embarked on its long anticipated trip to the University of Michigan Thursday morning. The caravan of seven coach buses stopped at Cuyahoga Falls High School Thursday night to perform for the local community and spend the night in the school gym.

Prior to the game, Parks began to complain of chest and neck pain, said Pye. His close colleagues urged him go to the hospital but he insisted on completing the evening's show and promised he would go immediately afterwards.

Very few were aware of Parks' pain, said Pye. The 57-year-old director fainted next to the van

Towson's Caret next UM system President

CARET from page 1

lor of the Massachusetts Institute of Technology (MIT).

After the Committee made the recommendations, the names were passed on to the Board of Trustees, which met in Boston later that afternoon to make its selection.

Caret, the president of Towson, located just outside Baltimore, has also been a faculty member, dean, executive vice president and provost at that institution in his 25-plus-year career. He has had administrative experience outside Towson, as well, as he served as president of San Jose State University in California from 1995 to 2003, according to the UM release.

He also has some local roots, as he received his Ph.D. in organic chemistry from the University of New Hampshire and a Bachelor of Science in chemistry and mathematics from Suffolk.

The UMass system has been seeking a successor to current President Jack M. Wilson since he announced his plans to step down in March of 2010. Wilson, who has served as President since Sept. 2, 2003, will leave when his term ends June 30. Following his departure, Wilson will join the faculty at UMass Lowell.

In the release, Karam praised the Committee for what he called "an open and comprehensive process," which he said will "ensure that we choose an outstanding new leader for the University of Massachusetts," said Karam, the President of Fall River's First Bristol Corp.

UM student Pintado facing trial in threat of FL lawmaker

PINTADO from page 1

line originating at the Starbucks at 211 Main Street in downtown Northampton, a short distance from Pintado's Hampton Street residence.

Broughton then contacted Northampton Police seeking support in the investigation. Northampton PD interviewed Pintado, who, according to the release, told police in the Pioneer Valley's anchor city he views himself as a "political activist." According to the release, Pintado admitted to NPD that he had sent the message, and said he believed Snyder was seeking to abolish the 14th Amendment, which establishes that all people "born or naturalized in the United States" are citizens of the U.S.

Snyder has led the charge in the Florida house on drafting an immigration bill which some have compared to the controversial law in Arizona which allows police to ask any citizen for proof of immigration papers or citizenship.

Pintado told Northampton Police he did not wish to harm Snyder, but also said "he was glad the email made him nervous." Broughton was also able to confirm that Pintado had traveled from Massachusetts to Florida last December, "giving him the ability to carry out a threat against Representative Snyder."

Broughton then secured warrants for Pintado's arrest on charges of corruption by threat, a third-degree felony, and written threat to kill or do bodily harm, a second-degree felony.

Last night at approximately 8 p.m., Pintado was taken into custody without struggle in Northampton. According to the release, Pintado "has a history of multiple arrests in the Northeast," and "lists his occupation as a student at the University of Massachusetts."

Several phone calls to UMass' executive director of news and media relations Ed Blaguszewski's office and home phones were unreturned immediately, but a report in the Springfield Republican stated that Blaguszewski confirmed Pintado was a student at the University. Calls to the Registrar's Office were also unanswered, as the office has closed due to the snow storm blanketing much of the Northeast.

In the statement, Martin County Sheriff Robert L. Crowder said he was glad his organization had been able to coordinate with its counterparts in Western Massachusetts to protect a public servant.

"The safety of those who serve the public, in any capacity, is of utmost importance and a matter we take very seriously," he said. "This individual made a serious threat to both Representative Snyder and his family, and that is something that law enforcement and the citizens of the State of Florida will not tolerate."

Northampton PD Capt. Scott Savino was reached before press time, but did not return calls seeking comment on the nature of the arrest and Pintado's extradition status before press time. Calls to Snyder's Tallahassee office were unanswered as of press time, and his Stuart, Fla. office was reached but did not deliver comment by press time.

Band plays despite Parks' death

PARKS from page 1

that would take him to the hospital five minutes from the high school. Paramedics arrived at the scene and transported him to Summa Western Reserve Hospital. He was pronounced dead at 11:02 p.m.

The band was fast asleep on the gym floor when Hannum woke them around midnight. He asked the band to gather around and broke the news that Parks had passed away, said Pye.

Band members described the next few moments as that of instant shock, followed by hours of tears and grieving. Five local clergymen were called to assist students and faculty during the grieving process, but arrived to find that band members were using each other for support.

"They are a family," said Pye. "They consoled within each other. Everyone was so impressed with their maturity."

After hearing from University officials and the opinions of band members, the band took a vote and decided to pack up their instruments and head to Ann Arbor.

"We knew that we would never be the same again if we stopped now," said Pye. "It is what he would have wanted and the students wanted to do it for him."

With 110,187 people in the stands, the band ran on to the field wearing black felt armbands at halftime for a five-minute performance of a Madonna medley including "Like A Prayer." An announcement made at the stadium stated that the game had the most television viewers for a college football game in the country on Saturday.

After the game, in Big 10 tradition, the two bands split the field and alternated playing their halftime show music for the lingering guests, including Michigan's Lady Gaga medley and UMass' 'The Wind and The Lion,' 'Oye Tu Conga,' and 'God Bless America.'

To conclude UMass' performance in the stadium, Hoop Band director John Leonard took to the podium to lead the band in Frank Sinatra's 'My Way.'

To honor Parks, the Michigan marching band learned 'Fight Mass' to perform during their pre-game show. Though known for being ruthless on visiting athletic teams and bands, Michigan fans stood among Massachusetts parents and supporters to cheer for the marching band, respecting their loss.

"[Parks] believed that the band was the heart and soul of the campus," said Jeff Cox, chair of the Department of Music and Dance. "The faculty is in shock. George had no prior health issues that I know of."

Carol-Ann Batchelder, director of special gifts and programs, noted that two of the "biggest things" Parks wanted were a chance to play at the University of Michigan and the construction of a band building.

She added that Parks had put together the most successful grassroots campaign she had ever seen, raising $1.4 million for the band building. The building was named the George N. Parks Marching Band Building at Homecoming last year. She said it is expected to open in March, 2011.

"He leaves such a lasting legacy that it will go on forever," she said.

Professor George N. Parks led the University of Massachusetts Minuteman Marching Band for 33 years through halftime shows, parades, presidential inaugurations, marching band festivals, the Bands of America Grand Nationals, and more.

Alyssa Creamer, Matthew M. Robare and Chris Shores also contributed to this report.

Lindsey Davis can be reached at lmdavis@student.umass.edu.

Campus could be smoke free if tobacco ban goes into effect

TOBACCO BAN from page 1

understanding that 95 percent of people on campuses already with a tobacco-free policy voluntarily comply with regulations.

In addition to Baskin, Sen. Richard Bogartz, a professor of psychology, also spoke in favor of the ban. He said he often feels "attacked" by cigarette smoke on campus, and that he thinks a state law that requires smokers to be at least 20 feet away from a building is often violated.

And Wilmore Webley, a professor of biology who has been spearheading many of the efforts behind the proposal, noted during the meeting that second-hand smoke affects many in the country.

"Second-hand smoke kills more Americans in any year than guns," Webley said.

He added he feels a tobacco-free policy is "preserving everyone's right," noting that it doesn't necessarily force smokers to quit because they can continue to smoke off-campus.

However, many students expressed their opposition to the proposal during the meeting, noting that it would be unrealistic to have all smokers go off-campus to smoke, and that they feel the policy infringes upon their rights.

Nathan Lamb, a political science major who also serves as a senator in the Student Government Association, said he feels parts of the policy infringes on individuals' rights. He said people should be allowed to smoke in their own cars when on campus – because it's not affecting anyone else.Ben Taylor, also a political science major, said he doesn't feel instituting a prohibition policy will be very effective"We have found as a country that prohibition doesn't work," Taylor said, noting that it didn't work with tobacco and that he doesn't think it works with marijuana.

Taylor added that he doesn't think the resolution will be enforceable. He also said that the policy would be unfair for UMass employees – who, like all students and guests on campus, would not be permitted to smoke on University property.

George Williams – a freshman English major who said smoked as early as middle school, but no longer smokes – told Senate members that sometimes when he was younger cigarettes were the only thing that got him through the day.

"The only thing that really kept from killing myself was cigarettes," said Williams, who noted that he is not in that condition anymore. "You're [going to] have deaths" with the policy, Williams added.

Besides gaining the approval of the Health Council, the proposition also got the go-ahead from the UMass Campus Leadership Council – which is composed of members of the administration – before being approved yesterday.

Additionally, the approved smoking ban proposal calls for the creation of a Tobacco-Free Campus Committee, which will be made up of members from the student and faculty body and will be charged with carrying out most of the implementation of the policy.

Secretary of the Senate Ernie May, who also served on the Health Council, said members will be willing to meet with representatives from the Student Government Association to go over any concerns.

Faculty Senate Presiding Officer W. Brian O'Connor also noted there are still two years until the policy goes into effect – which, he said, will allow for most people to have their say in the matter.

"We've got two years to work on this," he said. "I'm convinced everyone will have their say."

William Perkins can be reached at wperkins@student.umass.edu.

DC worker makes sure students' days are made beautiful

ROSADO from page 1

me feel good to see other people happy."

In Rosado's efforts to do that, she's developed a catchphrase that has become a fan favorite by students and has garnered a bit of attention recently: "Have a beautiful evening" – a statement that she recites each night she's cashiering at the facility. The phrase has become so popular by some, that it's spawned a Facebook fan page, which has garnered over 1,100 fans in just the two weeks since its creation.

Rosado – a 25-year-old who lives in Ware with her mother, stepfather, nephew and nieces – said she doesn't remember how exactly she came up with her noteworthy phrase, but noted that she says it because she wants all of the patrons of Franklin to have the best evening that they can.

"I actually don't know how I came up with it," she said. "I just want[ed] to wish everybody … a really good evening. And I was like, OK, beautiful is the best and I want them to have the best evening."

And she wants to make those she sees each night smile, too.

"I actually want to put a smile on someone's face," said Rosado, who's worked at Franklin for about three-and-a-half years. "And if I put a smile on at least one person's face, then it makes my whole night better."

Rosado, who's lived in Western Massachusetts for most of her life, said she could always remember being happy.

"I basically grew up as this happy girl always happy," she said. And even when times weren't always easy for Rosado – who said she was bullied during some of her school years – she maintained a smile on her face and managed to get through them.

"There was [a time] it was hard, but I just smiled it through," she said.

Rosado wants to help students who might have had a rough day or might be going through hardships to smile, too.

"If I can brighten up someone's night, then they're having a good night and that makes me feel good in the long-run, to know that I had some kind of influence on that," she said.

Rosado thinks she's accomplished that goal. She said that – even before the Facebook page dedicated to her was created – students would come up to her and tell her that she made their day better.

"That makes me feel good," Rosado said.

And, since the creation of the page, several current and former members of the UMass community have given her positive feedback – both online and in person. Comments on the page range from praises of Rosado's attitude to a suggestion that she should run for president.

Rosado said that she was both thrilled and surprised when she stumbled across the page.

"I'm actually excited," she said of the page. "I'm really grateful [that] the students made this page."

Rosado's co-workers are enthused about the page as well.

Marc Morrisette, the manager of the Franklin Dining Commons, said that most of his employee's have been supportive and praiseworthy of the page and Rosado.

"I think it's great that people enjoy her," Morisette said. "I think it's great that people like to hear from her."

Morrisette, who's been managing Franklin for about four years and hired Rosado, said Rosado was assigned to do cashiering about a year ago, due to her good people skills.

"She's really good at interacting with the customers," said Morrisette, who noted that Rosado is one of the best in her post. "I feel that I can utilize her skills the best there."

Additionally, several students have expressed their enthusiasm with the creation of the page, too.

"Regina's my favorite person at Franklin," Douglas Smith, one of the first people to become a fan of the Facebook page, wrote in an email to the Massachusetts Daily Collegian. "It amazes me how much effort she puts into just telling people to 'have a beautiful evening' and trying to make them smile.

"She really does make a lot of people happy, and I think she should be recognized for what she does," Smith added.

Rosado, however, said that she just wants to "spread the joy."

THE MASSACHUSETTS DAILY COLLEGIAN

EDITORIAL OPINION

"The times, they are a-changin'" –Bob Dylan

TUESDAY, MAY 3, 2011 EDITORIAL@DAILYCOLLEGIAN.COM

Collegian Staff 2010–2011

Nick Bush

As I write my final words ever to be printed in the Massachusetts Daily Collegian, things seem to have come full circle. Southwest is again aflame, with drunken crowds still looking for any decent reason to scream at the top of their lungs, and the police are still perched on their (high) horses. Ding dong, bin Laden is dead. As all the hootin' and hollerin' echoes off of the ugly exterior of JQA, I can't help but wonder if my grandchildren will be taking part in their first UMass riot in this same spot 50 years from now. It would make me damn proud. By then global warming will have turned the Southwest beach into actual beachfront property. The fact that Boston is submerged under the Atlantic should be a boon to the University's recruiting efforts.

Back in 2007, at the beginning of my great college endeavor, four years seemed like forever. After graduating from high school, The College Experience appeared an epic adventure in the making. Much fun was to be had, and work to be done. In the process, I was to be made into Minuteman material. A lot was supposed to change in this timespan, but essentially I still feel like the same person.

I still hate long walks on the beach. I still procrastinate too much, and also still don't eat enough vitamins or vegetables. I'm still going to be late for my own funeral. I'm still pathetically cynical, although it seems increasingly justified in an era that canonizes Justin Bieber and dubstep. Whatever happened to authenticity? Did TV kill the radio star? Is the Internet strangling what little is left of our culture?

In the meantime, I've gorged myself on the fruits of The College Experience. I've made some incredible friends. I've lived in the dorms, and then somehow managed to get the hell out of there before getting arrested or contracting a disease from the showers. Ken Toong has filled me to the brim with Franklin chicken wings, time and time again, without fail.

I've learned about the Pioneer Valley. There are the Birkenstockian, organic granola revolutionaries. There are the pickup truck driving, chain-smoking blue collar types. There are the polo-wearing, collar-popping, I'm-related-to-Jeffrey-Amherst variety of old-money folks, riding their family's reputation to the top. And there are the students, dedicated to keeping things interesting one body-shot of tequila at a time.

Thank god I'm leaving before this goddamn smoking ban takes effect. It has taken me three Marlboros just to finish this paragraph, and I'd rather poke a pair of hot irons into my eyes than deal with University taking away the one legal chemical that got me through the long, sub-zero January walks across campus the past four years.

In the meantime, I've gorged myself on the fruits of The College Experience.

Surprisingly, it turns out that hazy memories can sometimes be the most rewarding and pleasant. Don't be afraid to make mistakes while you still can.

This fall shall bring the annual hordes of new freshmen, completely unaware of the rebirth that awaits them. They will arrive on campus by the flock, stupid and naked like newborn babies.

Soon enough they will see what it's like to be in the college rat maze, led down pre-constructed paths from the food trough to the mouse wheel. It can be hard to resist the urge to chew your way out of the maze prematurely, but I recommend following the cheese.

Nick Bush was The Collegian's Editor-in-Chief. He can be reached at editor@dailycollegian.com.

Nick 'The Torso' O'Malley

I'm spoiled.

For approximately four years, I've had a creative outlet that has let me write pretty much any of the junk I'd send in, including: a column about my glue stick, a rhyming beer column, something about how bacon is the symbol of our generation, a paper cups column, articles on both cheese and unicorn steaks, columns about that time I went to Ireland and a column that was just me complaining about things.

Not everybody gets that, especially in the real world. It's good, because I really do like writing, ever since Mr. Plante taught me how to do it in my junior year of high school. I like that, no matter how crazy my college career got, I never gave up the column.

I hate everything. Well, I like to say I do. It's something that can only be said when the good things are either truly ingrained into life or taken for granted. I try to keep it in the former.

It's easy to lose, though, the Little Things in life. The things you don't hate.

I like the Little Things, the nuances, the little in-jokes, references and old stories that define friendships and family. I don't believe in the Big Things. It's a label, a lame reason to gloss over the effort that goes into defining these things.

There's no room in life for the Big Things, lest your risk your life giving way from life yanking away a boulder.

There's the old story about the professor who fills a jar with big rocks, then little rocks, then pebbles and then sand. It's crap. Life should always be fine grains of sand. The rocks are useless, cumbersome excuses to say that something is important in your life. But that's now how the Things in life work. They're all intertwined and full of little intricacies. A rock takes things for granite and lives with blunt definitions.

That's not the way to go through life. You've got to enjoy the Little Things. Here's a few:

I like good beer (I like it the way I like my women.) I like playing old SNES RPGs, over-leveling my characters and then cussing through the rest of the game. I like the NFL Draft more than should be deemed necessary for a sane person. I like puns and portmanteaus – punmanteaus. I like being left-handed as a character trait. I like putting fried eggs on top of various food items. I like working; it's better than not working, even if it's not good for me. I like how I forget, on a pretty consistent basis, that I lived in Europe for five months.

I like stumbling onto something I could build four years of my life around on the second floor of a dorm – twice. I like how I'm going to get crap for being reflective and emotional.

I like clumsy Sesame Street interns who come back to help with the insanity and call people muffin. I like racing to pull the seventh needle, video game arrangements in Finale and calling someone my roommate two years since we'd lived together. I like Flynnritos, Yoshi rides and still being able to maintain a friendship even though it's weird (I know you know). I like smoking beers, speaking Panda and picking people up from Mobil stations in the middle of the night. I like hedgehogs, bad decisions that are good for you and dentists who have a little side job. I like General Silver Bruce Iron Liver Campbell Panther Dragons of the West, drinking rum in the freezing cold and that one thing we talked about that we won't bring up again. I like people who eat food cold even though it's weird, who always seem aloof, even though they're always there when it counts.

I like people who can't say no to others and never ask for anything in return. I like those who work their ass off so others can have what they can't, even if they have to wear a damn apron to do so. I like Icemen, people who don't know they're idols, people I can talk with about nerdy things. I like people who cosplay, who stress out over everything and, after it all, I get along with really well.

I like crazed half-pint editors who are ambitious enough to move up against a friend, take me on cigarette breaks even though I don't smoke and put me into a room to get me to talk finally. I like adding Bob to other peoples' names for no reason. I like someone who picks himself up after being at the bottom and is Happy for once. I like squids and doing stupid things. I like Tasmanian Devils, even when they disappear back into Belchertown.

I like people with too many catch phrases and who find the mind-bogglingly boring parts of Madden as excited as I do. I like people that know where they stand in life. I like knowing that someone's smarter than me and that, no matter where we go in life, it's better than Bellingham. I like helping people get away from the dregs of life (Whole Foods) to paradise (Ireland).

I like hating everything.

I like dungeons. I like talented, bitter assistant editors, go-to podcast guys and editors that are both brosey and goofy. I like the Old Guard, especially Snowmiser and Heatmiser, but can't forget about the gifted but mopey one and the one who put up with Morris with me. I like goofy, unlikely successors, grandpas and telling twins apart, because identity matters.

The Big Things are the bane of a healthy existence. Friends drift in and out, family members move away, people pass on before their time. There's no room in life for the Big Things, lest your risk your life giving way from life yanking away a boulder.

This is a pessimistic thought, but it's not without an upside. It's true, life that's why the Little Things matter. So that you can build something that will keep you happy when life starts to suck – and it will.

Because, at the moment, I don't know if this is everything I want. But I sure as hell have something.

Nick O'Malley was The Collegian. He can be reached the same old way. He's not going that far.

Amanda Joinson

From the beginning of freshman year, senior columns have always been my favorite part of the Massachusetts Daily Collegian. For just a minute you are let into the life of someone that has been in Amherst the past four years and yet has had such a different experience then your own. Senior columns just put things in perspective, for me at least, and related or not after struggling to produce 750 words bi-weekly for this newspaper I figured this column, if anything, would be the easiest thing I will ever write.

I was wrong. I've been staring at a blank Word document for about a week debating where to start. And now that the due date has long past and thus is my absolute last chance to share my experience, I have to go in and commit.

I guess it all started, like everyone else, in high school applying for schools. I had no idea what to do, I just knew I wanted to go somewhere with anything I would ever be interested in. The University of Massachusetts popped up on the list.

Somewhere down the line after visiting campus in January on a day with sub-zero temperatures I decided this was the place I was going to attend for college.

People ask me now, being from New Jersey, why I choose UMass. To be honest I don't know what the deciding factor was but we can pretend it was because UMass had the most options.

I came here blind, knowing I wanted to do something with architecture, communications, or marketing – maybe. I took classes in all the above and decided on communications by sophomore year. I completed my communications requirements by junior year. I also needed something to do for the remainder of my 120 credits so I dabbled in psychology for about a day – not kidding – I was in the major for a day. The following day I switched out and joined the journalism department which offered some pretty cool classes like web design and photography.

But whoever said going into college undecided slows you down and causes you to attend extra years is lying. In a few days I will be graduating with two degrees and a minor in the same time it took many to receive one. I would say I've turned out pretty well.

But I'm getting ahead of myself.

I also came to UMass alone. I didn't have anyone from high school to run back to unless I was going to travel three hours every weekend. I stepped out of what I knew and took a chance and this may be totally cliché but I'm extremely glad I did.

The combination of mini-heart attacks and the asbestos I've probably been inhaling for the last two years was worth it.

I've met people so completely different than me, people I would never have imagined associating myself with going into all of this but they've become some of my best friends.

I guess what I'm trying to say is that UMass has really opened a lot of doors for me. Not to sound preachy, but join a club or something you really enjoy doing. Devote yourself to something other than schoolwork for a few hours a day.

The Collegian is the best and worst thing that has ever happened to me. I've been working in the graphics room, which is actually a really neglected part of the Campus Center basement with a leaky ceiling and ugly new-born-baby-boy-blue paint on the walls. For some reason this place has become my second home, so much so that I walk about barefoot on disgusting carpet that whoever is supposed to clean those sort of things forgets about. I know that sounds totally gross, but I've probably spent more time in that office then anywhere else in Amherst.

I've designed too many advertisements that not enough people have looked at for two years and loved every second.

Okay, that was a lie. Every time an ad ran wrong I had a mini-heart attack. Seriously, the guy at Off The Wall Games hates me. And Adam, if you're reading this I'm REALLY sorry.

The combination of mini-heart attacks and the asbestos I've probably been inhaling for the last two years was worth it. I've gained some valuable experience working with a diverse group of kind of odd people that you would never picture meshing together that I would have never had the chance to cross paths with otherwise.

See, I didn't think I could fill 750 words and now I only have space for like 20 more.

In the end plain and simple, I'm extremely thankful for the opportunities that presented themselves to me here at UMass. I came in knowing nothing about what I wanted to do and now I almost have two degrees. I've stayed up way to late writing papers at the crack of dawn and talking about nothing with good friends. We did bad things because we were in college. I went with the flow and allowed myself to get involved just about everything I would have ever wanted. I guess that was all I could have asked for.

Amanda Joinson was The Collegian's Advertising Production Manager. She can be reached at ajoinson@gmail.com.

Matthew M. Robare

This is it. These are the last words I will ever write for The Massachusetts Daily Collegian, after God knows how many thousands. I've had a good run, but it's over. Finished. Ended. Done. Fin. There will be no more after this.

Now all there is left for me at the University of Massachusetts is my last final and then I'll be a free man. Then the normal thing is to find a job, find a place to live and generally become a productive member of society.

However, I still want to be a journalist, so the normal thing is just not going to happen because nothing is ever normal for journalists.

But working here with all these great and wonderful people in that windowless, airless dungeon of an office as the fluorescent lights beat down on my brain, staring at a throbbing, flickering computer screen filled with prose I have to put in readable form before time runs out has been an experience. It happened. It was an event in space-time. So many memories I can never forget, no matter how hard I try to repress them – but I dished it out as well as I could take it.

But seriously, the people I've worked with at The Collegian, as well as my friends from Student Valley Productions and the Newman Center, have been the best people I've ever known in my life, even you, Herb.

But seriously, the people I've worked with at The Collegian, as well as my friends from Student Valley Productions and the Newman Center, have been the best people I've ever known in my life, even you, Herb.

Doing The Morning Wood was always amazing; the most important issue of the year, without a doubt. I still can't believe I wrote an entire editorial in "LOLCat" English and I think I did an awesome job with the letters. I'm still disappointed I couldn't use a picture of a duck in BDSM gear in this year's issue.

As Editorial and Opinion editor my goal was to make my page a place for free speech. I tried to reach out to the various groups on campus that have organized around a cause or background and I welcomed everyone to the section who was willing to commit. I think I succeeded, but not as much as I would have liked.

During most of my time at The Collegian I've tried to present a satirical take on life at UMass with my columns and the "Five Reasons Why" because someone has to. Far too many people here take themselves way too seriously and inflate their importance far in excess of the actuality. The biggest culprits are members of the Student Government Association, some of whom seem to forget that they're a pretend government. Campus radicals are another group on a major ego trip: look guys, no one knows what you're talking about and no one cares. But the UMass administration's collective ego exceeds anything any student could ever hope to delude themselves into believing. My dearest hope is that more satire will be found in The Collegian in the coming years and everyone on campus will be able to take themselves less seriously.

Basically, UMass, get over yourself.

On a more serious note, the one lesson I have learned over and over again is that students need to learn the school's past. We have almost no institutional memory and that makes us very vulnerable to professors and administrators who spend more time here than we do. Things that happened five or more years ago are completely lost to the mists of history. The Collegian and its archives could be a valuable tool in the fight for student rights, but they need to be used.

Meanwhile I'm going to continue to wonder why everything about farewells seems trite and cliched. What do I care? I'm getting out of here.

Eat, drink and be merry, for today we (figuratively) graduate.

Matthew M. Robare was Editorial and Opinion Editor. He can be reached at mrobare@student.umass.edu.

Nora Drapalski

I can think of no better way to begin my final article for the Massachusetts Daily Collegian than to quote the great Albus Percival Wulfric Brian Dumbledore. So, without further ado, "Nitwit! Blubber! Oddment! Tweak!"

My time at the University of Massachusetts taught me one thing: bigger means more. In the case of UMass, this means more classes to choose from, more people to get to know and befriend, more activities to get involved in on and off campus, and more chances for you to figure out exactly what you want to do with the rest of your life.

As a freshman, I arrived at UMass with my college career all figured out. First, I would start off as a classics major with the plan to add a psychology minor. Then, in my sophomore year, I would add Legal Studies as a second major, and begin my journey on the road to becoming an entertainment lawyer.

I didn't quite expect how greatly this plan would change.

In the fall of my sophomore year I decided to join three organizations on campus that ended up affecting the career path I eventually chose to take. The first was the Film Studies Certificate program. After realizing that I could put my interest in film to good use, I started taking film courses in the communications department through the certificate program, eventually leading me to add Communications as a second major.

Now, instead of pursuing a career as a lawyer, when I graduate, I will be trying my hand in the film industry.

WMUA was the second group I decided to join as a sophomore. I immediately launched into the six-week training process as a new member, becoming a DJ by the winter of the same year. In my junior year, I became the DJ Training Director, and in my senior year, I became the Fund Drive Director. Due to my experiences at WMUA, I was inspired to get an internship with Clear Channel Radio in my hometown, which has proven to be one of the most enjoyable and fulfilling activities in my life.

The final group I joined was the Collegian. My involvement with the Collegian began in the fall of 2008, when my close friend and future co-editor, dragged me along to a meeting saying, "I swear you'll have fun." Doubtful and more than a little annoyed, I went to that first meeting seriously questioning the likelihood of her words. I had never considered myself to be a wonderful writer; why would I even think about writing for a newspaper?

After meeting the wonderful Arts crew at that first meeting, I quickly realized that regardless of my insecurities, the Collegian definitely had room for me in their tight-knit group. Now, as a writer and Assistant Arts Editor nearly three years later, I can proudly say that I am a part of this family.

As I prepare to graduate and leave UMass, I find it difficult to believe how quickly the past four years have flown by. Although I'm sad to say goodbye, I am grateful for the experiences I had at UMass. The choice I made to join the Film Studies Certificate program, WMUA and the Collegian allowed me to pursue a career that I otherwise would not have even been able to consider. I am certain that had I decided to attend a small private school, I would not have participated in any similar programs.

While I know it is customary to impart upon you some brilliant words of wisdom or a particularly humorous experience from my life, I will refrain from doing so. Instead, I will leave you with this quote from Jane Austen: "If things are going untowardly one month, they are sure to mend the next." Never give up and never lose faith. Nothing is impossible if you believe with all your heart.

So take a chance and do something you never would have done before. You never know where it might lead you.

Nora Drapalski was an Assistant Arts Editor for the Collegian. She can be reached at nora@dailycollegian.com.

Justin Gagnon

Don't write for The Massachusetts Daily Collegian.

If I didn't write The Collegian, I don't know what I'd be doing after I graduate. I do know that I wouldn't be doing what I love.

After high school, I had an affinity for the sciences. I started at the University of Massachusetts as a biology major on the pre-med track. It didn't take long for me to realize I was settling for something I liked, and not working at something I loved.

After learning that I could see movies for free if I wrote reviews for The Collegian, I started to do something I loved. Before I knew it, I was covering artists like Willie Nelson, AC/DC, U2 and Jay-Z. Less than a week after graduation, I'll be moving down to New Jersey to work for MLB Network alongside some of the greatest writers and athletes to ever be associated with the game of baseball – my passion.

I've known since the seventh grade that I wanted to write about America's pastime. I'm obsessed with the game and with the power of Ozzie Smith and the patience of Wily Mo Pena. I've acknowledged that I would be a much better contributor to the game off the field.

I learned a lot about work ethic and self-motivation to go from pre-med to professional baseball geek, but some of the most important things I learned were about myself.

I found what makes me happy recently, just in time before I moved on.

I remember coming to the UMass campus for the first time. In my beat-to-all-Hell Red Sox hat, I can picture how fresh the buildings looked. They were just new buildings to me at the time. Their walls and the people between them didn't matter, yet. But these were the places that would host memories that I'd cherish and/or regret for the rest of my life.

That was four years ago, and these places have soundtracks now.

Subtly dance-walking between classes to Lady Gaga. Staring at ripples in the pond for hours to Lynyrd Skynyrd. Bumpin' down Mass. Ave to Jay-Z. Editing endless grammatical mistakes in the Collegian to R.E.M.

Songs attach themselves to feelings, and it's good to remember how we used to feel about things. That's what growing up is about, really. In order to mature, you can't forget how things made you feel. And in order to appreciate happiness in its truest sense, you have to know what it feels like to be unhappy. The opportunity to be happy is always there; but you can only have it if you put your guard down, let yourself appreciate life and stop worrying about the small stuff.

I found what makes me happy recently, just in time before I moved on. I found people I want to be surrounded with, and I found that love isn't something that you can mimic from television or something you can create; its roots burrow deep into finding out what and who makes you happy.

In a school as big as UMass, it's easy to fall into the wrong crowd. It's hard to say that it's easy to be influenced negatively by your peers at UMass, because everyone is under the same influence of college itself. We're all surrounded by tough decisions and temptations, but doing what's best for you is easy with a strong foundation of people around you. It's those that convince you that you aren't as great as you are and allow those influences to drag you down who are the people that you should avoid.

Just five months ago I would have told you that I felt like I wasted a lot of time on things that led to only pain and regret. Today, I am more thankful for everything, because without it, I wouldn't be here.

If I learned one thing in college, it's to do what you love and everything else will work itself out; don't settle for anything.

After barging through hard times with that doctrine as my lifeblood, I'm leaving UMass with a sense of self and more happiness than I can ever remember. With my dream job, a beautiful and brilliant young woman's arm around my shoulders, amazing and fun friends who would do anything for me and a loving and loyal family who will always be there for me with open arms, I'll proudly receive my diploma next week.

Don't think for a second that I don't appreciate how lucky I am.

And while I'm starry-eyed looking forward, I'm going to miss the smell of soy sauce before snowstorms, the must of my dirty apartment, walking through campus at the beginning of spring and packing into PVTA buses after nights of heavy drinking and singing along with the crowd.

And I'll miss The Collegian.

Which brings me back to my first point. Don't write for The Collegian.

If you want a job in this market, you should write for the paper. But I don't want you to get a job, because that means fewer jobs for my friends and me. So fellow journalism students who don't write for the paper, keep wasting your tuition money, my friends and I will be making money because of it.

Justin Gagnon was The Collegian's Arts Editor. He can be reached jegagnon15@gmail.com.

David Brinch

I've never really been into philosophy, but there is one quote that I try to live by: "Character is higher than intellect; a great soul will be strong to live as well as think."

In mine and Ralph Waldo Emerson's opinions, it doesn't really matter how you do in a particular class that determines how intelligent you are, or if you know what is going on in Libya or how many people died in the tornadoes in Alabama. I am not trying to be insensitive, but what I try to see in people are the thousands of moral fibers woven together that make up a person's spirit.

I walked into The Massachusetts Daily Collegian four years ago, a student from out-of-state who knew almost no one, who was eager to become a part of something while also trying to meet new people and see if I was really interested in the field of journalism. I can't even tell you how many articles I have written for this paper, or how many hours I have logged down in this windowless basement in the Campus Center.

I apologize for not sparing you a cliché about sports, since I have been the section editor for the past year.

But what I can tell you is that I feel like while I have learned things that I will hopefully take with me in the "real world," I believe that I have become a better person from the people I have worked with and the things that I have done. I have learned how to be part of a team. I apologize for not sparing you a cliché about sports, since I have been the section editor for the past year.

Working at a newspaper that prints 10,000 copies everyday takes a lot of organization and a lot of cooperation from a lot of different personalities. If you don't believe me, come check it out. But that's not a bad thing. I feel like its imperative for people to be different as long as they see a common goal that they all want to accomplish. I have also learned that above all, being a person that can communicate with others and that can give positive reinforcement in a leadership role will warrant positive results as well as more respect.

Face it: people don't like being told that they suck. Even if they do suck, having a sense of humor about it and building people back up will get you better results. While most of my close friends were not involved with the Collegian, I must say that I have met some pretty interesting people who have opened my eyes to a lot of different perspectives about a ton of different issues.

I'm not really sure if I want to go into journalism, but I know that my time spent at the Collegian has been well worth it. I also know that the relationships I have made with teachers, co-workers and my staff have been beneficial not only on a professional level, but on a personal one.

I want to thank everyone involved with The Collegian, the athletes and the coaches and the media relations people who I have had the pleasure with working with and getting to know, along with my family, friends, classmates and roommates from Keno. You all mean the world to me. Lastly, I want to thank the people who pick up the paper and actually read it. I hardly believe that I am more intelligent then the average human being. But what I can say is that I value mine as well as other people's character above all else, and hope that it has become more well-built these past four years.

David Brinch was The Collegian's Sports Editor. He can be reached at dbrinch@student.umass.edu.

Chelsea Whitton

When it was my turn I asked the adviser, "I'm really sorry but I have to leave, could you direct me to where the journalism program meets?" Upon answer, I ran out of there and then was immediately placed in the program. I'm thankful for this everyday. I truly have found my heart for writing.

I've had 13 roommates, had a residence under a friend's bed for a couple weeks in Greenough, moved three times in one semester and currently live in a Jewish organization owned apartment as a Christian. My time here has been unconventional and anything but boring and yet I believe couldn't have gotten more out of it than I did.

This is the one of the hardest times I've had writing a piece of work for The Massachusetts Daily Collegian. It contains the most edits and word changes I've made in any column or story. It involves not interviewing people much more articulate than I, students at protests or poetry readings, creeping people out while photographing them or sometimes infuriating readers of the Editorial and Opinion page (all of whom have all been quite enjoyable by the way). Instead, I'm having a little sit down, a one-on-one with my memories and my appreciation for my time here with the Collegian and University of Massachusetts. For this time only its me reminiscing, typing everything that comes to mind on my scotch taped laptop, as I sit in the W.E.B. DuBois Library for one of the last times watching the sun set over the mountains.

After all, I wanted to go to UMass specifically for the journalism program and the paper.

I knew writing was supposed to be part of my life, so I went to college intending to learn just that – how to report and write. I've gained a peace in knowing that I can take my wacky interests, which vary from finding out why whales breach out of the water to how igneous basaltic lava flows can be found all over the valley (once an ocean), to how to write a news story in a half-hour. I couldn't focus on any one thing and along with this came the major that didn't require having the skills to do so. It makes sense that journalism found me.

In July 2008 I made a phone call to the admissions office of UMass that surely saved me from continuing attending a life of misery at a private college in Newport, R.I. I wasn't getting anything out of, and would leave me with a large sum of debt. As someone who knows the salary of a writer – that just wasn't happening.

So with the phone call to admissions, I informed them I planned on attending as a sophomore in the fall. At transfer orientation I found that I was placed not in the journalism program but in the environmental science program (my second choice). I thought to myself, this could work, there's more money in it. But as I sat in the office waiting my turn to sign up for classes, I was panicking on the inside – I knew where I had to be. After all, I wanted to go to UMass specifically for the journalism program and the paper.

I've had a residence under a friend's bed for a couple weeks in Greenough, moved three times in one semester and currently live in a Jewish organization owned apartment as a Christian. My time here has been unconventional and anything but boring and yet I believe couldn't have gotten more out of it than I did.

What am I going to miss? I won't miss being broke most of the time, but I'm going to miss the nature out here in Amherst – as I'm moving towards Boston. I'm going to miss seeing friends and getting to know so many life-changing people. I'm going to miss begging people to write for Ed/Op. I'm probably going to lose my eye for AP style and I'm not going to have the whole "I'm a fiery redhead, write me 750 words in an hour or I hurt you vibe" anymore.

My involvement with both the Collegian and Navigators Ministries are two things that kept my life "scotch taped" together at college. They kept me motivated, gave me peace in knowing I was contributing towards society and community. Writing and editing for the Collegian has been the experience of a lifetime, in only the two years I was involved. I couldn't have asked for a better organization to be a part of. Also, hiding out at the paper in between classes was a safe haven that only a select few of us get to experience, with all its basement glory – so I'm glad for that too. I'm just really glad for all of it.

Chelsea Whitton was an assistant editorial and opinion editor. She can be reached at chelsea.whitton@gmail.com.

THE MASSACHUSETTS DAILY COLLEGIAN

ARTS & LIVING

TUESDAY, MAY 3, 2011 "Good luck exploring the infinite abyss." - Andrew Lareyman, "Garden State" ARTS@DAILYCOLLEGIAN.COM

WWJW: What would Jesus wear?

S. P. SULLIVAN/COLLEGIAN

The Collegian's own Andrew Sheridan models the "I love Jesus" boxer briefs from New York Designer Jason Sutherland, founder of the company "Piss & Vinegar." Their line of "I Love..." underwear also includes "Buddah," "Girls " and "Boys," with a style to suit any wearer. The iconic undies are all about humor and self expression.

By Andrew Sheridan
Collegian Staff

(Editor's note: This story was originally published on January 17, 2010.)

These days, symbols of faith seem to be in high fashion. From religious pendants and "What Would Jesus Do?" bracelets, to crucifix tattoos and Buddhist symbols, style is very important for those who believe. But while just about anyone can sport a Star of David around their neck, not every man has the cojones to rock their faith where it really counts – in their pants.

"I Love Jesus" boxer briefs are the latest incarnation of fashion's holiest trend. The briefs were created by New York designer Jason Sutherland, the founder of the underwear company Piss & Vinegar. In their company tagline, Piss & Vinegar asks, "Do you think you have enough?" For the consummate consumer of religious iconography, the answer is a resounding "no." Piss & Vinegar's newest line is called "I Love..." and for the first time, it allows men to really show where their loyalties lie. While the "I Love Girls" and "I Love Boys" shorts make a statement that should be apparent by the time the pants come off, Sutherland anchors the line with the "Jesus" and "Buddha" models, intended for those who want to hide their shame but not their religious beliefs.

"Piss & Vinegar is about living from the heart, making sure you personally push yourself to do everything you can to find the energy needed to be something and more," said Sutherland in a recent interview. Sutherland is a pioneer in the industry, doing to boxers and briefs what Hot Topic has done for t-shirts.

While he does see the humor in his over-the-top designs, Sutherland uses iconic figures for a purpose and wants his customers to be able to express themselves genuinely.

Right away, I was intrigued by the idea of expressing myself through religious underwear. I couldn't help but wonder, would it serve as a reminder, sort of a "WWJD" meets Fruit of the Loom, or would it simply keep my equipment warm? I decided to do an experiment: I would wear the Jesus briefs twice, with one day spent as piously as possible, and the other spent being evil. What would having the Lamb of God strapped to my groin do to my luck, and to my conscience? I aimed to find out.

The first morning of the experiment was a Sunday, and I put on the sacred shorts right under my Sunday best. The first thing that struck me was that they were, in fact, quite nice briefs. I have always been a boxers man, and the tighty-whities got me a bit closer to the Host than I would have liked, but the material – 95 percent Pima cotton – was very high caliber. Emblazoned brightly with "I heart Jesus," the flaming Sacred Heart replaced the standard Western love emblem and made quite a bold fashion statement.

Upon arriving at my church, I was informed that the children's message I had been roped into participating in had been called off. Someone lost the script, so I didn't have to do a thing. I chalked that up to a win for the man with God in his pants, and sat back and listened to the day's sermon.

From there, the day went well, rounded out with a visit to my grandmother's house and other chores of a family man. I wasn't sure if I felt good because of my lucky charm or because I was playing Mr. Nice Guy, but seeing the tortured face of Jesus every time I unzipped was certainly startling. The Bethlehem briefs had been supportive so far, but the test was far from over.

The next day, with underpants freshly folded, I suited up and headed out first thing in the morning for a full day of shameless debauchery. First thing on the agenda was to get some liquor in me, so I headed into town with a couple of friends to hit up a bar. My luck was sour right off the bat, as the bar we picked gouged me on mediocre beer and put a serious dent in my deviance budget.

Next, I hopped on the subway in Boston, trying to cheat the system by using an illegally acquired discount T pass. Once again I was foiled, as a pair of undercover Massachusetts Bay Transportation Authority officers grabbed me on my way in and cited me for fare evasion. Did the underpants know? Were they working against me somehow?

Undeterred, I continued my trek and headed to Chinatown to meet up with a girl who staunchly claimed that her middle name was, in fact, "danger." My omnipotent shorts must have known my intentions with this young lady were impious, because my luck stayed bad. Lunch was a series of lousy dishes and hot oil burns, but I wasn't about to lose faith just yet.

Just as I was getting the feeling that God's judgment had me by the balls, my underpants gambit finally paid dividends. Back at "Ms. Danger's" apartment I was finally able to see the light: The briefs' most important feature is that they're hilarious. I wouldn't usually be happy if a woman laughed when I took off my pants, but in this case I made an exception. The holy yet comical shorts ended up on the floor for a good long while.

By the time I got home, the verdict was in: Jesus wanted me to be good. Sporting an image of the Son of God while trying to get laid falls into the category of desecration of the Host, and I seem to have paid for my transgression. However, there is something to be said for making a statement, expressing how you feel no matter who sees it. And to those who are offended, remember: God gave us the free will to choose. Don't get your undies in a bundle.

Pokemon is back in 'Black'

By Nick O'Malley
Collegian Staff

(Editor's note: This story was originally published on March 31, 2011.)

Under all of its layers of Pikachu mascots, card games and television shows of a boy that hasn't aged at all in 14 years, the Pokemon franchise has consistently remained a well-designed, finely-balanced role-playing game.

With the advent of Wi-Fi multiplayer battles, the franchise has now produced one of the best and most popular metagames in the market. That's not saying much, though, since its only tangible competition comes in MMORPG form.

However, such discussion, no matter how well-deserved, about the game's battle mechanics and metagame in a diluted market is ignoring the No. 1 reason that 22-year-old college seniors still play a game that popular culture will continue to ridicule them for playing.

"Pokémon" is video game crack.

All other things aside, "Pokémon Black" is another installment of the franchise that millions will continue to purchase as long as it continues to churn out 100-plus new characters every time it bumps up a generation.

Fortunately, "Pokémon Black" and "Pokémon White" do more than that. The latest installments, now in Generation V of the franchise, don't try to change the formula too much. Instead, B/W makes a solid amount of key, substantial changes while still maintaining that same infrastructure that has brought the series this far.

The intrinsic question, though, as it is with every "Pokémon" game is still: "Why should I buy this version over any of the others?" This is especially important for people that already own a version of the game.

While my counterpart focuses on the plot points and gameplay features that round out the game, here we're going to look at the key changes that make B/W different from the rest of the franchise.

A new, unique 150

Every new generation of "Pokémon" games has flaunted a new set of new Pokémon to draw in new players. However, what a lot of the games boil down to is ending up with a lot of familiar Pokémon in your party that you know are good and roll through the games with the same Alakazam and Gyarados you've been using since you were 9-years-old.

B/W, though are the first games completely devoted to a new set of Pokémon, meaning that no Pokémon from previous versions will appear until the Pokedex's national mode is activated once the main storyline has been completed. This is an enormous factor in a number of areas, the first being that caves no longer involve fighting 15 Zubats and Geodudes in a row.

The lack of older Pokémon means that there's a limited pool of Pokémon that you'll encounter throughout the main story mode, meaning that more Pokémon will be featured more often. What this means is that there are fewer "trash" Pokémon that you catch and hide in Box 1 for all of eternity.

Even the normal-type dog and dark-type cat encountered 15 feet away from the protagonist's house are seen later on in the game. The latter is even used by one of the Elite Four.

Another feature of the new Pokémon is a better type balance, with the rarer Bug, Steel and Dark types getting more legitimate representatives. As opposed to other versions, especially "Pokémon Sapphire" and "Pokémon Ruby," there are fewer normal Rattata and Spearow types and more of the "holy crap what the hell is this" types. Entering the game, I had my eye on the trash bag, candle, ice cream, dark hydra and giant construction worker Pokémon. The candle and construction worker ones have panned out wonderfully.

TMs are reusable

A major change in item uses comes in the form of technical machines (TMs) which can now be used as many times as you want, like hidden machines (HMs). This ends the days of hoarding TMs you get early on to save for Pokémon you'll get later.

Due to these changes, TMs now play a much larger role in the game. Rather than relying on an individual Pokémon's moveset, players can focus more on type setups for their teams and statistics. The reusability factor also means that moves can be swapped in and out for certain battles.

Drastic shift in story

This is something that my counterpart will go into further detail about, but the fact that there has been a seismic shift in the plot from the rival and gym leaders to the Team Rocket equivalent (the vaguely Crusades/PETA-themed Team Plasma) of the game. The story ventures from kiddy plot to JRPG plot at times, but it makes for a completely different plot experience and it's really a fresh change for the games.

Whether or not you should buy this game really comes down to whether you're looking for something new in Pokémon or something refreshing. If you haven't played since the Red/Blue/Yellow era and want something similar, you should shoot for "Pokémon SoulSilver" or "Pokémon HeartGold." If you want something new, B/W is the freshest re-visioning of the game that the franchise has ever seen.

Nick O'Malley can be reached at nomalley@student.umass.edu.

' Pokemon White' gets it right

By Andrew Sheridan
Collegian Staff

(Editor's note: This story was originally published on March 31, 2011.)

As someone who has followed the Pokemon series with a nerdy loyalty over the span of its life, I have been concerned for some time that the franchise has been resting on its laurels. It is always a gamble to tamper with a winning formula, but after 13 years and 16 handheld games, their cookie-cutter layout had grown stale. Racing your rival to beat eight gym leaders and become the league champion, fighting off a greedy gang of poke-thieves along the way, and running into Zubats in every last cave was getting old. It needed more than a few new species thrown on the heap to breathe new life into it.

Enter Black & White. The names refer not only to the franchise overhaul they represent, but also the questions of moral ambiguity that permeate the game. For the first time ever the entire concept of forcing Pokemon to fight for our amusement is called into question. Is the main character a friend and ally of his pokepartners, or simply an elemental-themed Michael Vick?

This question lies at the heart of the game. It shifts the focus away from fighting gym leaders and puts it on Team Plasma, a morally questionable group who seek to free these creatures from the clutches of self-serving humans. The NPCs feel more like co-habitants of the world than set pieces standing in your way, and the characters that could be described as "rivals" have their own problems to deal with besides one-upping you.

Shortly after breathing a sigh of relief for not having to come up with an insulting, vulgar name for yet another rival, I got a visit from the hometown professor, there to present me with my first Pokémon. No, they haven't come up with a better Pokémon delivery system, but hey, this time it's a woman! It's always good to have more active female characters, and this one has daddy issues, making things even more interesting.

Once the plot elements have fallen into place, it's time to get down to the real meat of the game: combat. As Nick already mentioned, until you beat the main story you cannot encounter any Pokémon from previous games, and this new 150 and change are a definite new breed. Not only are many of the type combinations and abilities new, but the statistics layout of the Pokémon have changed as well.

To start, there is now a clearer gap between the fast and the slow. Whereas a high speed used to be a given among powerful Pokémon (unless they were rock or steel-type), that is no longer the case. Brawlers such as the psychic Pokémon Reuniclus have speeds so low that in order to use them in their lineup a player has to take speed into account. Low speed can be used as a strategic advantage, but only by players who are paying attention. This and other trends in stats seem to be aimed at people who enjoy the strategy aspect of the games and want more options.

Trying to get off of the beaten path, the designers have come up with some seriously creative creatures. Examples include Eelektross, an electric eel with no weaknesses, and Darmanitan, a fire-type beast that transforms into a psychic statue at low levels of heath. You can also find Pokémon based on anteaters, chandeliers, kami spirits and even ice cream cones.

There is of course the occasional throwaway, such as useless rodent Pokémon in the fields and rock Pokemon haunting the caves, but as a whole the level of inventiveness is high.

As for the version-specific features, the main selling point for White Version is the White Forest, a heavily wooded area accessible only after defeating the Pokémon league. Black has Black City, a comparable area with buildings and trainers, but no wild Pokémon.

The layout and population of the forest will change depending on how many days it takes the player to reach the forest, so those who are tempted to mess with the DS's internal calendar should be wary. Doing so could leave your forest barren of life. Playing the game normally, however, and connecting to other games using the wireless feature, results in a forest that is plush with tall grass and water features. These are home to an unprecedented 30 version-exclusive Pokémon species, all from previous generation.

Other White-only species include the bald eagle Pokémon Braviary, the mitosis-based Solosis family and the storm god Thundurus.

When improved layout and interface are taken into account, Pokémon Black & White represent a fresh start for the series. Taking everything that fans love about turn-based cockfighting and changing up most of the stale elements, the franchise that took the 90s by storm feels new and interesting. Nintendo has succeeded where George Lucas and Coca Cola failed; they took a classic, and made it new.

Andrew Sheridan can be reached at asher01@student.umass.edu.

Anastasio, Phish still phresh after 25 years

By Ben Silverman
Collegian Correspondent

(Editor's note: This story was originally published on October 25, 2010)

UMass hasn't looked or felt like this since 1995, when Phish last played here. Thousands of fans gathered outside the Mullins Center to try to buy, trade and sell Phish tickets before the show began. A dreadlocked family of four stood together with a sign that read: "Who's got our Saturday tickets?" A grown man stood, crying in the box office after losing his tickets, and not being able to get any more. A young Hampshire student waited eagerly at the front of the line after arriving at noon to buy an original poster and t-shirt.

At least 15 minutes before Phish even came onstage, thousands of audience members stood peacefully, eyes closed and smiling, nodding their heads to the invisible, but present energy that they were collectively experiencing. Phish refers to this energy as the "vibration of life," the steady buzz of seven beats per second that energize you…for the rest of the evening." When Phish played the Mullins Center in 1994, guitarist Trey Anastasio took a break in a song to explain the "vibration of life," adding that "you gotta be careful with this stuff… it's powerful stuff." Whether it is coincidental that seven beats per second equals 420 beats per minute is still unknown.

About an hour after the show was scheduled to begin, guitarist Trey Anastasio, bassist Mike Gordon, keyboardist Page McConnell and drummer Jon Fishman made their way to the stage, greeted with uproarious rejoicing, laughter, applause, and the shouting of nicknames and song titles. Trey scratched a few sounds out of his guitar, Fishman loosely followed him, and the rest of the band gradually joined in with the upbeat, chirpy chord progression of "Meatstick," which segued into Fishman drumming the introduction to "Party Time," a new song that he wrote for their 2009 album "Joy." It was a festive, simple, even silly song of boisterous drums, organ, and the repeating line "Party Time! Party Time!" Perhaps they played it because of UMass' party school reputation; more likely, it was to let us all know we were in for a party all weekend.

As soon as it ended, Phish dove into more familiar territory with "Golgi Apparatus," written by Anastasio in eighth grade. A short, energetic gem of a composition, "Golgi" has been a crowd pleaser since its 1986 debut. Next came "Kill Devil Falls," a new, simple, rock-based song that Phish has insisted on playing frequently over the past year.

Next up was "Tweezer," an old classic, as if to say "sorry for all the new stuff!" Debuting twenty years ago, "Tweezer" is a simple, pentatonic-based riff that evolves into a lengthy jam, often reaching abstract, atonal points at peaks. After the crooning, loungejazzy "Lawn Boy," sung by McConnell, a speedy, bluegrass tune, "Sparkle," and a furious and punk rock "Big Black Furry Creature From Mars," came Phish's famous rendition of "Hold Your Head Up," featuring Trey on drums, and Fishman on vocals.

Next came a rare moment, surely one that will go down in "phishtory." Fishman, famous for playing not only drums, but also the Electrolux vacuum cleaner, played a vacuum solo over Syd Barret's "Love You," using the hose of the cleaner as a mouthpiece, while changing the size of the opening of his mouth to alter the pitch. After a few self-deprecating remarks he made about the abrasive sound of his vacuum and annoying nature of his solos, he sat back down at the drums.

Trey picked his guitar back up and began "Possum," causing the audience to whip out their tickets (which have a painting of an ugly possum) and wave them around while chanting the lyrics. The "Possum" jam lasted five energetic minutes, but never climaxed quite as powerfully as it has in the past (listen to the August 17 version for an example). The set ended with "Tweezer Reprise" with lyrics from "Meatstick" substituted in.

After a 15-minute break, the lights dimmed for the second set, and the quartet once again took their places on the stage. Noise poured out of the stage and filled the room with the bubbling, murky wall of sound that could only mean "Down With Disease" is first up. An old favorite, "Down With Disease" is a funky rock tune with an extended, meandering jam, which rocked nicely for a few minutes, but never quite found its energy last night, as it has in the past. Any concerns about Phish's energy quickly subsided when they began "My Friend, My Friend," a delicately constructed piece that begins as a triumphant, classical sounding piece suitable for an action movie soundtrack. It continued into an unsettling, dark segment, possibly referring to Shakespeare's Macbeth.

A few more songs passed, including a notably high energy "Maze," and an always appreciated "Piper," but it wasn't until "Harry Hood," an extensive, complexly arranged classic, that the audience knew the night would end in glory. After a long, palette-cleansing jam, Phish segued into the familiar intro arpeggio to "You Enjoy Myself," arguably the band's most beloved and interesting composition. Through several tightly composed sections, a choreographed trampoline dance, and a fiery jam, "YEM" ended with the usual vocal jam, an eerie, improvised a cappella that finished with piercing, unison screams, then faded to nothing. Night one was over.

Night two began with "ACDC Bag," which confirmed the predictions of the audience, who had been expecting it as the opener all day. Phish moved into "Camel Walk," another eagerly awaited and predicted early set piece, but shocked the crowd by segueing into "Divided Sky," an old, emotional, and incredibly precise composition followed by an intricately structured jam with a wailing, sustained solo.

More beloved pieces followed, including the simmering, Latin-influenced "Stash," "Fee" (sung through a megaphone), and the new, multifaceted progressive rock composition, "Time Turns Elastic," which took Phish fans a year to learn to embrace and enjoy. Next was "Cavern," an anthemic celebration that convinced the audience the set was closing until the opening doodles of "Run Like An Antelope" let the crowd know there was still more life in this set. Starting with a loosely arranged instrumental introduction. "Antelope" suddenly begins its jam with a jagged crescendo of distorted chords, and launches into a building minor jam, which peaked with pure energy and cacophony before ending on a dime and reverting to the original chords.

"Set the gear shift for the high gear of your soul! You gotta run like an antelope… Out of control!" was what Trey left the Mullins Center with before the set break.

Set two began more modestly, with simpler, more standard rock songs. While the songs were less imaginative than the previous set's, the following jams did not disappoint. It wasn't until "The Lizards", a long masterpiece that explored the history of the mythical land of "Gamehenge," that the set took off.

More high energy tunes followed, and the show ended with the long-awaited "David Bowie," which mixed tightly composed jazz with improvised heavy metal shredding, climaxing in the biggest peak of the tour. The encore of "Chalkdust Torture," a blisteringly intense song about the woes and stresses of education, served to remind UMass that after all, it is a school night, and it's time to get some sleep. The "Chalkdust" jam sealed the deal on this show's place in history, and left fans deeply satisfied and ready to download their copy of the show to cherish for years to come.

Ben Silverman can be reached at bsilverm@student.umass.edu.

Last October, Phish played two sold out shows in two nights at the Mullins Center.

ATKINS FARMS
Country Market

Let Atkins Bakery create a beautiful custom decorated cake for your next special occasion.

Made from scratch, and baked fresh, we use only natural ingredients and the results are a consistent, moist and delicious cake frosted with real buttercream icing. We can even do photo cakes with a memorable picture of the graduate, or decorate with school colors.

Atkins Flower Shop has beautiful corsages and boutonnieres for proms or formals, centerpieces for graduation parties, presentation bouquets for the graduates and congratulations balloons.

I the DC
VIDEO CONTEST

$200 cash prize for the winning video!

- Winning video to be posted on the front page of UMassDining.com and UMass Dining Facebook page
- Must be submitted by May 13th at 5:00pm
- Entries should include: Name, e-mail address, cell number

VIDEO REQUIREMENTS:
- 1-2 minutes in length
- Creative, informative and exciting
- Original
- Must explain why you love the Dining Commons

Ok future movie directors, here's your chance to tell us why you love the Dining Commons. Submit a video that tells us your story.

ENTRIES SHOULD BE SENT TO:
Christopher Howland
669 North Pleasant Street · Amherst, MA 01003

UMASS DINING UMassAmherst
umassdining.com
facebook.com/UMassDining

Videos submitted become the property of UMass Dining Services. By Submitting a video in this contest, the entrant consents to its use in any and all marketing campaigns by UMass Dining.

MARIA MISHKOVA / COLLEGIAN

In a conference matchup against Dayton, senior guard Anthony Gurley drives to the hoop. Gurley dropped 19 of his 31 points against Rider in the second half.

UM tops 24-point deficit

COMEBACK from page 10

Riley's comic book-hero half keyed the comeback, as his 3-pointers in the second half helped spark the rally, none more important than the one at the 7:41 mark which tied the game.

In addition to Riley's contributions off of the bench was redshirt sophomore Matt Hill, who was brought in to help shut down Rider's Mike Ringgold, who was a key part of the Broncs' big first half. Hill only showed up in the score sheet with three rebounds, but Kellogg sang his praises after the game for his role in the comeback.

Well, that happened

A combination of clunky play by the Minutemen and sharp execution out of the gates for the Broncs dictated a bleak first half for the Minutemen. Of course, Rider going 7-for-14 from the 3-point line didn't hurt them either.

UMass scored the opening points of the season, but from there, stumbled out of the gate to the tune of an 8-0 Broncs' run. The run quickly turned into a 17-6 lead, as the Minutemen went 2-for-7 from the floor and failed to slow down a Broncs attack which seemed two gears ahead as the teams hit the floor.

"We were just getting outplayed. We knew that, too," Gurley said. "We had to step our level of intensity up in the second half and just come out and play better defense as well."

UMass' shooting woes were only compounded by early turnovers leading to a slew of fast break points for the Broncs. Rider scored 11 points off turnovers in the first half while UMass struggled to jumpstart its offense out of the half court.

The Broncs worked the Minutemen in the paint early on, out-rebounding them, 21-13, with a 14-8 edge in points scored inside. Senior forward Mike Ringgold led the way on the scoreboard and the glass with 13 points and seven boards in the first half.

Gurley was the only bright spot early on. After an initial stumble by the offense to an 8-2 deficit, Gurley scored the next 11 point to bring it back to 20-17 with 9:15 left before fading out, along with the rest of the offense. The Minutemen scored only seven points for the rest of the opening half.

Nick O'Malley can be reached at nomalley@student.umass.edu.

Gillette Stadium to be home

FBS from page 10

I think, is going to be here at Gillette Stadium."

Involvement in the FBS will require UMass to average an attendance of 15,000 fans per home game. McGuirk Stadium, the home field of UMass football since 1965, holds 17,000 fans at full capacity.

Although McCutcheon did not rule out the possibility of playing a home game at McGuirk Stadium in the 2012 season, he does believe it is unlikely without renovations to the current facilities.

"To compete adequately at the FBS level, we need to have adequate training facilities on campus," said McCutcheon. "That will be the focus of our fundraising efforts over the next several years. By the 2014 season, we hope to have in place on campus a new training facility for football that will be on par with anybody in the conference and several across the country."

The deal to make Foxboro the Minutemen's new football home was made with Kraft, who said he is just as interested in benefiting UMass as profiting himself.

"Obviously, if we attract crowds similar to [those that] would go to an NFL game, that would work out well for everybody," said Kraft. "That's why we're doing this. To try to help UMass become big time, without the University having to invest in the capital assets to be able to play big time."

McCutcheon added, "We need to sell tickets, we need to generate more income from sponsorships and we need to schedule smart with our [non-]conference games and generate income revenue from guarantees and those are really the primary income sources that will make this [work]."

UMass will begin playing a full MAC schedule in 2012, but will be ineligible for a conference title or bowl consideration until 2013. It will also not be eligible for postseason play during the 2011 season.

Currently, the MAC has five different bowl agreements through the 2013 season in The Little Caesar's Pizza Bowl, GoDaddy.com Bowl, uDrove Humanitarian Bowl, BBVA Compass Bowl, Ticket City Bowl (2012) and the New Mexico Bowl (2013).

The MAC also has a national television contract with ESPN that requires a minimum of 15 regular-season games be played in addition to the MAC Football Championship Game.

With the addition of UMass, the MAC has 14 members in its football conference.

UMass will be required to schedule eight games against conference opponents, including six games inside its division and two games outside of it. According to Steinbrecher, divisional alignments have not been determined yet, but will be discussed at the league's "spring meetings" at the end of May.

As part of the agreement, UMass will schedule four games for men's and women's basketball against MAC opponents.

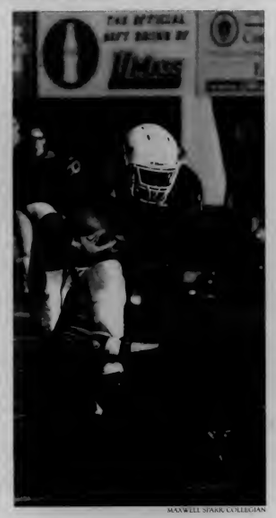
UMass will play its 11-game regular season schedule in 2011. The potential is now open to add another game against an FBS foe but, according to McCutcheon, it is unlikely it will happen this late in the offseason.

As part of the NCAA requirements, UMass will increase its number of football scholarships from 63 to 85. According to Title IX, that means more scholarships will need to be given towards women's athletic programs.

Holub is confident that, eventually, the move will end with the university spending less funds from its general budget to support athletics.

"Obviously, we get more revenue from the MAC than the CAA, so we're doing things on a comparative basis," said Holub. "What things will look like in five years in the conference that we're in and what things are going to look like in five years in the MAC. Doing that comparison, we feel that [with this move] we will be contributing less from campus funds to athletics than we do now."

Dan Gigliotti can be reached at dgigliot@student.umass.edu.



MAXWELL SHAW/COLLEGIAN

UMass halfback John Griffin stiff arms a defender on his way to positive yardage.

Valiant effort by Minutemen

MICHIGAN from page 10

Griffin fumble to take a 21-17 lead into the intermission.

"That was a big swing in the game, obviously score-wise and from us potentially being in the lead at halftime to being down," Morris said. "So certainly it affected the game but we had our shots in the second half and weren't able to overcome it."

The Minutemen never led again as the Wolverines tacked on two more touchdowns in the third quarter to make it 28 unanswered points. After falling into an 18-point hole on two occasions in the second half, however, UMass clawed its way back into the contest with a late surge.

With 5:15 remaining in the game, Havens found wide receiver Julian Talley for a 5-yard score to cut the deficit to 30-42. After a failed two-point conversion, the Minutemen special teams blocked a Will Hagerup punt to take over in Michigan territory.

Havens found tight end Andrew Krevis for his second touchdown of the day on a 7-yard pass to reduce the Wolverines lead to 42-37. With 2:05 remaining and only one timeout at its disposal, UMass went for an onside kick with the hopes of getting another chance to pull off the upset. Butthe onside attempt by kicker Caleb Violette went out of bounds to give the possession to the Wolverines, who picked up a first down to run out the clock.

With the win, Michigan hands the Minutemen their first loss of the season as they move to 2-1.

UMass looks to rebound when it returns to action next week at Stony Brook at 6 p.m. on Saturday.

Jay Asser can be reached at jasser@student.umass.edu.

Summer at BSU

Fab. Fast. Fun.

Classes run during the day, evening & online.
Ten-Week Summer Session ..... May 23 to August 9

THIS COMIC WILL NOT BE FUNNY By Jhorgy

TOAST AND TEA By Sarah Zuraw

I'M SORRY TO TELL YOU THIS SARAH BUT...
ACCORDING TO QUANTUM MECHANICS THERE'S A CHANCE THAT THIS GLASS OF ORANGE JUICE COULD FALL RIGHT THROUGH THIS TABLE.
EVEN THOUGH THE ATOM IS MOSTLY EMPTY SPACE, IT IS THE ELECTROMAGNETIC FIELD OF THE ORBITING ELECTRON THAT PREVENTS THEM FROM PASSING THROUGH EACH OTHER. IN OTHER WORDS, THE GLASS WILL NEVER FALL.
HA!!!

HOROSCOPES

aquarius Jan. 20-Feb. 18
Acorn tops can be used as shot glasses, BUT NEVER TWO AT A TIME!

pisces Feb. 19-Mar. 20
Your positive affirmation for the day: There ain't nothin' sexier than an Apocalypse.

aries Mar. 21-Apr. 19
You are a prime suspect in the inhuman, brutal slaying of hip-hop. Getting a lawyer would be the best plan, just like Wheezy did.

taurus Apr. 20-May 20
You look like a pretty cool hipster. Do you wanna see my vintage lunchbox and soup can collection?

gemini May 21-Jun. 21
Beware of the spider web. Little green ghouls weave them, and place a spider there to keep guard.

cancer Jun. 22-Jul. 22
Jactation is a fantastic word that you should use in every conversation you have today.

leo Jul. 23-Aug. 22
All your friends are still perplexed by your insistence that popcorn is not a food, but rather, a lifestyle choice.

virgo Aug. 23-Sept. 22
The convenience stores on campus sell pong balls and solo cups, which 78% of students agree is pretty ironic.

libra Sept. 23-Oct. 22
Ill Gangsta Cheez Poptarts is a terrible name for a rapper. It makes you sound like a sick urban snack food. You putz.

scorpio Oct. 23-Nov. 21
You will find either a $20 bill in your pocket today, or a decomposing toe in your bed. The Fates are unclear.

sagittarius Nov. 22-Dec. 21
Superman may be super, but Clark Kent objectifies women. Be super.

capricorn Dec. 22-Jan. 19
Percy Bysshe Shelley laughs from his throne in hell at the emo lyrics you try to pass off as poetry.

Football makes move to FBS, joining MAC

By Dan Gigliotti
Collegian Staff

(Editor's note: This story was originally published on April 21, 2001.)

The University of Massachusetts officially announced its move to the Football Bowl Subdivision during a press conference at Gillette Stadium on Wednesday.

UMass, which previously played for the Football Championship Subdivision in the Colonial Athletic Association, joins the Mid-American Conference on a transitional basis for football only.

The announcement was made by Chancellor Robert C. Holub, who expressed how the move would gain UMass greater national recognition.

"This move advances our aspirations to assume our rightful place in the upper echelon of national public research universities," said Holub. "Our move to the top of the college football world now becomes part of our overall move towards ever greater national prominence."

Joined by UMass Athletic Director John McCutcheon, MAC Commissioner Jon A. Steinbrecher and Robert Kraft, owner of the New England Patriots and Gillette Stadium, Holub discussed the financial and logistic ramifications of the move.

"We have looked at all aspects of this transition to the FBS very carefully and we believe, after an initial investment and, in a very few years, we will be using less funds from our general budget to support athletics than we do now," said Holub.

Over the next two years, UMass will be in a transitional period and its full membership with the MAC will be contingent on home attendance and its adherence to scholarship and scheduling requirements, said Steinbrecher.

According to McCutcheon, UMass will play its entire home schedule during the 2012 and 2013 seasons at Gillette Stadium.

"We do want to do some improvements in our stadium on campus," said McCutcheon. "There's a chance that we could move one or two games back there when it's in a position where we can host [Division] 1-A caliber games. The primary home for UMass football for the foreseeable future,

UMass quarterback Kyle Havens avoids a Michigan defender. Havens went 22-for-29 for 222 yards and two touchdowns in the loss.

UM falls short at Michigan

By Jay Asser

(Editor's note: This story was originally published on September 20, 2010.)

Ann Arbor, Mich. — Though the Massachusetts football team was able to keep up with a tradition-rich Michigan program until the final whistle blew, it was the big plays ultimately cost it an upset victory at the Big House on Saturday.

The Wolverines created just enough separation to hold off the Minutemen (2-1, 1-0 Colonial Athletic Association), 42-37, in front of 110,187 fans, easily breaking the record for the highest-attended UMass sporting event ever.

Quarterback Denard Robinson led the high-powered Michigan (3-0) offense with 241 yards in the air and 120 on the ground while accounting for three touchdowns. The early Heisman Trophy favorite completed just 10-of-14 passes, but connected for big plays with wide receiver Darryl Stonum, who caught three passes for 121 yards and two scores.

In the running game, it was tailback Michael Shaw who gashed the Minutemen defense to the tune of 126 yards and three touchdowns on 12 carries, an average of 10.5 yards per rush.

"In the second half, they really emphasized the inside zone play and gave the ball to the back," UMass coach Kevin Morris said after the game. "I guess one thing to take away was that we held Robinson to only about 350 yards, if that's a bonus, I don't if it is."

UMass pounded the rock as well, with its combination of tailbacks in Jonathan Hernandez and John Griffin. Hernandez got the bulk of the work, rushing for 118 yards and two scores on 26 carries, while Griffin accounted for 99 yards on 17 chances himself.

Minutemen quarterback Kyle Havens was efficient throughout the game, going 22-for-29 passing for 222 yards and two touchdowns. The senior drove the ball consistently against the Wolverines defense and made only one mistake on his first interception of the season.

Though the overwhelming expectation was that Michigan would easily take care of UMass, Havens had a strong belief in his team heading into the contest.

"I worked hard, we all worked hard and you don't work hard to lose," Havens said. "I don't want to lose, I know everybody thought they would come in and crush us. Never crossed my mind, I told you guys from the beginning. I thought we were going to win this game."

Despite the hostile atmosphere, UMass came out of the gate strong and seized a 17-7 lead after a 9-yard run by Hernandez with one minute, 17 seconds remaining in the first half. That's when momentum shifted as Michigan answered with a quick-strike 66-yard touchdown from Robinson to Stonum, followed by another score by Stonum after a

Riley snipes in opening victory

By Nick O'Malley
Collegian Staff

(Editor's note: This story was originally published on November 14, 2010.)

It doesn't matter who you are, 20 points is a big halftime deficit. But for a young team trying to come into its own that only put up 24 first half points, it's a colossal one.

So when Freddie Riley sank one of his six 3-pointers on the night to tie the score at 55-55, the Mullins Center crowd that started heading home in the first half started going insane.

Luckily for the home crowd, the team that went into the locker room after the first half was nowhere to be seen for the rest of the game. UMass almost doubled its first half output, outscoring Rider, 53-22, in the second half, including a 40-9 run, en route to a 77-67 victory.

"I was 37-years-old when the game started, and I think I'm 45 now," UMass coach Derek Kellogg said. "I said to the team, I don't think I've ever been more disappointed in the first half... And then, after some great halftime adjustments of let's play hard and compete, that I've never been so proud of a team that they never gave in, [they had] wherewithal to keep on playing."

Riley, after a frost-bitten 1-for-5 shooting performance from behind the arc, became the Human Torch off the bench, tearing away at the double-digit second half lead with a flurry of second half treys. Riley was 4-for-6 in the second half and finished with a career-high 26 points on the night. The sophomore guard logged 28 minutes in the game off the bench.

"I just don't think about missing," Riley said about his shooting. "I just feel like every shot I put up is going to go in."

Riley was the spark, but senior Anthony Gurley was the closer, putting UMass up 57-55 at the seven minute, six second mark. Gurley, the one glimmer of hope in the first half, was solid in the second, putting up 19 of his game-high 31 points in the last 15 minutes, including his 1000th career point, right as the Minutemen took the lead.

For much of the second half, both Gurley and Riley had more second half points than the entire Rider side. The duo combined for 59 of UMass' 77 points.

"It was like night and day," Gurley said of the difference between the halves. "The feeling at halftime was pretty crappy. I mean, we dug ourselves into a big hole. The feeling after the game? I was very proud. I was very proud to be a part of this team. I was proud of the way that we fought back. I think that shows that we're very resilient."

Just as key as Gurley and Riley's contributions though, was the defense. After giving up 45 first half points, the Minutemen surrendered just 10 second half points by the time they had tied the game.

"The defense wasn't nearly as good as it was in the second half," Gurley said. "I thought that anyone that checked into the game in the second half just fed off the intensity of everyone on the floor."

The turnovers and untimely fouls which tripped up the Minutemen in the opening half began to befuddle the Broncs. After scoring 40 seconds into the half, Rider remained scoreless until a Justin Robinson jumper at the 13:44 mark.

The second half momentum seemed to be swinging when Gurley converted an and-one and Gary Correia made a diving steal before calling timeout to give the Mullins Center crowd its first big spark of the night.

Minutes later, when Sampson Carter drove to the lane, missed and scored on his own rebound, UMass had brought the score within nine and the crowd back into the game.

Minutewomen earn tournament bid after loss

By Pete Vasquez
Collegian Staff

(Editor's note: This story was originally published on November 9, 2010.)

Despite losing to Stanford, 2-1, on Tuesday afternoon in the NCAA Tournament play-in game at Garber Field, the Massachusetts field hockey team was chosen by the selection committee to play Maryland in the first round.

The Terrapins (19-1) are the No. 1 seed overall and will play the Minutewomen this Saturday at 11:30 a.m.

Against the Cardinals, sophomore Kelsey Lloyd scored off a penalty corner with 26 minutes and 33 seconds remaining in the game to break a 1-1 tie to propel Stanford past UMass in what was a highly-contested battle.

Players were diving constantly, trying to keep plays alive and to prevent shots from reaching their destination. The UMass goal, which came three minutes before the half, was achieved with the help of a full-out stretch by freshman Molly MacDonnell to keep the ball in the circle. The ball made its way to the center of the circle, in front of the net, where sophomore Kim Young was able to tip it in to knot the score at one. Freshman Lindsay Bowman got the assist.

"I had said to [the players] at the beginning of this game that this could be the last game of their careers on this field for this season," UMass coach Justine Sowry said. "We definitely saw their energy, the desperation and the commitment to be there for each other and to try to get the ball back on their sticks. I was really happy, unfortunately we were unable to put another one in the goal."

Stanford used an abundance of overhead passes, utilizing sophomore defender Becky Dru, to keep UMass on its heels as the Cardinals seized command of the first half, despite being tied with the Minutewomen in shots and goals scored at halftime.

"The first half Stanford really took control of the game and surprised us a little bit," Sowry said. "But I'm really pleased with the way our team came out in the second half and the attack that we generated. It really shows the determination and character of this team to fight until the very end."

UMass played with desperation for the final 35 minutes, especially after Lloyd's score. However, the consistent pressure never broke the Stanford defense and the best chance for the Minutewomen to even the match came with under four minutes to play.

Senior captain Katie Kelly broke away from a defender and raced to the circle with Bowman following her. After a give-and-go pass, Kelly could not quite get a full stick on Bowman's pass at the goal. Kelly kept possession and tried to restart the play but the Cardinals eventually smacked the ball out of the circle.

As each second ticked off the clock, the Stanford bench was up and jumping with every sequence of events. The UMass bench sat nervously, sharing a blanket and hoping for another opportunity to tie the game. It never came.

When the clock expired, senior Makaela Potts dropped to her knees, knowing this could have been her last game in a Minutewomen uniform.

The loss was made tougher with one of the UMass players missing from the forward line. Sophomore Nicole Cordero was left to watch her teammates on television after being struck in the neck by a penalty corner shot on Oct. 29 at West Chester. She is currently in Pennsylvania recovering.

Fans held up signs with her number clearly visible and numerous players could be seen with a "23" marked on their leg or hand.

"We've pretty much dedicated the rest of the season to [Cordero]," Sowry said. "She's a fabulous team member and it's really hard for her not being with the team right now. In terms of what she does on the field, it's undeniable with her work ethic and her heart and courage. Cordero, we're thinking of her everyday."

The freshmen, as they have done all season, stepped in to fill Cordero's spot admirably. Sowry knows how worthwhile it was having her three seniors around to mentor the 10 new players.

"We had 10 freshmen coming and we had three seniors who really led by example and have worked hard to get this team back on track," Sowry said. "I'm just really pleased with the maturity of our team, especially with how young it is, on many levels. It's just been an incredible season."
